**Title: MRP Input to 3GPP Program Planning**

**Agenda item:**

**Document for:**

Decision	
Discussion	<b>X</b>
Information	

### **1. Introduction**

The 3GPP MRPs have initiated planning meetings prior to each 3GPP OP and PCG meeting, to better coordinate and consolidate common views on global market requirements for the development and enhancement of 3GPP programs. Where consensus views on 3GPP program requirements are developed, the MRPs shall share these views with the Ops to better link the technical standards development process with evolving global market requirements as responsible 3GPP partners.

### **2. Comments**

The GSA, GSMA, UMTS Forum and UWCC MRPs provide the following input to 3GPP regarding key program requirements in year 2000 as follows:

- a) 3GPP needs to complete technical specifications to meet market timing requirements and license conditions globally
- b) The MRPs support the T1 proposal to include EDGE/GPRS within 3GPP programs, as part of globalizing these ETSI/GSM programs
- c) All-IP solutions remain a high priority, and 3GPP is encouraged to strengthen the links with the global IP community.

### **3. Conclusion**

The MRPS of 3GPP commit to playing an active role in all 3GPP programs to ensure successful completion of standards requirements as well as the necessary deployment planning and market input to standards evolution.

# Program Input to 3GPP ...

**3GPP MRPs**

*GSA, GSM Association,  
UMTS Forum, UWCC*

- Complete 3GPP technical specifications to meet global market timing and license conditions
- MRPs support proposal to include EDGE/GPRS, as part of globalizing ETSI/GSM program elements
- All IP solutions maintain high priority and 3GPP is encouraged to strengthen links with global IP community
