

# Proposal for the Release 2000 Features, Building Blocks and Work Tasks

## Version 1.0

[N1 comments on this version are in revision marks, cells highlighted in red indicate the WI proposals which N1 intends to raise to the plenary.](#)

### Introduction

This document proposes the 3GPP **Work Plan for Release 2000**. It describes the complete set of *R00 work items* and classify them as *feature*, *building block* and *work task*: a *feature* is subdivided into *building blocks* and a *building block* is subdivided into *work tasks* (definitions are given bellow).

This tree structure is established to ease the monitoring of the 3GPP work progress for R00, and to make explicit the purpose of the work assigned to one WG in the global system.

**The aim of this Work Plan is to lead in a consistent way the activities of the full 3GPP community for the Release 2000.**

### Background

Short explanations of the concepts used in this document are provided bellow (extracted from SP-000109).

**Feature:** New, or substantially enhanced functionality which represents added value to the existing system. A feature should normally embody an improved service to the customer and / or increased revenue generation potential to the supplier.

**Building block:** A sub-division of a feature, representing a set of technical functionality which would generally be expected to reside in a single system element, i.e. a single physical or logical entity or a single protocol. Building blocks may be "re-usable" - that is, a single building block may be common to two or more features.

**Work task:** A sub-division of a building block, representing a self-contained, well-scoped and well-scheduled item of work. A work task will almost certainly be the responsibility of a single Working Group. The output of a work task is the creation of one or more new Technical Specifications (or Reports) and / or Change Requests to existing TSs / TRs.

**Work item:** A generic term to refer to a given *feature*, *building block* or *work task*, i.e. all the individual elements of the table bellow should soon become work items (some work tasks may however be grouped within a single WI). A full description of the term *work item* can be found in the 3GPP Working Procedures, as detailed in the annex (the complete 3GPP Working Procedures can be found at [http://www.3gpp.org/About\\_3GPP/3gpp\\_wp.zip](http://www.3gpp.org/About_3GPP/3gpp_wp.zip)).

### Status of review by the 3GPP Groups

This version encompasses the comments made by the Working Groups and the TSGs on version 0.9 or v.0.10. Most of the 3GPP WGs have reviewed the proposal, as shown in the following table.

Group	has reviewed v.0.9 or 0.10	comments
SA	No	This version will be reviewed at TSG SA#8.
<b>S1 (services)</b>	<b>No</b>	<b>No time allocated at last meeting</b>
S2 (architecture)	Yes	Originator of the proposal
S3 (security)	Yes	in tdoc S3-000305
S4 (Codecs)	partly	No meeting held. Comments from the chairman included.
S5 (OAM)	Yes	e-mail reviewed.
CN	Yes	in tdoc S2-000670, encompassing comments from N1 and N4.
N1 (CC, MM)	Yes	in tdoc S2-000670
N2 (CAP)	partly	e-mail discussion. No formal output.
N3 (IW)	Yes	in tdoc N3-000199
N4 (MAP)	Yes	in tdoc S2-000670
N5 (VHE)	partly	e-mail discussion. No formal output.
T	No	This version will be reviewed at TSG T#8.
T1 (testing UE)	No (not needed yet?)	
T2 (capabilities)	partly	No meeting held. Comments from the chairman included.
<b>T3 (USIM)</b>	<b>No</b>	
RAN	partly	Comments from F. Courau included according to decisions taken at RAN#7. This version will be reviewed at RAN#8.
R1 (radio phy.)	No	

R2 (RR)	Yes	R2-000836, R2-000938
R3 (Iu, Iur, Iub)	Yes	R3-001224
R4 (RF, BS testing)	No (not needed yet?)	

### Next steps

#### *Approval of Work Items:*

All the Work Items identified in this document have to be officially approved. Several Work Items can nevertheless be approved using a single work item coversheet (in particular, several work tasks can be approved together).

#### *Transfer from MS Word to MS Project:*

This MS Word version has limited capabilities in term of readability. For this reason, the content of this document will be soon transferred to MS Project 98. This software will also provide some useful tools, like filtering the information to present only the work items to be fulfilled by a given (set of) WGs.

### Contacts for comments

For sake of sharing the work load, S2 has established 12 Inter-Group Co-ordination (**IGCs**). Each IGC has the responsibility to monitor the work progress on a number of work items, and each work item is monitored by a single IGC. In case of inconsistencies, comments should be made to the responsible IGC's convenor. The e-mail addresses of all the IGC convenors are provided bellow.

<b>IGC</b>	<i>Convenor</i>	convenor's e-mail address
<b>1. Bearer and Access Stratum</b>	<i>François Courau,</i> Alcatel	francois.courau@alcatel.fr

## Proposal for the Features, Building Blocks and Work Tasks of R00

<i>Inter Group Co-ordination</i>	<i>Feature</i>	<i>Building block</i>	<i>WG: work task expected completion date</i>
<b>Bearer and Access Stratum</b>	<b>Evolution of transport</b>	<b>Evolution of the Transport in the UTRAN<sup>1</sup></b>	<b>R3:</b> Introduction of an option allowing an IP transport in the UTRAN <b>R3:</b> new RAB support (this belongs also to the RAN Improvements) <b>R3:</b> QoS optimisation for AAL2 connections
		<b>Evolution of the Transport in the CN<sup>2</sup></b> <b>* WI formulation assigned to N4</b>	?: User/signalling data transport on TCP/RTP/UDP/IP based bearers (Nb/Nc)
			?:User/signalling data transport on ATM/AAL2 bearers (Nb/Nc)
			<b>N4:</b> Separation of call and bearer control
		<b>Evolution of Bearers in the CN<sup>3</sup></b> <b>* (Combine with above for WI)</b>	<b>N4:</b> Evolution of the bearers inside the PLMN
	<b>N3:</b> Evolution of the bearers at the inter-working point with other types of networks		
	<b>Radio Interface Improvement</b>	<b>Hybrid ARQ (Feasibility study)</b>	<b>R2; R3</b>
		<b>Improved usage of CCTrCH (Feasibility study)</b>	<b>R2; R3</b>
		<b>High Speed DL packet Access 5feasibility study)</b>	<b>R2; R3</b>
		<b>Terminal Power Saving (Feasibility study)</b>	<b>R2; R3</b>
		<b>USTS (Feasibility Study)</b>	<b>R2; R3</b>
	<b>Low Chip Rate TDD<sup>4</sup></b>	<b>To be further investigated</b>	<b>R1; R2; R3; R4</b>
	<b>RAN improvement<sup>5</sup></b>	<b>RRM Support over Iub and Iur</b>	<b>R3:</b> RRM optimisation (5 issues)
<b>Node B synchronisation for TDD<sup>6</sup></b>		<b>R3:</b> Node B synchronisation for TDD	

<sup>1</sup> These building blocks are considered as independent.

<sup>2</sup> These building blocks are considered as independent.

<sup>3</sup> Transport and bearers are distinguished in this proposal because it is assumed that Bearer can be provided using different transport techniques as they shall fit the requirement in terms of QoS.

<sup>4</sup> BB and WT associated to this feature are still under discussion

<sup>5</sup> These building blocks shall be considered as independent from any features and followed as such.

<sup>6</sup> This Building block belongs also to the Radio Interface Improvements for R2 activities

		<b>Improvement of Inter-Frequency and Intersystem measurement (Feasibility study)</b>	<b>R2; R3</b>
		<b>BTS classification</b>	<b>R2; R4:</b> At least, two aspects have to be covered: FDD BTS and TTD BTS
<b>QoS</b>	<b>Real Time QoS for packet services including VoIP</b>	<b>HOs: maintenance of real-time QoS while moving between cells in the PLMN including inter-SGSN change and SRNS relocation or possibly other mechanisms (S2 writes WI Desc)</b>	<b>S2:</b> End-to-End multimedia QoS negotiation, <i>Sept</i> <b>N1:</b> End-to-End multimedia QoS negotiation <i>Nov</i>
			New or enhanced packet handling procedures to maintain real-time and non real-time services throughout packet session: <b>S2:</b> on QoS architecture and GPRS improvements, <i>July</i> RAN3 handover for real time services in PS domain, <i>August</i> <b>N1:</b> on GPRS GMM and SM aspects, <i>July</i> <b>N4:</b> on GTP aspects, <i>July</i> <b>N1:</b> changes to QoS re-negotiation procedure, <i>August</i>
			<b>S2, N3:</b> Study external QoS negotiation mechanisms, and as a result propose QoS negotiation and reservation mechanisms to be used in UMTS, <i>July</i>
		<b>End-to-end/UMTS reservation and (re-)negotiation of QoS parameters (S2 writes WI Desc)</b>	<b>S2, N3:</b> Define interactions between external QoS negotiation and reservation mechanisms and UMTS QoS negotiation and reservation mechanisms <i>August</i>
			<b>N1:</b> Possible new code points in QoS IE from external networks, <i>Oct</i> <b>N1:</b> inclusion of UMTS QoS Architecture (23.107) new point codes, <i>August-July</i>
			<b>S5, N3, S2, S1:</b> Consider issues related to charging for end-to-end QoS, <i>Sept.</i>
			<b>S2, N1, N3, T2:</b> Mapping between UMTS QoS attributes and the attributes used by external QoS mechanisms, <i>Nov.</i>
			<b>SMG2, SMG7:</b> GERAN QoS Aspects, <i>Dec.?</i>
			<b>N4:</b> Impacts on QoS profile anticipated, <i>July</i>
			<b>N3:</b> For Packet as per real time QoS, see “Real Time QoS for packet services” above.
<b>Non-real time QoS Enhancements for packet services</b>	<b>Mapping of overall end to end QoS in each new interface (S2 writes WI Desc)</b>	<b>N4:</b> Impacts on CN protocols (e.g., GTP, MAP) anticipated, <i>Sept.</i> <b>N3:</b> impact on interworking over GTP e.g. PPP, <i>August</i>	
	<b>Evolution of maximum SDU size (S2 writes WI Desc)</b>	<b>N4:</b> Impacts on QoS profile anticipated, <i>July</i> <b>N3:</b> For Packet as per real time QoS, see “Real Time QoS for packet services” above.	
	<b>End-to-end (re-)negotiation of QoS parameters (S2 writes WI Desc)</b>	<b>N4:</b> Impacts on CN protocols (e.g., GTP, MAP) anticipated, <i>Sept.</i> <b>N3:</b> impact on interworking over GTP e.g. PPP, <i>August</i>	
		See “Real Time QoS for packet services” above.	

		<p><b>HOs: maintenance of non real-time QoS while moving between cells in the PLMN including inter-SGSN change and SRNS relocation or possibly other mechanisms</b></p> <p>(S2 writes WI Desc)</p>	<p>New or enhanced packet handling procedures to support real-time and non real-time services, See “Real Time QoS for packet services” above.</p>
	<p><b>QoS for circuit switched services</b></p>	<p><b>HOs: support of inter-MSC change and SRNS relocation</b></p> <p>(S2 writes WI Desc)</p>	<p><b>SMG2, SMG7: GERAN QoS Aspects, <i>Dec.</i></b></p>
