Title: TSG T Work program

Document for: **Information and Discussion**

Agenda Item:

The attached report is a print out of the TSG-T Work program as recorded in the 3GPP Database.

The database is at present based on the ETSI WPM system. It is however, expected to be adapted to better suit 3GPP requirement in the near future.

The Report includes "Work Item description" type work items and "specification" (e.g. TS and TR) type Work items.
The Status codes are of no importance and should be ignored.

The Schedule Milestone Phase names may be changed to suit the work, for example a "Work Item description" type work item may have the following milestones:
    Creation of WI by WG/TB
    Start of work
    Report
    Stage 1 specification
    Stage 2 specification
    Stage 2 specification
    Completion

The target and achieved dates field allow for automatic flags to be raised if not met.

The Project codes may be used to link "Work Item Description" type work items with the resulting Specification work items and specifications impacted by CRs resulting from the WI.

The Work Item Reference identifies the WI type, the responsible TSG, the responsible WG and either a short abbreviation of the WI title or the specification number if and when allocated. e.g. DTS/TSCN-0124004 identifies a Draft TS from TSG CN WG1 specification 24.008

The system enables various styles of reports to be produced, the Full Report is produced here.

The system also enables WWW access to database work program reports, WWW queries may be tailored to suit TSGs and WGs requirements.

TSG-T is invited to check the information within the report and advise the 3GPP support group of any discrepancies.

USIM and IC Card Requirements
(UMTS 21.11)

Edition:
Lead Body:
Cover date:

Rapporteur: Maringer, Günter
Tel: +49 228 936 1249   **Fax:**   +49 228 936 1257
E-mail: guenter.maringer@t-mobil.de
Technical editor: Doig, Ian
Database record last update: 20/03/1999

Scope and field of application:
This document defines the functional characteristics and requirements of the USIM (User Service Identity Module) and the IC card for UMTS (UICC).
These are derived from the service and security requirements defined in UMTS 22.01 [2] and 22.00 [1]. The USIM is a UMTS application on an IC
card. It inter-operates with a UMTS terminal and provides access to UMTS services.
This document is intended to serve as a basis for the specification of the USIM, the UICC, and the interface to the UMTS terminal.

Title:
Requirements for the Support of Data Services in UMTS
(UMTS 21.04).

Scope and field of application:
  This document identifies some of the work required in TSG T for the support of UMTS. The objective of this Technical Report draft report is to provide SMG
input on UMTS data services with
  a view to establishing some detailed work for SMG4 on UMTS. This Technical Report identifies UMTS changes required for the support of fax, store
  and forward fax, applet fax end to end, applet fax with interworking, data services (modem access, internet protocol, services of internet
  protocol), SMS (GSM SMS, UMTS SMS base level, UMTS SMS advanced, SMS routing), and Cell broadcast.

Title:
Technical Specification Group (TSG) Terminal
Messaging (Multimedia Messaging Service); Stage 2/3

Scope and field of application:
The present document specifies the Multimedia Messaging Service stage 2/3.
Protocols (delivery control)
Control function between Multimedia Messaging Entities Including fragmentation of long messages
Message Formats (Structure of the message)
Fragmenting of messages CSAs part of the Protocols
MS Capabilities negotiation
As part of the Protocols e.g. Memory, Display, ...
Signalling to update capabilities
As part of the Protocols
Alerting the MMSC (when MS becomes available)
Notification (MMSC >> MS)
Size of message, Content-type, sender, classification of message content
Downloading
Downloading should support different transfer mechanisms
Partial content downloading
Choice of the user and the MS to download parts
Compatibility
To existent store and forward services e.g. SMS
Bearer between the MS and the MMSC
Optimise the bearer between the MS and the MMSC.
Addressing
As agreed in UMTS
Charging
