4.4.8 Requirements on reference point Ua

The generic requirements for reference point Ua are:

- The UE and the NAF shall be able to secure the reference point Ua using the GBA-based shared secret;

NOTE 1: The exact method of securing the reference point Ua depends on the application protocol used over reference point Ua.

- The NAF shall be able to indicate to the UE that GBA-based shared secret should be used;

- The NAF shall be able to indicate to the UE that the current shared secret has expired and the UE should use newer shared secret with the NAF.
