Title: Draft update of Rel-6 Work Item Description for OSA Stage 3 (Update of CN#22-approved NP-030558)
Agenda item: 9.7
Document for: DECISION

joint-API-group (Parlay, ETSI Project OSA, 3GPP TSG_CN WG5) N5-040121
Meeting #26, Atlanta, GA, USA, 16-20 February 2004

Summary of changes:

1. After the closing the clean-up process of OSA Requirements from SA1 (22.127) not progressed by 3GPP Members in CN5 (Stage 3) it is proposed to:

merge the "Static" part of the WID section **10 Expected Output and Time scale** with the "Dynamic" part i.e. the complimentary section **15 Work Tasks under this Building Block**
2. CN#23 minutes: the mapping TR does not belong to this CN5 WID, it belongs to the CN1 PRESENCE WID. It was clarified that the task belongs to CN5 but the WID is owned by CN1. The TR needs to be removed from this WID, as it is covered in the CN1 Presence WID.

Work Item Description

Title: OSA Stage 3

1 3GPP Work Area

	Radio Access
X	Core Network
X	Services
	Terminals

2 Linked work items

- Feature-level WI ID#15010 Rel-6 OSA enhancements
- Feature-level WI ID# 31028 Rel-6 Presence Service Enhancements (CN1)

3 Justification

The Open Service Access (OSA) enables service application developers to make use of network functionality through open, standardised, secure, extensible and scalable interfaces. Applications see the network functionality offered to them as a set of Service Capability Features (SCFs) in the OSA API. These SCFs provide access to the network capabilities on which the application developers can rely when designing their applications. The OSA API is independent of where or which network capabilities are implemented in the network, and of vendor specific solutions and programming languages.

A secure OSA API is a key enabler for the Virtual Home Environment (VHE) system concept, which requires users to be consistently presented with the same personalised services in whatever network and terminal, subject to the capabilities of both.

4 Objective

Within the organisation of 3GPP TSG CN (Core Network), CN5 is in charge of the stage 3 specifications of the OSA API. The functionality provided by the API is defined in terms of requirements and their impact in the overall architecture defined by 3GPP, as shown in the following figure:

The figure above depicts the main OSA workflow; besides, co-ordination with other 3GPP groups will be necessary in some areas, some of which have already been identified, like Charging (SA5) and Security (SA3). Additionally CN5 is actively involved in liaisons of different natures with related bodies and fora, with the objective to ensure that there is a single API specified for the whole development community. In its joint work with these external bodies CN5 ensure that the 3GPP working process is respected – i.e. input from them is translated in terms of requirements and contributed to SA1.

5 Service Aspects

The OSA API stage 3 specifications will be aligned with the service provisioning architecture specified by 3GPP TSG SA (SA1 and SA2). As such, it will enable the provision of 3rd Party services for UMTS.

6 MMI-Aspects

None.

7 Charging Aspects

The OSA API stage 3 specifications will satisfy the charging requirements from SA1 and SA2 which will be found in 22.127.

8 Security Aspects

The OSA API stage 3 specifications will satisfy the security requirements from SA1 and SA2 in co-operation with SA3.

14 Classification of the WI (if known)

	Feature (go to 14a)
X	Building Block (go to 14b)
	Work Task (go to 14c)

15 — Work Tasks under this Building Block

In correspondence with the Service Aspects defined for Rel 6, the OSA Stage 3 Building Block contains the following work tasks under the feature level Rel 6 OSA enhancements:

ID	Name	WG	Finishing	% Completed	Impacted-specs	Notes
15026	Multi-Media-Messaging function	N5	06/2004	50%	29.198, 29.998	N5#25: No progress reflected in the specs.
15028	Policy management extensions	N5	03/2004 12/2003	90%	29.198, 29.998	N5#25: Good progress 40%->90%
15029	Presence and Availability Management for 3GPP IMS (from the PRESNC-WI)	N5	TBD	80%	29.198, 29.998	N5#25: Completion-09/04; consistent with CN1 delayed-Rel-6 completion- TS completion in 12/2003 & TR completion in 09/2004. Good progress 40%->80%
15032	OSA-interfaces at different levels of abstractions (Parlay X-Web services)	N5	06/2004	90%	29.199	N5#25: Draft TS 29.199 v100 submitted to CN#22 for Information. Will be submitted for CN#24 approval in 06/2004.
15033	Introduction of migration support mechanism	N5	12/2003	100%	29.198, 29.998	N5#25: completed
15034	User Profile	N5	03/2004	0%	29.198, 29.998	N5#24&25: Still Pending input from SA1/2.
15036	Framework Function for Federation	N5	12/2003	100%	29.198, 29.998	N5#25: completed
