

Title:	Proposed correction to IMS CRs
Source:	3
Document for:	Approval
Agenda Item:	6.1
Attachments:	None

Introduction

The CRs in S3-030601 and S3-030602 to TS 33.203 that correct the usage of RES were approved at SA3#30. It is noted that the CRs missed correcting one reference of Draft-ietf-sip-digest-aka-01 to RFC 3310. It is proposed to reject S3-030601 and S3-030602 and accept S3-030799 and S3-030800 instead. The only difference between the documents is the following change

“~~Draft-ietf-sip-digest-aka-01~~[RFC 3310](#) [17] specifies ~~how~~~~the fields~~ to populate ~~the~~~~corresponding~~ parameters of ~~an~~ authentication~~one~~ challenge.”

Conclusion

For the reasons given above, it is proposed to reject S3-030601 and S3-030602 and accept S3-030799 and S3-030800 instead.
