Title: Response to liaison statement T1-00006 from TSG-SA4

Document for: Information

Contact: dan.fox@eu.anritsu.com (Tel: +44 1582 433357)

This liaison statement is drafted in response to S4-000084R from TSG-SA4.

TSG-T1 would like to re-iterate the scope of TS 34.108. The document is created to contain items relating to test environment, test conditions, equipment configurations, set-up procedures, and so on, that are common between many test cases.

Where these environments etc. are specific to a test case, or a small group of test cases, we would suggest that they are maintained in the relevant test specification.

With this in mind, we propose the following areas could be included in 34.108:

The signalling required for establishing speech calls for Audio Tests, however, basic requirements need to be provided by TSG-SA4. The current Generic set-up procedures in TS 34.108 might be used as a starting point.

Items that are specific to audio tests (environment, test configurations, equipment specifications etc.) would be better kept in 26.132. TSG-SA4 may use environments, configurations etc. from 34.108 as a baseline.

TSG-T1 also invites SA4 to propose an additional baseline if they think it could be useful in a wider range of test cases.
