

Agenda Item: 06.02.02
Source: Paul Dwyer, Vodafone
Title: UMTS Service Principles
Document for: Discussion, Decision

x UMTS Service Principles

x.1 3GPP SA

X	WG1: Services
	WG2: Architecture
	WG3: Security
	WG4: Codec
	WG5: Network Management

x.2 Linked work items

All service related work items in WG1

x.3 Justification

The goal of standardisation with respect to services in UMTS is to define a framework within which proprietary services can be created and supported on all networks. Service principles are an agreed set of goals and ideas which provide the complete high level view of services in UMTS. The requirements upon which more detailed standardisation work is based are defined by the service principles.

x.4 Service Aspects

Goals for service provision and the basic framework for providing services are outlined.

x.5 MMI-Aspects

High level standardisation requirements for MMI are stated

x.6 Charging Aspects

High level requirements related to charging are stated.

x.7 Security Aspects

High level requirements for security are stated.

x.8 Impacts

Affects:	USIM	ME	NW	Others
Yes	X	X	X	
No				
Don't know				

x.9 Expected Output and Timescales (to be updated at each plenary)

This work item is for release 1999

x.10 Work item rapporteurs

Paul Dwyer

x.11 Responsible TSGs

Prime : TSG SA WG1
