

**Source:** CN2  
**Title:** CR on Rel-5 WI CAMEL 4, Composite changes for CAMEL phase 4, stage 2  
**Agenda item:** 8.3  
**Document for:** APPROVAL

---

This document contains CR on Release-5 WI CAMEL 4 that is submitted to CN#16 Plenary for approval.

Spec	CR	Rev	Doc-2nd-	Phase	Subject	Cat	Ver_C
23.078	394	1	N2-020626	Rel-5	Composite changes for CAMEL phase 4, stage 2 (TS 23.078 for Rel-5)	B	4.4.0

N2-020626 document contains CR cover page and the following attachments:

- content of the CR in the TS23078.doc
- SDL source files in 23078-500\_sdl.zip
- Change\_History.doc that lists all the individual CRs that are approved in CN2 for TS 23.078, for the WI CAMEL4

3GPP TSG CN WG2 Meeting #24  
Budapest, Hungary, 13<sup>th</sup> – 17<sup>th</sup> May 2002

N2-020626

CR-Form-v5.1

## CHANGE REQUEST

⌘ **23.078 CR 394** ⌘ rev **1** ⌘ Current version: **4.4.0** ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

**Proposed change affects:** ⌘ (U)SIM  ME/UE  Radio Access Network  Core Network

<b>Title:</b>	⌘ Composite changes for CAMEL phase 4		
<b>Source:</b>	⌘ CN2		
<b>Work item code:</b>	⌘ CAMEL4	<b>Date:</b>	⌘ 29 May 2002
<b>Category:</b>	⌘ <b>B</b>	<b>Release:</b>	⌘ Rel-5
	Use <u>one</u> of the following categories:		Use <u>one</u> of the following releases:
	<b>F</b> (correction)		2 (GSM Phase 2)
	<b>A</b> (corresponds to a correction in an earlier release)		R96 (Release 1996)
	<b>B</b> (addition of feature),		R97 (Release 1997)
	<b>C</b> (functional modification of feature)		R98 (Release 1998)
	<b>D</b> (editorial modification)		R99 (Release 1999)
	Detailed explanations of the above categories can be found in 3GPP TR 21.900.		REL-4 (Release 4)
			REL-5 (Release 5)

<b>Reason for change:</b>	⌘ Introduction of CAMEL Phase 4 (Rel-5). The present document specifies the stage 2 description for the fourth phase (see 3GPP TS 22.078) of the Customized Applications for Mobile network Enhanced Logic (CAMEL) feature which provides the mechanisms to support services of operators which are not covered by standardized GSM services even when roaming outside the HPLMN. The fourth phase of the CAMEL feature supports, in addition to the third phase of the CAMEL: <ul style="list-style-type: none"> <li>- Interactions with Optimal Routing;</li> <li>- Call Party Handling;</li> <li>- DTMF Mid call procedure for Mobile Originated and Mobile Terminating calls;</li> <li>- Inclusion of flexible tone injection;</li> <li>- Charging Notification to CSE;</li> <li>- Provision of location information of called subscriber;</li> <li>- Provide location information during ongoing call;</li> <li>- CAMEL control over MT SMS;</li> <li>- Notification of GPRS mobility management to CSE;</li> <li>- Inclusion of ODB data in Any Time Modification;</li> <li>- Enhancement of Any Time Interrogation and Provide Subscriber Information for PS Domain;</li> <li>- Reporting of IMEI (with SW version) to the CSE</li> <li>- Support of CAMEL4 subsets</li> </ul> CAMEL applicability to IP-based multimedia services is introduced in the fourth phase of the CAMEL. It is specified in 3GPP TS 23.278.  To realise the technical specification - stage 2, CN2 has worked to create the draft specification since August 2000 (as an output of CN2#12 Helsinki meeting). All the proposals to CAMEL4 and the CRs to CAMEL3 have been incorporated into this draft specification.
<b>Summary of change:</b>	⌘ This CR contains all the changes that are required for the update of CAMEL Phase 3 to CAMEL Phase 4. This CR is proposed as a replacement of the existing specification (Rel-4) to produce CAMEL4 (Rel-5) specification.

<b>Consequences if not approved:</b>	⌘	
--------------------------------------	---	--

<b>Clauses affected:</b>	⌘	All
--------------------------	---	-----

<b>Other specs affected:</b>	⌘	<input checked="" type="checkbox"/>	Other core specifications	⌘	23.008, 23.016, 23.018, 23.079, 29.002, 29.078
		<input type="checkbox"/>	Test specifications		
		<input type="checkbox"/>	O&M Specifications		

<b>Other comments:</b>	⌘	<ul style="list-style-type: none"> <li>- The content of the CR is contained in a separate document file, TS23078.doc.</li> <li>- This document was submitted for information at CN#15 Plenary. CN2 requests the approval at the CN#16 Plenary.</li> <li>- All the individual change requests that have been implemented in TS 23.078 for WI CAMEL4 are listed in a separate file, Change_History.doc.</li> </ul>
------------------------	---	--

# 3GPP TS 23.078 V5.0.0 (2002-06)

*Technical Specification*

**3rd Generation Partnership Project;  
Technical Specification Group Core Network;  
Customised Applications for Mobile network Enhanced Logic  
(CAMEL) Phase 4 - Stage 2  
(Release 5)**

---

The present document has been developed within the 3<sup>rd</sup> Generation Partnership Project (3GPP™) and may be further elaborated for the purposes of 3GPP.

The present document has not been subject to any approval process by the 3GPP Organizational Partners and shall not be implemented. This Specification is provided for future development work within 3GPP only. The Organizational Partners accept no liability for any use of this Specification. Specifications and reports for implementation of the 3GPP™ system should be obtained via the 3GPP Organizational Partners' Publications Offices.

# Contents

Foreword .....	18
1 Scope.....	19
1.1 Support of CAMEL phase 4 subsets .....	19
1.1.1 CS call handling .....	20
1.1.2 Charging notification.....	20
1.1.3 GPRS mobility management .....	21
1.1.4 CAMEL control over MT SMS .....	21
1.1.5 GPRS Any Time Interrogation.....	21
2 References.....	22
3 Definitions and abbreviations .....	25
3.1 Definitions .....	25
3.2 Abbreviations.....	27
4 Circuit switched Call Control .....	29
4.1 Architecture .....	29
4.1.1 Functional Entities used for CAMEL.....	29
4.1.2 Interfaces defined for CAMEL.....	30
4.1.2.1 HLR - VLR interface .....	30
4.1.2.2 GMSC - HLR interface.....	30
4.1.2.3 GMSC - gsmSSF interface .....	30
4.1.2.4 gsmSSF - gsmSCF interface.....	30
4.1.2.5 MSC - gsmSSF interface .....	30
4.1.2.6 gsmSCF - HLR interface .....	30
4.1.2.7 gsmSCF - gsmSRF interface .....	30
4.1.2.8 GMSC - MSC interface .....	30
4.2 Detection Points (DPs).....	30
4.2.1 Definition and description.....	30
4.2.1.1 Arming/disarming mechanism.....	31
4.2.1.2 Criteria.....	31
4.2.1.2.1 Criteria at DP Collected_Info .....	31
4.2.1.2.2 Criteria at DP Analysed_Information .....	33
4.2.1.2.2.1 General .....	33
4.2.1.2.2.2 Removal of information significant to the serving entity .....	33
4.2.1.2.2.3 Number comparison .....	34
4.2.1.2.3 Criteria at DP Route_Select_Failure.....	35
4.2.1.2.4 Criteria at DP Terminating_Attempt_Authorised .....	35
4.2.1.2.5 Criteria at DP T_Busy and T_No_Answer .....	35
4.2.1.3 Relationship.....	36
4.2.2 DP processing rules.....	36
4.3 Description of CAMEL Subscriber Data.....	37
4.3.1 Originating CAMEL Subscription Information (O-CSI) .....	37
4.3.1.1 TDP List .....	37
4.3.1.2 gsmSCF address .....	37
4.3.1.3 Service Key .....	37
4.3.1.4 Default Call Handling.....	37
4.3.1.5 DP criteria.....	37
4.3.1.6 CAMEL Capability Handling.....	37
4.3.1.7 CSI state .....	37
4.3.1.8 Notification flag.....	37
4.3.2 Dialed Service CAMEL Subscription Information (D-CSI) .....	37
4.3.2.1 DP criteria.....	38
4.3.2.2 gsmSCF address .....	38
4.3.2.3 Service Key .....	38
4.3.2.4 Default Call Handling.....	38
4.3.2.5 CAMEL Capability Handling.....	38
4.3.2.6 CSI state .....	38

4.3.2.7	Notification flag.....	38
4.3.3	Network Service CAMEL Subscription Information (N-CSI).....	38
4.3.4	Translation Information Flag CAMEL Subscription Information (TIF-CSI).....	38
4.3.4.1	Translation Information Flag.....	38
4.3.4.2	Notification flag.....	39
4.3.5	Terminating CAMEL Subscription Information (in the GMSC) (T-CSI).....	39
4.3.5.1	TDP List.....	39
4.3.5.2	gsmSCF address.....	39
4.3.5.3	Service Key.....	39
4.3.5.4	Default Call Handling.....	39
4.3.5.5	DP criteria.....	39
4.3.5.6	CAMEL Capability Handling.....	39
4.3.5.7	CSI state.....	39
4.3.5.8	Notification flag.....	39
4.3.6	VMSC Terminating CAMEL Subscription Information (VT-CSI).....	39
4.3.6.1	TDP List.....	40
4.3.6.2	gsmSCF address.....	40
4.3.6.3	Service Key.....	40
4.3.6.4	Default Call Handling.....	40
4.3.6.5	DP criteria.....	40
4.3.6.6	CAMEL Capability Handling.....	40
4.3.6.7	CSI state.....	40
4.3.6.8	Notification flag.....	40
4.3.7	Other CAMEL data.....	40
4.3.7.1	Location information/Subscriber state Interrogation.....	40
4.3.7.2	gsmSCF address list for CSI.....	41
4.4	Description of CAMEL BCSMs.....	41
4.4.1	General Handling.....	41
4.4.2	Originating Basic Call State Model (O-BCSM).....	41
4.4.2.1	Description of O-BCSM.....	41
4.4.2.1.1	Description of the call model (PICs).....	43
4.4.2.1.1.1	O_Null & Authorise_Origination_Attempt_Collect_Info.....	43
4.4.2.1.1.2	Analyse_Information.....	44
4.4.2.1.1.3	Routing.....	44
4.4.2.1.1.4	O_Alerting.....	45
4.4.2.1.1.5	O_Active.....	45
4.4.2.1.1.6	O_Exception.....	46
4.4.3	Terminating Basic Call State Model (T-BCSM).....	46
4.4.3.1	Description of T-BCSM.....	46
4.4.3.1.1	Description of the call model (PICs).....	48
4.4.3.1.1.1	T_Null.....	48
4.4.3.1.1.2	Terminating Call Handling.....	49
4.4.3.1.1.3	T_Alerting.....	49
4.4.3.1.1.4	T_Active.....	50
4.4.3.1.1.5	T_Exception.....	50
4.4.4	Rules for Implicit Disarming of Event Detection Points.....	51
4.4.5	BCSM Modelling of Call Scenarios.....	52
4.4.5.1	Mobile Originated Call.....	52
4.4.5.2	Mobile Terminated Call at the GMSC or VMSC.....	53
4.4.5.3	Call Forwarding at the GMSC or VMSC.....	53
4.4.5.4	gsmSCF Initiated Call.....	54
4.5	Procedures for CAMEL.....	55
4.5.1	Overall SDL architecture.....	55
4.5.2	Handling of mobile originated calls.....	59
4.5.2.1	Handling of mobile originated calls in the originating MSC.....	59
4.5.2.1.1	Actions of the MSC on receipt of Int_Error.....	60
4.5.2.1.2	Actions of the MSC on receipt of Int_Continue.....	61
4.5.2.1.3	Actions of the MSC on receipt of Int_Continue_With_Argument.....	61
4.5.2.1.4	Actions of the MSC on receipt of Int_Connect.....	61
4.5.2.1.5	Actions of the MSC on receipt of Int_Release_Call.....	61
4.5.2.1.6	Actions of the MSC on receipt of Int_Continue_Without_Leg2.....	61
4.5.2.1.7	Action of the MSC in procedure CAMEL_OCH_MSC_ANSWER.....	61

4.5.2.1.8	Action of the MSC in procedure CAMEL_OCH_ETC .....	61
4.5.2.1.9	Action of the MSC in procedure CAMEL_Store_Destination_Address.....	62
4.5.2.1.10	Procedure CAMEL_OCH_LEG1_MSC .....	62
4.5.2.1.11	Action of the MSC on receipt of Int_Request_Notification_Charging .....	62
4.5.2.1.12	Process CAMEL_O_CHANGE_OF_POSITION_MSC .....	62
4.5.2.2	Handling of mobile originating calls in the originating VLR.....	126
4.5.3	Retrieval of routing information.....	129
4.5.3.1	Retrieval of routing information in the GMSC .....	129
4.5.3.1.1	Action of the GMSC on receipt of Int_Release_Call.....	129
4.5.3.1.2	Action of the GMSC on receipt of Int_Error .....	129
4.5.3.1.3	Action of the GMSC on receipt of Int_Continue .....	130
4.5.3.1.4	Action of the GMSC on receipt of Int_Continue_With_Argument .....	130
4.5.3.1.5	Action of the GMSC on receipt of Int_Connect .....	130
4.5.3.1.6	Action of the GMSC on receipt of Send_Routing_Info Negative Response (in state Wait_For_Routing_Info_2).....	130
4.5.3.1.7	Action of the GMSC on receipt of Send_Routing_Info ack with MSRN (in state Wait_For_Routing_Info_2).....	131
4.5.3.1.8	Action of the GMSC on receipt of Send_Routing_Info ack with FTN (in state Wait_For_Routing_Info_2).....	131
4.5.3.1.9	Action of the GMSC on receipt of Send_Routing_Info ack with O-CSI and/or D-CSI and FTN (at state Wait_For_Routing_Info_2).....	131
4.5.3.1.10	Action of the GMSC in procedure CAMEL_MT_ETC.....	131
4.5.3.1.11	Action of the GMSC in procedure CAMEL_MT_GMSC_Notify_CF.....	131
4.5.3.1.12	Action of the GMSC on receipt of Int_Request_Notification_Charging.....	131
4.5.3.1.13	Action of the MSC on receipt of Int_Continue_Without_Leg2.....	131
4.5.3.2	Retrieval of routing information in the HLR .....	174
4.5.3.3	Handling of provide roaming number request in the VLR.....	181
4.5.4	Handling of mobile terminating calls.....	183
4.5.4.1	Handling of mobile terminating calls in the terminating VMSC.....	183
4.5.4.1.1	Action of the VMSC in procedure CAMEL_MT_VMSC_Notify_CF.....	183
4.5.4.1.2	Action of MSC on receipt of Int_Continue_Without_Leg2.....	183
4.5.4.1.3	Procedure CAMEL_ICH_LEG2_MSC .....	183
4.5.4.1.4	Action of MSC on receipt of Int_Request_Notification_Charging.....	184
4.5.4.1.5	Process CAMEL_T_CHANGE_OF_POSITION_MSC.....	184
4.5.4.2	Handling of mobile terminating calls in the VLR .....	212
4.5.5	Handling of forwarded calls.....	214
4.5.5.1	Procedure CAMEL_CF_MSC_INIT: handling of Int_Continue_With_Argument.....	214
4.5.5.2	Procedure CAMEL_CF_MSC_INIT: handling of Int_Connect.....	214
4.5.5.3	Procedure CAMEL_CF_MSC_INIT: handling of Int_Continue_Without_Leg2 .....	214
4.5.5.4	Action of the MSC in procedure CAMEL_CF_MSC_ANSWER.....	214
4.5.5.5	Action of the MSC in procedure CAMEL_CF_ETC .....	215
4.5.5.6	Action of MSC on receipt of Int_Request_Notification_Charging .....	215
4.5.6	Handling of gsmSCF initiated calls.....	250
4.5.6.1	Handling of gsmSCF initiated calls in the MSC.....	250
4.5.6.1.1	Actions of the MSC on receipt of Int_Error.....	250
4.5.6.1.2	Actions of the MSC on receipt of Int_Continue .....	250
4.5.6.1.3	Actions of the MSC on receipt of Int_Continue_With_Argument .....	250
4.5.6.1.4	Actions of the MSC on receipt of Int_Disconnect_Leg.....	250
4.5.6.1.5	Actions of the MSC on receipt of Int_Release_Call.....	250
4.5.6.2	Handling of gsmSCF initiated calls in the VLR .....	265
4.5.6.2.1	Action of the MSC on receipt of Int_Request_Notification_Charging .....	265
4.5.7	Handling of mobile calls in the gsmSSF .....	268
4.5.7.1	Call duration control.....	268
4.5.7.1.1	Information flow for call duration control .....	268
4.5.7.1.2	Audible indicators for call duration control .....	269
4.5.7.2	The gsmSCF control of e-values .....	270
4.5.7.2.1	Procedure Handle_SCI.....	270
4.5.7.2.2	Process Tsw_For_SCI.....	271
4.5.7.3	Behaviour of the gsmSSF in the process CS_gsmSSF .....	274
4.5.7.3.1	Actions of the gsmSSF on receipt of CAP_Request_Report_BCSM_Event (in the state Waiting_For_Instructions).....	274
4.5.7.3.2	Actions of the gsmSSF on receipt of CAP_Continue (in the state Waiting_For_Instructions) ....	274

4.5.7.3.3	Actions of the gsmSSF on receipt of CAP_Release_Call (in the state Monitoring) .....	274
4.5.7.3.4	Actions of the gsmSSF on receipt of Int_DP_T_Busy or Int_DP_T_No_Answer including the parameter Call Forwarded (in the state Monitoring) .....	274
4.5.7.4	Process CS_gsmSSF and procedures .....	274
4.5.7.5	Process gsmSSF_SSME_FSM and procedures .....	344
4.5.7.6	Process CSA_gsmSSF and procedures .....	347
4.5.8	Assisting case .....	369
4.5.9	Procedure CAMEL_Provide_Subscriber_Info .....	378
4.5.9.1	MS reachable .....	379
4.5.9.2	MS not reachable in the requested domain .....	379
4.5.9.2.1	Location Information requested .....	379
4.5.9.2.2	Subscriber State requested .....	379
4.5.9.3	Actions at state Wait_For_Information .....	379
4.5.9.3.1	Provide_Subscriber_Info ack .....	379
4.5.9.3.2	Provide_Subscriber_Info Negative Response .....	379
4.5.10	CAMEL specific handling of location updating and data restoration .....	380
4.5.11	Cross phase compatibility .....	381
4.5.12	Handling of North American Carrier Information .....	381
4.5.13	Handling of Int_Request_Notification_Charging at MSC .....	381
4.6	Description of information flows .....	382
4.6.1	gsmSSF to gsmSCF information flows .....	382
4.6.1.1	Activity Test ack .....	382

## Foreword

This Technical Specification (TS) has been produced by the 3<sup>rd</sup> Generation Partnership Project (3GPP).

The present document specifies the stage 2 description for the fourth phase (see 3GPP TS 22.078 [6]) of the Customized Applications for Mobile network Enhanced Logic (CAMEL) feature within the 3GPP system.

The contents of present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will then be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

---

# 1 Scope

The present document specifies the stage 2 description for the fourth phase (see 3GPP TS 22.078 [6]) of the Customized Applications for Mobile network Enhanced Logic (CAMEL) feature which provides the mechanisms to support services of operators which are not covered by standardized services even when roaming outside the HPLMN.

The CAMEL feature is a network feature and not a supplementary service. It is a tool to help the network operator to provide the subscribers with the operator specific services even when roaming outside the HPLMN.

In the present document, the GSM Service Control Function (gsmSCF) is treated as being part of the HPLMN. The regulatory environment in some countries may require the possibility that the gsmSCF and the HPLMN are controlled by different operators, and the gsmSCF and the HPLMN are therefore distinct entities.

The fourth phase of the CAMEL feature supports, in addition to the third phase of the CAMEL:

- Interactions with Optimal Routing;
- Call Party Handling;
- DTMF Mid call procedure for Mobile Originated and Mobile Terminating calls;
- Inclusion of flexible tone injection;
- Charging Notification to CSE;
- Provision of location information of called subscriber;
- Provide location information during ongoing call;
- CAMEL control over MT SMS;
- Notification of GPRS mobility management to CSE;
- Inclusion of ODB data in Any Time Modification;
- Enhancement of Any Time Interrogation and Provide Subscriber Information for PS Domain.

CAMEL applicability to IP-based multimedia services is introduced in the fourth phase of the CAMEL. It is specified in 3GPP TS 23.278 [27].

CAMEL is not applicable to Emergency Setup (TS 12), i.e., if an Emergency call is requested, then the gsmSSF shall not be invoked.

The mechanism described in the present document addresses especially the need for information exchange between the VPLMN or IPLMN and the HPLMN for support of operator specific services. Any user procedures for the control of operator specific services are outside the scope of the present document. Subscribers who have subscribed to operator specific services and therefore need the functional support of the CAMEL feature shall be marked in the HPLMN and VPLMN. In case a subscriber is marked to need CAMEL support, the appropriate procedures which provide the necessary information to the VPLMN or the HPLMN are invoked. It is possible for the HPLMN to instruct the VPLMN or IPLMN to interact with a gsmSCF which is controlled by the HPLMN.

The specification of operator specific services is outside the scope of the present document.

## 1.1 Support of CAMEL phase 4 subsets

An entity may support complete CAMEL phase 4 or, as a network option, complete CAMEL phase 3 functionality and one or more subsets of CAMEL phase 4.

The subsets of CAMEL phase 4 are the following:

- Relative to Circuit switched Call Control;
- CS call handling,

This subset contains the support of:

- Interactions with Optimal Routing;
- Call Party Handling;
- Mid call procedure for MO and MT calls;
- Inclusion of flexible tone injection;
- Provision of location information of called subscriber (Alerting phase); and
- Location information during an ongoing call (Handover DP).
- Charging notification (with CS call handling),

This subset contains the support of:

- Charging notification to the CSE.
- Relative to GPRS interworking;
- Notification of GPRS mobility management to CSE.

This subset contains the support of:

- Notification of GPRS mobility management to CSE.
- Relative to Short Message Services;
- CAMEL control over MT SMS.

This subset contains the support of:

- CAMEL control over MT SMS.
- Relative to Subscriber Location and State retrieval.
- GPRS Any Time Interrogation.

This subset contains the support of:

- Enhancement of Any Time Interrogation and Provide Subscriber Information for PS Domain.

A functional entity (VMSC, GMSC or SGSN) may support the subsets in any combination applicable for this entity; except that a functional entity supporting "Charging notification" shall support also "CS call handling". A functional entity will indicate to the HLR and/or gsmSCF all the subsets it supports.

### 1.1.1 CS call handling

This subset of CAMEL phase 4 contains the functionality specified in the following clause:

- Clause 4 "Circuit switched Call Control"; except the items related to Charging notification as defined in subclause 1.1.2 "Charging notification".

If the CAMEL phase 4 subset "CS call handling" is supported, then Clause 4 "Circuit switched Call Control" shall be supported.

This subset can be supported by the following functional entities: VMSC/VLR and GMSC.

### 1.1.2 Charging notification

This subset of CAMEL phase 4 is only applicable if the subset "CS call handling" is supported.

If the CAMEL phase 4 subset "Charging notification" is supported, then the complete clause 4 "Circuit switched Call Control" shall be supported. If a functional entity supports this subset it shall also support the "CS call handling" subset.

The items related to Charging notification are defined in clause 4 "Circuit switched Call Control". They are:

- The handling of the input signals CAP\_Request\_Notification\_Charging, Int\_Event\_Notification\_Charging, in the SDL diagrams in subclause 4.5 "Procedures for CAMEL".
- The information flows Event Notification Charging and Request Notification Charging as defined in subclause 4.6 "Description of information flows".

This subset can be supported by the following functional entities: VMSC/VLR and GMSC.

### 1.1.3 GPRS mobility management

This subset of CAMEL phase 4 contains the functionality specified in the following clause:

- Clause 9 "Mobility Management" in respect to the SGSN.

If the CAMEL phase 4 subset "GPRS mobility management" is supported, then Clause 9 "Mobility Management" in respect to the SGSN shall be supported, except those parts clearly identified in that clause as being related to VLR.

This subset can be supported by the following functional entity: SGSN.

### 1.1.4 CAMEL control over MT SMS

This subset of CAMEL phase 4 contains the functionality specified in the following clause:

- Clause 7 "Short Message Services".

If the CAMEL phase 4 subset "CAMEL control over MT SMS" is supported, then clause 7 "Short Message Services" shall be implemented.

This subset can be supported by the following entities: SGSN and VMSC/VLR.

### 1.1.5 GPRS Any Time Interrogation

This subset of CAMEL phase 4 contains the functionality specified in the following clause:

- Clause 11 "Subscriber Location and State retrieval" in respect to the SGSN.

If the CAMEL phase 4 subset "GPRS Any Time Interrogation" is supported, then Clause 11 "Subscriber Location and State retrieval" in respect to the SGSN shall be supported, except those parts clearly identified in that clause as being related to VMSC/VLR or GMLC.

This subset of CAMEL phase 4 can be supported by the following functional entity: SGSN.

## 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

## 3 Definitions and abbreviations

### 3.1 Definitions

For the purposes of the present document, the following terms and definitions apply:

**Basic Call State Model (BCSM):** BCSM provides a high-level model of GMSC- or MSC/VLR-activities required to establish and maintain communication paths for users. As such, it identifies a set of basic call activities in a GMSC or MSC/VLR and shows how these activities are joined together to process a basic call.

**Call Control Function (CCF):** CCF is the Call Control Function in the network that provides call/service processing and control (see ITU-T Recommendation Q.1224 [41]).

**Detection Points (DP):** points in processing at which notifications (to the service logic) can occur and transfer of control (to the gsmSCF) is possible are called Detection Points (DPs).

**Dialled Service CAMEL Subscription Information (D-CSI):** D-CSI identifies the subscriber as having originating CAMEL dialled services.

**Forwarding MSC:** MSC which is either an MSC invoking a standardized Call Forwarding supplementary service or Call Deflection supplementary service; or an MSC invoking a CAMEL based call forwarding service.

**Gateway MLC (GMLC):** functional entity that allows external LCS Clients to request real-time information about a Mobile Station. The information that can be requested from the GMLC is:

- location of Mobile Station

See 3GPP TS 23.271 [26] and 3GPP TS 25.305 [30] for information on the GMLC.

**Geodetic Information:** information defining the location of a mobile station, coded according to ITU-T Recommendation Q.763 [40]. The derivation of this information from other information defining the location of a mobile station is a network operator option. If an entity derives the geodetic information it shall also provide the equivalent geographical information.

**Geographical Information:** information defining the location of a mobile station, coded according to 3GPP TS 23.032 [13].

**GPRS CAMEL Subscription Information (GPRS-CSI):** GPRS-CSI identifies the subscriber as having GPRS CAMEL services.

**GPRS Dialogue:** A dialogue between the gprsSSF and the gsmSCF. A single GPRS Dialogue may consist of one or more TCAP dialogues. Only one TCAP dialogue shall exist at one point in time for one gprsDialogue.

**GPRS Service Switching Function (gprsSSF):** functional entity that interfaces the SGSN to the gsmSCF. The concept of the gprsSSF is derived from the IN SSF, but uses different triggering mechanisms because of the nature of the mobile network.

**GPRS Session:** GPRS session starts when the GPRS subscriber attaches to the GPRS data network. It ends when the GPRS subscriber detaches from the GPRS data network.

**GSM Service Control Function (gsmSCF):** functional entity that contains the CAMEL service logic to implement OSS. It interfaces with the gsmSSF, the gsmSRF, the GMLC and the HLR.

**GSM Service Switching Function (gsmSSF):** functional entity that interfaces the MSC or GMSC to the gsmSCF. The concept of the gsmSSF is derived from the IN SSF, but uses different triggering mechanisms because of the nature of the mobile network.

**GSM Specialised Resource Function (gsmSRF):** functional entity which provides various specialized resources. It interfaces with the gsmSCF and with the MSC. This entity is defined in ITU-T Recommendation Q.1224 [41] with variations defined in the present document.

**Location Information:** indicates the location of the Mobile Station. The provision of location information is independent of the MS status. As part of the location information, an indication of the age of this information may be delivered.

**Mobile Originating Short Message Service CAMEL Subscription Information (MO-SMS-CSI):** MO-SMS-CSI identifies the subscriber as having MO SMS CAMEL services. MO-SMS-CSI (CAMEL Phase 4) is identical to SMS-CSI (CAMEL Phase 3).

**Mobile Station State:** similar to **Subscriber State**, but associated only with a Mobile Station, not with a subscriber.

**Mobile Terminating Short Message Service CAMEL Subscription Information (MT-SMS-CSI):** MT-SMS-CSI identifies the subscriber as having MT SMS CAMEL services.

**Mobility Management event CAMEL Subscription Information (M-CSI):** M-CSI identifies the subscriber as having Mobility Management event notification CAMEL services.

**Mobility Management event GPRS CAMEL Subscription Information (MG-CSI):** MG-CSI identifies the GPRS subscriber as having Mobility Management event notification CAMEL services.

**NA (North American):** prefix attached to certain information items used by North American PLMNs in connection with routing a call to a preferred or dialled long distance carrier.

**Network CAMEL Service Information (N-CSI):** N-CSI identifies services offered on a per-network basis by the serving PLMN operator for all subscribers.

**Originating Basic Call State Model (O-BCSM):** originating half of the BCSM. The O-BCSM corresponds to that portion of the BCSM associated with the originating party.

**Originating CAMEL Subscription Information (O-CSI):** O-CSI identifies the subscriber as having originating CAMEL services.

**Point In Association (PIA):** PIAs identify MSC/VLR or SGSN activities associated with one or more basic association/connection states of interest to OSS service logic instances.

**Point In Call (PIC):** PICs identify MSC/VLR (GMSC) activities associated with one or more basic call/connection states of interest to OSS service logic instances.

**Service Key:** Service Key identifies to the gsmSCF the service logic. The Service Key is administered by the HPLMN, and is passed transparently by the VPLMN/IPLMN to the gsmSCF. The Service Key is a part of the T/O/VT/D/GPRS/SMS/M-CSI.

**Serving MLC:** functional entity that performs location information retrieval.

**Short Message Control Protocol (SM-CP):** Protocol between the MSC or SGSN and the MS. This protocol, which is specified in 3GPP TS 24.011 [29], is used to carry RPDU elements between the MSC or SGSN and the MS.

**Short Message Service Centre (SMSC):** also abbreviation SC is used for SMSC.

**Subscriber State:** see 3GPP TS 22.078 [6].

**Supplementary Service Notification CAMEL Subscription Information (SS-CSI):** SS-CSI identifies the subscriber as having supplementary service invocation notification CAMEL services.

**Terminating Basic Call State Model (T-BCSM):** terminating half of the BCSM. The T-BCSM corresponds to that portion of the BCSM associated with the terminating party.

**Terminating CAMEL Subscription Information (in the GMSC) (T-CSI):** T-CSI identifies the subscriber as having terminating CAMEL services in the GMSC.

**VMSC Terminating CAMEL Subscription Information (VT-CSI):** VT-CSI identifies the subscriber as having terminating CAMEL services in the VMSC.

**Translation Information Flag (TIF-CSI):** TIF-CSI is a flag in the CAMEL subscriber data which indicates that when the subscriber registers a forwarded-to number, that the HLR shall not attempt to perform any translation, number format checks, prohibited FTN checks, call barring checks.

**USSD CAMEL Subscription Information (U-CSI):** U-CSI identifies a set of subscriber specific mappings from a USSD service code to a gsmSCF address.

**USSD General CAMEL Service Information (UG-CSI):** UG-CSI globally identifies a set of mappings from a USSD service code to a gsmSCF address. The global mapping applies to all HPLMN subscribers. If, for a particular service code, both U-CSI and UG-CSI are applicable then the U-CSI shall take precedence.

## 3.2 Abbreviations

Abbreviations used in the present document are listed in 3GPP TR 21.905 [1].

For the purposes of the present document, the following abbreviations apply:

BCSM	Basic Call State Model
CAMEL	Customized Applications for Mobile network Enhanced Logic
DP	Detection Point
DTN	Deflected To Number
D-CSI	Dialled Services CAMEL Subscription Information
EDP	Event Detection Point
FTN	Forwarded To Number
GMLC	Gateway MLC
GMSC	Gateway MSC
GPRS	General Packet Radio Service
gprsSSF	GPRS Service Switching Function
GPRS-CSI	GPRS CAMEL Subscription Information
gsmSCF	GSM Service Control Function
gsmSRF	GSM Specialised Resource Function
gsmSSF	GSM Service Switching Function
HLR	Home Location Register
HPLMN	Home PLMN
ICA	Initiate Call Attempt
IE	Information Element
IF	Information Flow
IP	Intelligent Peripheral
IPLMN	Interrogating PLMN
LCS	Location Services
LSA	Localised Service Area
M-CSI	Mobility Management event Notification CAMEL Subscription Information
MF	Mobile Forwarding
MG-CSI	Mobility Management event Notification GPRS CAMEL Subscription Information
MLC	Mobile Location Centre
MO	Mobile Originating
MO-SMS-CSI	Mobile Originated Short Message Service CAMEL Subscription Information
MSC	Mobile service Switching Centre
MT	Mobile Terminating
MT	Mobile Terminating in GMSC
MT-SMS-CSI	Mobile Terminating Short Message Service CAMEL Subscription Information
N-CSI	Network CAMEL Service Information
NA	North American
NNI	Network Node Interface
O-BCSM	Originating Basic Call State Model
O-CSI	Originating CAMEL Subscription Information
ODB	Operator Determined Barring
OR	Optimal Routeing
OSS	Operator Specific Service
PDP	Packet Data Protocol
PIC	Point In Call
PLMN	Public Land Mobile Network
SGSN	Serving GPRS Support Node
SLPI	Service Logic Program Instance
SM	Short Message

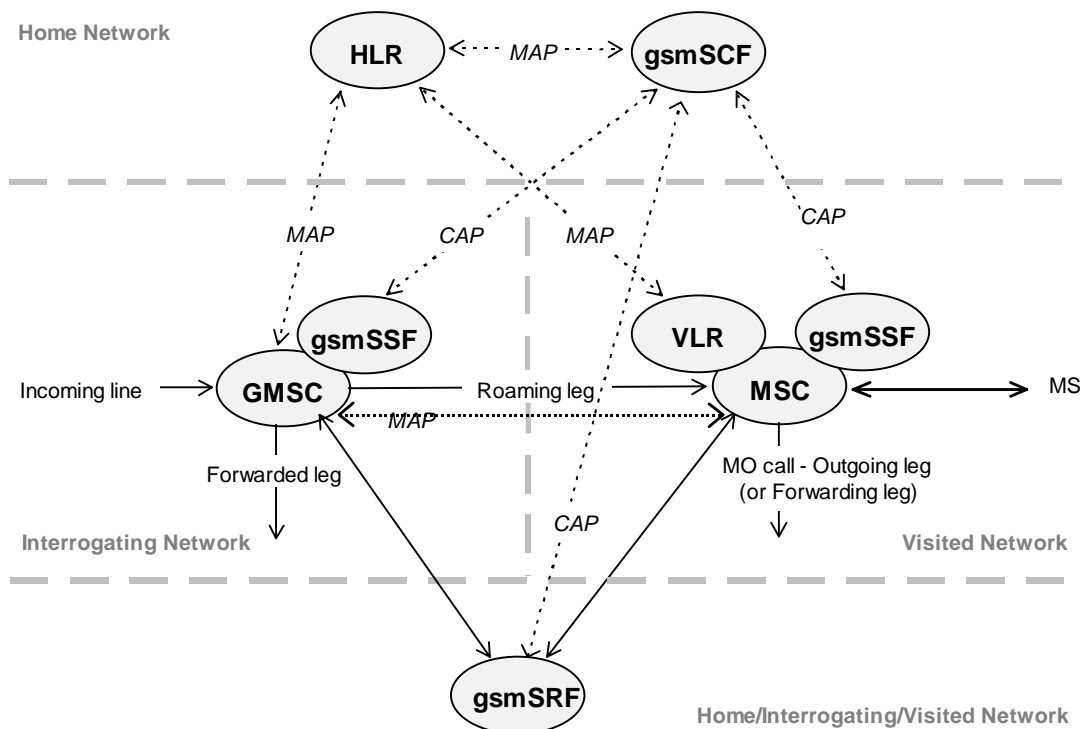

SM-CP	Short Message Control Protocol
SMF	Service Management Function
SMLC	Serving MLC
SMRSE	Short Message Relay Service Element
SMS	Short Message Service
SMSC	Short Message Service Centre
SMS-CSI	Short Message Service CAMEL Subscription Information
SS-CSI	Supplementary Service Notification CAMEL Subscription Information
T-BCSM	Terminating Basic Call State Model
T-CSI	Terminating CAMEL Subscription Information (in the GMSC)
TDP	Trigger Detection Point
TPDU	Transfer Protocol Data Unit
TIF-CSI	Translation Information Flag
U-CSI	USSD CAMEL Subscription Information
UG-CSI	USSD General CAMEL Service Information
UNI	User Network Interface
VLR	Visitor Location Register
VPLMN	Visited PLMN
VT	Mobile Terminating in VMSC
VT-CSI	VMSC Terminating CAMEL Subscription Information

## 4 Circuit switched Call Control

### 4.1 Architecture

#### 4.1.1 Functional Entities used for CAMEL

This subclause describes the functional architecture needed to support CAMEL. Also the additions needed to the basic functionality are described. Figure 4.1 shows the functional entities involved in calls requiring CAMEL support. The architecture is applicable to the fourth phase of CAMEL.

**Figure 4.1: Functional architecture for support of CAMEL**

**HLR:** For subscribers requiring CAMEL support, the HLR stores the information relevant to the current subscription regarding O-CSI, D-CSI, T-CSI, VT-CSI and TIF-CSI. The O-CSI is sent to the VLR at Location Update, on data restoration or if the O-CSI is updated by administrative action. The D-CSI is sent to the VLR at Location Update, on data restoration or if the D-CSI is updated by administrative action. The VT-CSI is sent to the VLR at Location Update, on data restoration or if the VT-CSI is updated by administrative action. The TIF-CSI is sent to the VLR at Location Update, on data restoration or if the TIF-CSI is updated by administrative action. The O/D/T-CSI is sent to the GMSC when the HLR responds to a request for routing information.

**GMSC:** When processing the calls for subscribers requiring CAMEL support, the GMSC receives an O/D/T-CSI from the HLR, indicating the GMSC to request instructions from the gsmSSF. The GMSC monitors on request the call states (events) and informs the gsmSSF of these states during processing, enabling the gsmSSF to control the execution of the call in the GMSC.

**MSC:** When processing the calls for subscribers requiring CAMEL support, the MSC receives an O-CSI and / or D-CSI and / or TIF-CSI and / or VT-CSI from the VLR indicating the MSC to request instructions from the gsmSSF. The MSC monitors on request the call states (events) and informs the gsmSSF of these states during processing, enabling the gsmSSF to control the execution of the call in the MSC.

**VLR:** The VLR stores the O-CSI, D-CSI, VT-CSI and TIF-CSI as a part of the subscriber data for subscribers roaming in the VLR area.

**gsmSSF:** see subclause 3.1.

**gsmSCF**: see subclause 3.1.

**gsmSRF**: see subclause 3.1.

## 4.1.2 Interfaces defined for CAMEL

This subclause describes the different interfaces applicable to CAMEL. It specifies on a high level the functions specific to CAMEL.

### 4.1.2.1 HLR - VLR interface

This interface is used to send the CAMEL related subscriber data to the visited PLMN and for provision of MSRN. The interface is also used to retrieve subscriber status and location information of the mobile subscriber or to indicate suppression of announcement for a CAMEL service.

### 4.1.2.2 GMSC - HLR interface

This interface is used at terminating calls to exchange routeing information, subscriber status, location information, subscription information and suppression of announcements. The CAMEL related subscriber data that is passed to the IPLMN is sent over this interface.

### 4.1.2.3 GMSC - gsmSSF interface

This is an internal interface. The interface is described in the present document to make it easier to understand the handling of DPs (arming/disarming of DPs, DP processing etc.).

### 4.1.2.4 gsmSSF - gsmSCF interface

This interface is used by the gsmSCF to control a call in a certain gsmSSF and to request the gsmSSF to establish a connection with a gsmSRF. Relationships on this interface are opened as a result of the gsmSSF sending a request for instructions to the gsmSCF or opened as a result of the gsmSCF sending a request to the gsmSSF to initiate a new call.

### 4.1.2.5 MSC - gsmSSF interface

This is an internal interface. The interface is described in the present document to make it easier to understand the handling of DPs (arming/disarming of DPs, DP processing etc.).

### 4.1.2.6 gsmSCF - HLR interface

This interface is used by the gsmSCF to request information from the HLR. As a network operator option the HLR may refuse to provide the information requested by the gsmSCF.

### 4.1.2.7 gsmSCF - gsmSRF interface

This interface is used by the gsmSCF to instruct the gsmSRF to play tones/announcements to the users.

### 4.1.2.8 GMSC - MSC interface

This interface is used to transfer control of a call from a VMSC back to a GMSC for optimal routeing.

## 4.2 Detection Points (DPs)

### 4.2.1 Definition and description

Certain basic call events may be visible to the GSM Service Control Function (gsmSCF). The DPs are the points in call at which these events are detected. The DPs for Mobile Originated Calls and Mobile Terminated Calls are described in subclauses 4.4.2 and 4.4.3.

A DP can be armed in order to notify the gsmSCF that the DP was encountered, and potentially to allow the gsmSCF to influence subsequent handling of the call. If the DP is not armed, the processing entity continues the processing without gsmSCF involvement.

Three different types of DPs are identified:

- Trigger Detection Point - Request (TDP--R).

This detection point is statically armed and initiates a CAMEL control relationship when encountered and there is no existing relationship due to the same CSI. Processing is suspended when the DP is encountered.

- Event Detection Point - Request (EDP-R).

This detection point is dynamically armed within the context of a CAMEL control relationship. Processing is suspended when encountering the DP and the gsmSSF waits for instructions from the gsmSCF.

- Event Detection Point - Notification (EDP-N).

This detection point is dynamically armed within the context of a CAMEL control relationship. Processing is not suspended when encountering the DP.

The DPs are characterized in the following subclauses.

#### 4.2.1.1 Arming/disarming mechanism

A DP may be statically armed or dynamically armed.

The following arming rules apply:

- A DP for mobile terminating call handling is statically armed in the GMSC as a result of T-CSI delivery from the HLR. A DP for mobile terminating call handling is statically armed in the VMSC as a result of VT-CSI delivery from the VLR. A DP for forwarding leg handling is statically armed in the GMSC as result of O-CSI and/or D-CSI delivery from the HLR. A DP for mobile originating call or forwarded leg handling is statically armed in the VMSC as a result of O-CSI and/or D-CSI delivery from the VLR.
- A DP is dynamically armed by the gsmSCF within the context of a CAMEL control relationship (between the gsmSSF and the gsmSCF).
- A Request Report BCSM Event information flow for a detection point for a leg overwrites any previous Request Report BCSM Event information flow for that detection point for that leg.

The following disarming rules apply:

- A statically armed DP is disarmed when the O-CSI, D-CSI, T-CSI or VT-CSI that caused the DP to be statically armed is withdrawn in the HLR. Only TDP-Rs can be disarmed using this mechanism.
- If an armed EDP is met, then it is disarmed.
- If an EDP is met that causes the release of the related leg, then all EDPs related to that leg are disarmed.
- If a call is released, then all EDPs related to that call are disarmed.
- If an EDP is met, then other EDPs are disarmed, in accordance with the implicit disarming rule table (see subclause 4.4.4).
- If an EDP is armed, it can be explicitly disarmed by the gsmSCF by means of the Request Report BCSM Event information flow.

#### 4.2.1.2 Criteria

Criteria are the conditions that must be met in order for the gsmSSF to request instructions from the gsmSCF.

##### 4.2.1.2.1 Criteria at DP Collected\_Info

The criteria for a mobile originating call are checked in the originating MSC.

The criteria for a mobile forwarded call are checked in the forwarding MSC.

For early forwarded calls in the GMSC, the HLR may decide not to include the DP Collected\_Info trigger criteria in the subscriber data sent to the GMSC if the trigger criteria for the call are not met.

For optimally routed late forwarded calls, the MSC may decide not to include the DP Collected\_Info trigger criteria in the Resume Call Handling information flow sent to the GMSC, if the trigger criteria for the call are not met.

The following criteria are applicable for DP Collected\_Info:

- Destination number triggering criterion: The HLR may store a list of up to 10 destination numbers and/or up to 3 number lengths. There is no restriction on the nature of address. There is no restriction on the numbering plan indicator. This criterion may be defined to be either "enabling" or "inhibiting".
- Basic service triggering criterion: The HLR may store a list of up to 5 basic service codes, each of which may represent an individual basic service or a basic service group. Compound basic service group codes, as defined in 3GPP TS 29.002 [32], are not allowed for conditional triggering. This list is a triggering list.
- Forwarding triggering criterion: The HLR may store an indicator that triggering shall occur only for a call which has been subject to the Call Forwarding supplementary service, Call Deflection supplementary service or CAMEL call forwarding. This criterion may be defined to be either "enabling" or "inhibiting".

For MO calls, triggering at DP Collected\_Info shall be strictly based on the number received over the access network. No service selection information, such as \* and # digits, or carrier selection information, dialled by the subscriber, shall be removed from the number before conditional triggering check takes place.

For MF calls at the VMSC, triggering at DP Collected\_Info shall be strictly based on the number received over the access network (the Deflected-to-Number in the case of Call Deflection), the Forwarded-to-Number retained in the VLR or the Destination Routing Address received in the Connect information flow from the gsmSCF during a Terminating CAMEL Service at the VMSC.

No service selection information or carrier selection information shall be removed from the number before conditional triggering check takes place.

For MF calls at the GMSC, triggering at DP Collected\_Info shall be strictly based on the Forwarded-to-Number received from HLR, on the Destination Routing Address received in the Connect information flow from the gsmSCF during a Terminating CAMEL Service or on the Forwarded-to-Number received in the Resume Call Handling information flow.

No service selection information or carrier selection information shall be removed from the number before conditional triggering check takes place.

One or more DP criteria may be applicable. All applicable triggering criteria must be satisfied before the dialogue is established with the gsmSCF.

If the destination number triggering criterion is enabling, then the gsmSSF may establish a dialogue with the gsmSCF if:

- the destination number matches one of the destination number strings defined in the list, or
- the length of the destination number matches one of the destination number lengths defined in the list.

In this test the destination number matches one of the destination number strings in the list if:

- the nature of address of destination number is the same as the nature of address of the destination number string (The numbering plan indicator is not compared);
- the destination number is at least as long as the destination number string in the list, and
- all the digits in the destination number string in the list match the leading digits of the destination number.

If the destination number triggering criterion is inhibiting, then the gsmSSF may establish a dialogue with the gsmSCF if:

- the destination number does not match any of the destination number strings defined in the list, and
- the length of the destination number does not match any of the destination number lengths defined in the list.

In this test the destination number matches one of the destination number strings in the list if:

- the nature of address of the destination number is the same as the nature of address of the destination number string (The numbering plan indicator is not compared);
- the destination number is at least as long as the destination number string in the list, and
- all the digits in the destination number string in the list match the leading digits of the destination number.

The basic service triggering criterion is met if the basic service for the call matches a stored individual basic service code or is a member of the group defined by a stored basic service group code. For the purpose of this paragraph a general bearer service is a member of the corresponding bearer service group.

If the forwarding triggering criterion is enabling, then the gsmSSF may establish a dialogue with the gsmSCF only if the call has been subject to CAMEL call forwarding or the Call Forwarding supplementary service. If the forwarding triggering criterion is inhibiting, then the gsmSSF may establish a dialogue with the gsmSCF only if the call has not been subject to CAMEL call forwarding or the Call Forwarding supplementary service.

#### 4.2.1.2.2 Criteria at DP Analysed\_Information

##### 4.2.1.2.2.1 General

The criteria for a mobile originating call are checked in the originating MSC. The criteria for a mobile forwarded call are checked in the forwarding MSC.

For early forwarded calls in the GMSC, the HLR shall always include the trigger criteria in the subscriber data sent to the GMSC because that the HLR can not check the criteria applicable at DP Analysed\_Info, since the number that the criteria check shall be based on, may be modified by a Mobile Terminating or Mobile Forwarding Service Logic for this call.

For optimally routed late forwarded calls, the MSC shall always include the trigger criteria in the Resume Call Handling information flow sent to the GMSC because the MSC can not check the criteria applicable at DP Analysed\_Info, since the number that the criteria check shall be based on, may be modified by a Mobile Terminating or Mobile Forwarding Service Logic for this call.

The following criteria are applicable for DP Analysed\_Information:

- Destination number triggering criterion: The HLR may store a list of up to 10 destination numbers. There is no restriction on the nature of address. There is no restriction on the numbering plan indicator.

For MO calls, triggering at DP Analysed\_Info shall be based on the called party number received over the access network or the Destination Routing Address in the Connect information flow from the gsmSCF during a Mobile Originating CAMEL Service.

For MF calls at the VMSC, triggering at DP Analysed\_Info shall be based on the number received over the access network (the Deflected-to-Number in the case of Call Deflection), the Forwarded-to-Number retained in the VLR, or the Destination Routing Address in the Connect information flow from the gsmSCF during a Mobile Terminated or Mobile Forwarded CAMEL Service.

For MF calls at the GMSC, triggering at DP Analysed\_Info shall be based on the Forwarded-to-Number received from the HLR, on the Destination Routing Address received in the Connect information flow from gsmSCF during a Mobile Terminated or Mobile Forwarded CAMEL Service, or on the Forwarded-to-Number received in the Resume Call Handling information flow.

##### 4.2.1.2.2.2 Removal of information significant to the serving entity

In order to decide whether triggering shall take place, the trigger criteria need to be compared with the address information. Before the comparison takes place the following information shall be removed from the destination address information:

- Operator specific service selection information that is recognised and treated locally in the serving entity. This shall not lead to a change of the type of number indicator of the address information.

- Carrier selection information. If the removal of carrier selection information also removes international or national (trunk) prefixes (depending on regulatory requirements), then the type of number indicator of the address information shall be changed to "international number" or "national (significant) number" respectively. Otherwise the type of number indicator shall remain unchanged.

The address information in a subsequent Initial DP information flow at DP Analysed\_Info shall not contain the removed information, however in the further call handling the serving entity shall invoke the requested services (e.g. carrier selection).

#### 4.2.1.2.2.3 Number comparison

The following procedure shall be performed for the comparison of the destination number triggering criterion and the address information in the given order.

1. The numbering plan indicators of the destination number triggering criterion and the destination number are ignored.
2. The type of number/nature of address indicators of the destination number triggering criterion and the destination number are compared. If there is a match of the type of number indicator, then the check shall be performed by comparing the digits as defined in step 6. If there is no match of the type of number the comparison procedure shall continue as follows.
3. If there are other types of number/nature of address indicators present than "unknown", "national (significant) number" or "international number" then the destination number does not match the destination number triggering criterion. Otherwise the comparison procedure shall continue as follows.
4. If there is a number with type of number/nature of address "unknown" this number shall be translated based on the numbering plan of the serving entity in either of the following ways:
  - if the leading digits refer to an international prefix then those digits shall be removed and the type of number/nature of address shall be set to "international number".
  - if the leading digits refer to a national (trunk) prefix then those digits shall be removed and the type of number/nature of address shall be set to "national (significant) number".

If the leading digits refer neither to an international prefix nor to a national (trunk) prefix, then the destination number does not match the destination number triggering criterion.

If there is a match of the type of number/nature of address indicator after this number modification, then the check shall be performed by comparing the digits as defined in step 6, otherwise the comparison procedure shall continue as follows.

5. If there is a number with type of number/nature of address "national (significant) number" this number shall be translated based on the numbering plan of the serving entity to international format by adding the country code of the serving entity to the number string. After this modification the destination number triggering criterion and the destination number shall be in international format and shall be checked by comparing the digits as defined in step 6.
6. If the number of digits in the address information are compared with the number of digits in the destination number triggering criterion, then there is a match if:
  - the destination number is at least as long as the destination number string of the destination number triggering criterion, and
  - all the digits in the destination number string of the destination number triggering criterion match the leading digits of the destination number.

The check described in this subclause shall be repeated for every number contained in the destination number triggering criterion of the D-CSI until there is a match DP Analysed\_Info is triggered, or until all the destination numbers have been checked without a match. In the latter case DP Analysed\_Info is not triggered.

The procedures for the destination number triggering criterion check for N-CSI are network specific.

The modifications of the address information described in this subclause shall only be done for comparison purposes, i.e. they shall not affect the format of the destination address information sent in the Initial DP information flow.

#### 4.2.1.2.3 Criteria at DP Route\_Select\_Failure

The HLR may store a list of up to 5 cause values.

The criteria for a mobile originating call are checked in the originating MSC. The criteria for a mobile forwarded call are checked in the forwarding MSC.

For early forwarded calls in the GMSC, the HLR shall always include the trigger criteria in the subscriber data sent to the GMSC because the cause code received from ISUP is used in the trigger criteria check. The cause code is not known at the time of sending the O-CSI to the GMSC.

For optimally routed late forwarded calls, the MSC shall always include the trigger criteria in the Resume Call Handling information flow sent to the GMSC because the cause code received from ISUP is used in the trigger criteria check. The cause code is not known at the time of sending the O-CSI to the GMSC.

The following criteria are applicable for DP Route\_Select\_Failure:

- Release cause code.

The trigger criteria are met if the cause code received from ISUP is equal to at least one of the cause codes in the trigger criteria list. For the purpose of trigger criteria check, the MSC performing the triggering check shall use the "cause value" field of the ISUP "cause indicators" parameter, as defined in ITU-T Recommendation Q.763 [40].

If an O-BCSM was already invoked and there is a relationship with the gsmSCF at that moment, then no additional relationship shall be initiated.

#### 4.2.1.2.4 Criteria at DP Terminating\_Attempt\_Authorised

The HLR may store a list of up to 5 basic service codes, each of which may represent an individual basic service or a basic service group. Compound basic service group codes, as defined in 3GPP TS 29.002 [32], are not allowed for conditional triggering. This list is a triggering list.

The criteria for DP Terminating\_Attempt\_Authorised are checked in the HLR for the GMSC or in the VLR for the MSC. The HLR shall only include T-CSI in the CAMEL subscription information sent to the GMSC if the criteria are met. The VLR shall only include VT-CSI in the CAMEL subscription information sent to the MSC if the criteria are met.

The basic service criterion is met if the basic service for the call matches a stored individual basic service code or is a member of the group defined by a stored basic service group code. For the purpose of this paragraph a general bearer service is a member of the corresponding bearer service group.

#### 4.2.1.2.5 Criteria at DP T\_Busy and T\_No\_Answer

The HLR may store a list of up to 5 cause values.

The criteria for a mobile terminating call are checked in the GMSC or in MSC.

For mobile terminating calls in the GMSC, the HLR shall include the trigger criteria in the subscriber data sent to the GMSC because the cause code received from ISUP is used in the trigger criteria check. The cause code is not known at the time of sending the T-CSI to the GMSC.

If the Send Routeing Info ack information flow includes the Not Reachable FTN, then the HLR may decide not to include the trigger criteria, if the HLR has identified that T-CSI includes DP T\_Busy with cause code Not Reachable.

If the Send Routeing Info ack information flow includes the Not Reachable FTN and also T-CSI, including DP T\_Busy with cause code, then the not reachable condition shall be mapped to an ISUP release code, which shall be used for the triggering check.

For Mobile terminating calls in the VMSC, the trigger criteria are received in the VT-CSI from the HLR in the Insert Subscriber Data information flow. The triggering is based on the ISUP release cause code (call set up result).

The following criteria are applicable for DP T\_Busy and DP T\_No\_Answer:

- Release cause code.

If the cause code is received from ISUP, then the trigger criteria are met if the cause code is equal to at least one of the cause codes in the trigger criteria list. For this check, the MSC shall use the "cause value" field of the ISUP "cause indicators" parameter, as defined in ITU-T Recommendation Q.763 [40].

If the cause code is received from MAP, then the trigger criteria are met if the cause code is equal to at least one of the cause codes in the trigger criteria list. For this check, the MSC shall use the cause values as defined in table 4.1.

If the trigger criteria are satisfied, then the corresponding Service Logic shall be invoked.

If a T-BCSM was already invoked and there is a relationship with the gsmSCF at that moment, then no additional relationship shall be initiated.

When the Resume Call Handling information flow is received in the GMSC and the subscriber has T-CSI then the forwarding reason in the Resume Call Handling information flow shall be used to perform the trigger criteria check for DP T\_Busy or DP T\_No\_Answer. If a match is found, then the corresponding Service Logic shall be invoked. If a T-BCSM was already invoked and there is a relationship with the gsmSCF at that moment, then no additional relationship shall be initiated.

**Table 4.1: Mapping of Send Info For Incoming Call (SIFIC) ack, Send Routeing Info ack (SRI ack) or Resume Call Handling (RCH) to ISUP release causes for triggering criteria check**

SIFIC ack / SRI ack / RCH "forwarding reason"	ISUP release cause number	ISUP release cause name
MS not reachable	20	Subscriber absent
MS Busy	17	User busy
Call deflection (note)	21	Call rejected
No reply	19	No answer from user (user alerted)

Note: Call Deflection is used only in the Resume Call Handling information flow, and in the VMSC. The same code point in the Send Routeing Info ack indicates CFU. However, the CFU invocation in the GMSC triggers the Terminating\_Attempt\_Authorised DP; thus the reason code mapping is not needed in the CFU case.

#### 4.2.1.3 Relationship

If an armed DP is encountered, the gsmSSF provides an information flow via the already established relationship with the gsmSCF.

A relationship between the gsmSSF and the gsmSCF for the purpose of operator specific service processing is considered to be a CAMEL relationship. There are two types of CAMEL relationships:

- A CAMEL control relationship if the gsmSCF is able to influence the call processing via the relationship.
- A CAMEL monitor relationship if the gsmSCF is not able to influence the call processing via the relationship.

#### 4.2.2 DP processing rules

The gsmSSF shall apply the following set of rules during DP processing to ensure a single point of control:

- EDPs are disarmed by the gsmSSF as they are encountered and reported to the gsmSCF, when the occurrence of another EDP causes the implicit disarming of the EDP or when the leg clears.
- A control relationship persists as long as there is 1 or more EDP-R armed for this portion of the call or if the Process CS\_gsmSSF is in any state except Monitoring or Idle.
- A control relationship changes to a monitor relationship if the control relationship does not persist and:
  - 1 or more EDP-N is armed, or
  - 1 or more Call information Report is outstanding, or
  - an Apply Charging Report is outstanding.
- If a control relationship does not persist and does not change to a monitor relationship then the relationship terminates. A monitor relationship terminates if there are neither EDP-Ns armed nor reports outstanding or if the call clears.

## 4.3 Description of CAMEL Subscriber Data

### 4.3.1 Originating CAMEL Subscription Information (O-CSI)

This subclause defines the contents of the Originating CAMEL Subscription Information.

#### 4.3.1.1 TDP List

The TDP List indicates on which detection point triggering shall take place.

The following trigger detection points are possible: DP Collected\_Info and DP Route\_Select\_Failure.

#### 4.3.1.2 gsmSCF address

The gsmSCF address indicates the address to be used to access the gsmSCF for a particular subscriber. The address shall be an E.164 number to be used for routing. Different gsmSCF addresses may be associated with different TDPs.

#### 4.3.1.3 Service Key

The Service Key indicates to the gsmSCF the service logic to be used. Different Service Keys may be associated with different TDPs.

#### 4.3.1.4 Default Call Handling

The Default Call Handling indicates whether the call shall be released or continued as requested if there is an error in the gsmSSF to gsmSCF dialogue or if the call is subject to call gapping in the gsmSSF. A default call handling shall be associated with each Service Key.

#### 4.3.1.5 DP criteria

The DP criteria indicate whether the gsmSSF shall request instructions from the gsmSCF.

#### 4.3.1.6 CAMEL Capability Handling

CAMEL Capability Handling indicates the phase of CAMEL which is requested by the gsmSCF for the service.

The HLR shall not include in a CSI which it sends to a VLR or GMSC any data for a CAMEL phase later than that which the CAMEL capability handling indicates. E.g. if the CAMEL Capability Handling indicates CAMEL phase 1 then the HLR shall not send triggering criteria to the VLR. Different CSIs may contain different values of CAMEL Capability Handling.

NOTE: If CAMEL is not supported or if a lower phase of CAMEL is supported in the VLR, the HLR can decide on a subscriber basis to apply ODB, perform normal call handling or perform operator specific handling (eventually support of a lower version of CSI).

#### 4.3.1.7 CSI state

The CSI state indicates whether the O-CSI is active or not.

#### 4.3.1.8 Notification flag

The notification flag indicates whether the change of the O-CSI shall trigger Notification on Change of Subscriber Data.

### 4.3.2 Dialed Service CAMEL Subscription Information (D-CSI)

This subclause defines the contents of the Dialed Service CAMEL Subscription Information.

#### 4.3.2.1 DP criteria

The DP criteria indicate whether the gsmSSF shall request instructions from the gsmSCF.

#### 4.3.2.2 gsmSCF address

The gsmSCF address indicates the address to be used to access the gsmSCF for a particular subscriber. The address shall be an E.164 number to be used for routing. A gsmSCF address shall be associated with each DP criterion.

#### 4.3.2.3 Service Key

The Service Key identifies to the gsmSCF the service logic to be used. A Service Key shall be associated with each DP criterion.

#### 4.3.2.4 Default Call Handling

The Default Call Handling indicates whether the call shall be released or continued as requested if there is an error in the gsmSSF to gsmSCF dialogue or if the call is submitted to call gapping in the gsmSSF. A default call handling shall be associated with each DP criterion.

#### 4.3.2.5 CAMEL Capability Handling

CAMEL Capability Handling indicates the phase of CAMEL which is requested by the gsmSCF for the service. It shall indicate CAMEL phase 3.

NOTE: If CAMEL is not supported or if a lower phase of CAMEL is supported in the VLR, the HLR can decide on a subscriber basis to apply ODB, perform normal call handling or perform operator specific handling (eventually support of a lower version of CSI).

#### 4.3.2.6 CSI state

The CSI state indicates whether the D-CSI is active or not.

#### 4.3.2.7 Notification flag

The notification flag indicates whether changes of the D-CSI shall trigger the Notification on Change of Subscriber Data.

### 4.3.3 Network Service CAMEL Subscription Information (N-CSI)

The N-CSI identifies services offered on a per-network basis by the serving PLMN operator for all subscribers. This CSI shall be stored in the MSC.

### 4.3.4 Translation Information Flag CAMEL Subscription Information (TIF-CSI)

#### 4.3.4.1 Translation Information Flag

The TIF-CSI in the CAMEL Subscriber data indicates,

- when the subscriber registers a forwarded-to number, that the HLR shall not attempt to perform any translation, number format checks, prohibited FTN checks or call barring checks. (see 3GPP TS 23.082 [19]).
- when the subscriber invokes the Call Deflection supplementary service, that the VLR shall not attempt to perform any translation, number format checks, prohibited DTN checks, call barring checks. (see 3GPP TS 23.072 [16]).

#### 4.3.4.2 Notification flag

The notification flag indicates whether the change of the TIF-CSI shall trigger Notification on Change of Subscriber Data or not.

### 4.3.5 Terminating CAMEL Subscription Information (in the GMSC) (T-CSI)

This subclause defines the contents of the Terminating CAMEL Subscription Information.

#### 4.3.5.1 TDP List

The TDP List indicates on which detection point triggering shall take place.

The following trigger detection points are possible: DP Terminating\_Attempt\_Authorised, DP T\_Busy, and DP T\_No\_Answer.

#### 4.3.5.2 gsmSCF address

The gsmSCF address indicates the address to be used to access the gsmSCF for a particular subscriber. The address shall be an E.164 number to be used for routing. Different gsmSCF addresses may be associated with different TDPs.

#### 4.3.5.3 Service Key

The Service Key indicates to the gsmSCF the service logic to be used. Different Service Keys may be associated with different TDPs.

#### 4.3.5.4 Default Call Handling

The Default Call Handling indicates whether the call shall be released or continued as requested if there is an error in the gsmSSF to gsmSCF dialogue or if the call is subject to call gapping in the gsmSSF. A default call handling shall be associated with each Service Key.

#### 4.3.5.5 DP criteria

The DP criteria indicate whether the gsmSSF shall request instructions from the gsmSCF.

#### 4.3.5.6 CAMEL Capability Handling

CAMEL Capability Handling indicates the phase of CAMEL which is requested by the gsmSCF for the service.

The HLR shall not include in a CSI which it sends to a GMSC any data for a CAMEL phase later than that which the CAMEL capability handling indicates. Different CSIs may contain different values of CAMEL Capability Handling.

NOTE: If CAMEL is not supported or if a lower phase of CAMEL is supported in the GMSC, the HLR can decide on a subscriber basis to apply ODB, perform normal call handling or perform operator specific handling (e.g. support of a lower version of CSI).

#### 4.3.5.7 CSI state

The CSI state indicates whether the T-CSI is active or not.

#### 4.3.5.8 Notification flag

The notification flag indicates whether the change of the T-CSI shall trigger Notification on Change of Subscriber Data or not.

### 4.3.6 VMSC Terminating CAMEL Subscription Information (VT-CSI)

This subclause defines the contents of the Terminating CAMEL Subscription Information for the VMSC.

#### 4.3.6.1 TDP List

The TDP List indicates on which detection point triggering shall take place.

The following trigger detection points are possible: DP Terminating\_Attempt\_Authorised, DP T\_Busy, and DP T\_No\_Answer.

#### 4.3.6.2 gsmSCF address

The gsmSCF address indicates the address to be used to access the gsmSCF for a particular subscriber. The address shall be an E.164 number to be used for routing. Different gsmSCF addresses may be associated with different TDPs.

#### 4.3.6.3 Service Key

The Service Key indicates to the gsmSCF the service logic to be used. Different Service Keys may be associated with different TDPs.

#### 4.3.6.4 Default Call Handling

The Default Call Handling indicates whether the call shall be released or continued as requested if there is an error in the gsmSSF to gsmSCF dialogue or if the call is subject to call gapping in the gsmSSF. A default call handling shall be associated with each Service Key.

#### 4.3.6.5 DP criteria

The DP criteria indicate whether the gsmSSF shall request the gsmSCF for instructions.

#### 4.3.6.6 CAMEL Capability Handling

CAMEL Capability Handling indicates the phase of CAMEL which is requested by the gsmSCF for the service.

The HLR shall not include in a CSI which it sends to a VLR any data for a CAMEL phase later than that which the CAMEL capability handling indicates.

NOTE: If CAMEL is not supported or if a lower phase of CAMEL is supported in the VLR, the HLR can decide on a subscriber basis to apply ODB, perform normal call handling or perform operator specific handling (eventually support of a lower version of CSI).

#### 4.3.6.7 CSI state

The CSI state indicates whether the VT-CSI is active or not.

#### 4.3.6.8 Notification flag

The notification flag indicates whether the change of the VT-CSI shall trigger Notification on Change of Subscriber Data or not.

### 4.3.7 Other CAMEL data

#### 4.3.7.1 Location information/Subscriber state Interrogation

This data indicates whether additional subscriber information shall be sent to the GMSC as part of the terminating call handling.

- an indication that the HLR shall send the location information of the called subscriber.
- an indication that the HLR shall send the subscriber state of the called subscriber.

#### 4.3.7.2 gsmSCF address list for CSI

The gsmSCF address list for CSI indicates a list of gsmSCF addresses to which Notification on Change of Subscriber Data is to be sent. This list is common to all CSI.

### 4.4 Description of CAMEL BCSMs

#### 4.4.1 General Handling

The BCSM is used to describe the actions in an MSC or GMSC or VMSC during originating, forwarded or terminating calls.

The BCSM identifies the points in basic call processing when Operator Specific Service (OSS) logic instances (accessed through the gsmSCF) are permitted to interact with basic call control capabilities.

Figure 4.2 shows the components that have been identified to describe a BCSM.

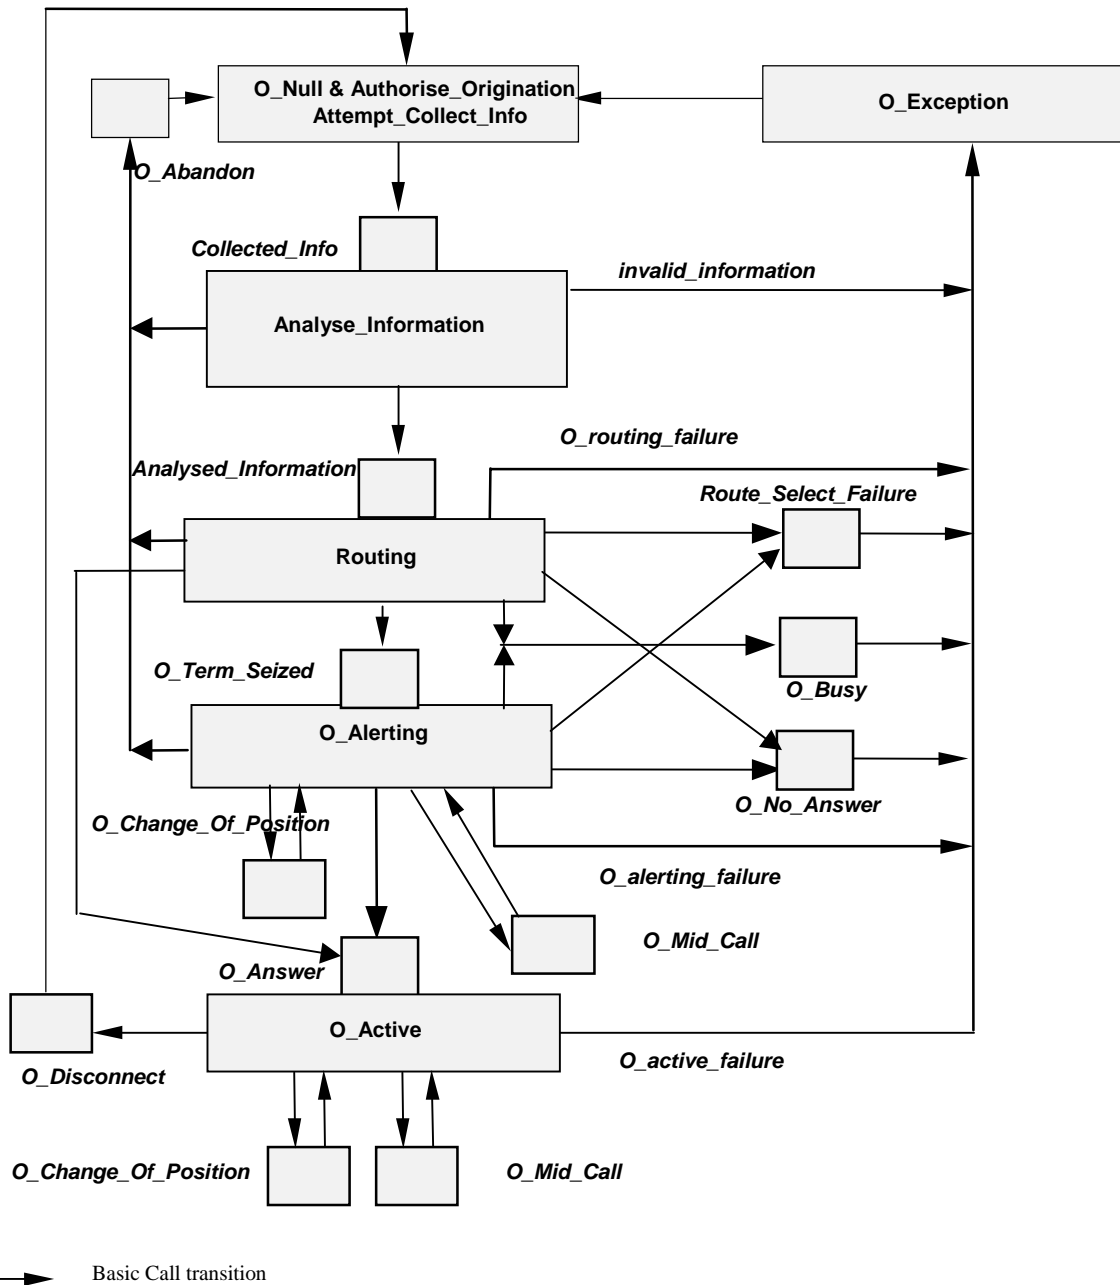

**Figure 4.2: BCSM Components**

#### 4.4.2 Originating Basic Call State Model (O-BCSM)

##### 4.4.2.1 Description of O-BCSM

The O-BCSM is used to describe the actions in an MSC during originating (MSC) or forwarded (MSC or GMSC) calls.

When encountering a DP the O-BCSM processing is suspended at the DP and the MSC or GMSC indicates this to the gsmSSF which determines what action, if any, shall be taken if the DP is armed. For gsmSCF initiated new calls the O-BCSM is initially suspended at DP Collected\_Info.

NOTE: The DP O\_Busy also includes the 'not reachable' case.

**Figure 4.3: Originating BCSM for CAMEL**

The table below defines the different DPs which apply to mobile originating and forwarded calls.

Table 4.2: Description of O-BCSM DPs in the MSC

CAMEL Detection Point:	DP Type	Description:
DP Collected_Info	TDP-R	Indication that the O-CSI is analysed or the gsmSCF has initiated a call attempt. In the later case the DP is neither triggered nor reported.
DP Analysed_Information	TDP-R (note 2)	Availability of routeing address and nature of address.
DP Route_Select_Failure	TDP-R (note 3), EDP-N, EDP-R	Indication that the call establishment failed.
DP O_Busy	EDP-N, EDP-R	Indication that: - a busy indication is received from the terminating party, - a not reachable event is determined from a cause IE in the ISUP Release message.
DP O_No_Answer	EDP-N, EDP-R	Indication that: - an application timer associated with the O_No_Answer DP expires, - a no answer event is determined from a cause IE in the ISUP Release message.
DP O_Term_Seized	EDP-N, EDP-R	Indication that the called party is being alerted.
DP O_Answer	EDP-N, EDP-R	Indication that the call is accepted and answered by the terminating party.
DP O_Mid_Call	EDP-N, EDP-R	Indication that a service/service feature indication is received from the originating party (DTMF – note 4, note 5).
DP O_Change_Of_Position	EDP-N	Indication that the originating party has changed position.
DP O_Disconnect	EDP-N, EDP-R	A disconnect indication is received from the originating party or from the terminating party.
DP O_Abandon	EDP-N, EDP-R	Indication that a disconnect indication is received from the originating party during the call establishment procedure.
NOTE 1: The DPs are defined in ITU-T Recommendation Q.1224 [41].		
NOTE 2: For TDP-R Analysed_Information new relationship to gsmSCF is opened.		
NOTE 3: DP Route_Select_Failure shall be reported as TDP-R when there is no relationship to gsmSCF. If a relationship to gsmSCF is already open, it shall be reported as EDP-R or EDP-N if armed so.		
NOTE 4: DTMF is only applicable for the Mobile Originating Call in the VMSC.		
NOTE 5: Call Processing is suspended at DP O_Mid_Call if a Call Party Handling information flow is handled. However, the DP is not reported.		

#### 4.4.2.1.1 Description of the call model (PICs)

This subclause describes the call model for originating and forwarded calls. For each PIC a description can be found of the entry events, functions and exit events.

It should be noted that although the names used for PICs match those used in ITU-T Recommendation Q.1224 [41] the specific descriptions differ.

##### 4.4.2.1.1.1 O\_Null & Authorise\_Origination\_Attempt\_Collect\_Info

Entry events:

- Disconnection and clearing of a previous call (DP O\_Disconnect) or default handling of exceptions by gsmSSF/(G)MSC completed.
- Abandon event is reported from Analyse\_Information or Routing and Alerting PIC.
- Exception event is reported.

Actions:

- Interface is idled.
- Originating call: SETUP information flow containing the dialled number is received from MS.
- Originating call: The supplementary service "barring of all outgoing calls" is checked and invoked if necessary.
- Originating call: The ODB category "barring of all outgoing calls" is checked and ODB is invoked if necessary.

NOTE: the ODB category "barring of all outgoing calls when roaming" causes the HLR to send the category "barring of all outgoing call" if the VLR is not in the HPLMN.

- Originating call: CUG checks done in the originating MSC/VLR are performed.
- Information being analysed e.g., O-CSI is analysed.

Exit events:

- Originating CSI is analysed.
- An exception condition is encountered. For this PIC, if the call encounters one of these exceptions during the PIC processing, the exception event is not visible because there is no corresponding DP. Example exception condition: Calling party abandons call.

#### 4.4.2.1.1.2 Analyse\_Information

Entry events:

- Originating CSI is analysed. (DP Collected Info).
- The gsmSCF has initiated a call attempt (DP Collected\_Info). In this case the DP has neither been triggered nor has it been reported.
- New routing information is received when the Busy event (DP O\_Busy), Route Select Failure event (DP Route\_Select\_Failure), Not Reachable event (DP O\_Busy) or No Answer event (DP O\_No\_Answer) is reported from the Routing and Alerting PIC.
- New routing information is received when the Disconnect event is reported from the O\_Active PIC.

Actions:

- Compare the called party number with the dialled services information.

Exit events:

- Availability of routing address and nature of address. (DP Analysed\_Information).
- An exception condition is encountered (e.g. wrong number); this leads to the O\_Exception PIC.
- The calling party abandons the call; this leads to the O\_Abandon DP.

#### 4.4.2.1.1.3 Routing

Entry events:

- Availability of routing address and nature of address. (DP Analysed\_Information).

Actions:

- Information is being analysed and/or translated according to dialling plan to determine routing address.
- Routing address being interpreted.
- Originating call: Outgoing barring services and ODB categories not already applied are checked and invoked if necessary.

Exit events:

- An indication is received from the terminating half BCSM that the call is accepted and answered by the terminating party; this leads to O\_Answer DP.
- An exception condition is encountered; this leads to the O\_Exception PIC.
- The calling party abandons the call; this leads to the O\_Abandon DP.
- A busy indication is received from the terminating party; this leads to the O\_Busy DP.

- A not reachable indication is received from the terminating party; this leads to the O\_Busy DP.
- The attempt to select the route for the call fails; this leads to the Route\_Select\_Failure DP.
- An alerting indication (ISUP ACM) is received from the terminating party; this leads to the O\_Term\_Seized DP.
- The no reply timer expires; this leads to the O\_No\_Answer DP.

#### 4.4.2.1.1.4 O\_Alerting

##### Entry events:

- Called Party is being alerted (DP O\_Term\_Seized).
- Continue is received in O\_Mid\_Call DP.

##### Actions:

- Call is being processed by the terminating half BCSM. Waiting for indication from terminating half BCSM that the call has been answered by terminating party.
- Send a notification to the gsmSCF if the originating party changes position and DP O\_Change\_Of\_Position is armed.

##### Exit events:

- A service/service feature request is received from the originating party (DTMF) or DP O\_Mid\_Call is used for Call Party Handling; this leads to the O\_Mid\_Call DP.
- An indication is received from the terminating half BCSM that the call is accepted and answered by the terminating party; this leads to the O\_Answer DP.
- An exception condition is encountered; this leads to the O\_Exception PIC.
- The calling party abandons the call; this leads to the O\_Abandon DP.
- A route select failure indication is received from the terminating party; this leads to the Route\_Select\_Failure DP.
- A busy indication (UDUB) is received from the terminating party; this leads to the O\_Busy DP.
- A not reachable indication is received from the terminating party; this leads to the O\_Busy DP.
- The no reply timer expires; this leads to the O\_No\_Answer DP.

#### 4.4.2.1.1.5 O\_Active

##### Entry events:

- Indication from the terminating half BCSM that the call is accepted and answered by the terminating party. (DP O\_Answer)
- Continue is received in O\_Mid\_Call DP.

##### Actions:

- Connection established between originating party and terminating party. Call supervision is provided.
- Send a notification to the gsmSCF if the originating party changes position and DP O\_Change\_Of\_Position is armed.
- Call release is awaited.

##### Exit events:

- A service/service feature request is received from the originating party (DTMF) or DP O\_Mid\_Call is used for Call Party Handling (DP O\_Mid\_Call).

- A disconnection indication is received from the originating party, or received from the terminating party via the terminating half BCSM (DP O\_Disconnect).
- An exception condition is encountered.

#### 4.4.2.1.1.6 O\_Exception

Entry events:

- An exception condition is encountered. In addition to specific examples listed above, exception events include any type of failure, which means that the normal exit events for a PIC can not be met.

Actions:

- Default handling of the exception condition is being provided. This includes general actions necessary to ensure that no resources remain inappropriately allocated such as:
  - If any relationship exists between the gsmSSF and the gsmSCF, the gsmSSF shall send an error information flow closing the relationships and indicating that any outstanding call handling instructions will not run to completion.
  - The (G)MSC/gsmSSF should make use of vendor-specific procedures to ensure release of resources within the (G)MSC/gsmSSF, so that line, trunk and other resources are made available for new calls.

Exit events:

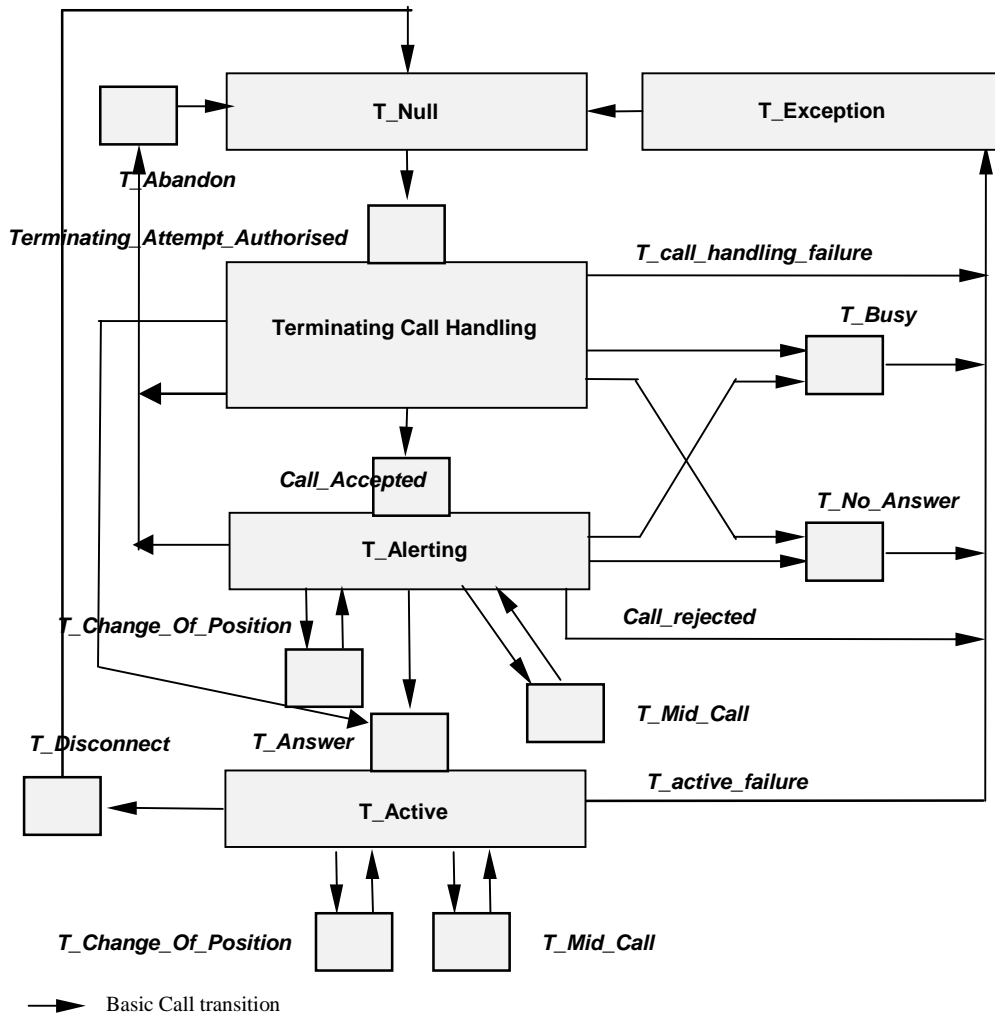

- Default handling of the exception condition by gsmSSF/(G)MSC completed.

### 4.4.3 Terminating Basic Call State Model (T-BCSM)

#### 4.4.3.1 Description of T-BCSM

The T-BCSM is used to describe the actions in a GMSC and in a VMSC during terminating calls.

When encountering a DP the T-BCSM processing is suspended at the DP and the GMSC or VMSC indicates this to the gsmSSF which determines what action, if any, shall be taken if the DP is armed.

**Figure 4.4: T-BCSM in the GMSC or VMSC**

In the table below the different DPs (in the T-BCSM) are described.

Table 4.3: Description of T-BCSM DPs in the GMSC or VMSC

CAMEL Detection Point:	DP Type	Description:
DP Terminating_Attempt_Authorised	TDP-R	Indication that the T-CSI / VT-CSI is analysed.
DP T_Busy	TDP-R (note 2), EDP-N, EDP-R	Indication that: <ul style="list-style-type: none"> <li>- a busy indication is received from the destination exchange,</li> <li>- Busy event is determined in the visited MSC,</li> <li>- Not reachable or call establishment failure event is determined from the HLR response or upon a cause IE in the ISUP Release message.</li> </ul>
DP T_No_Answer	TDP-R (note 2), EDP-N, EDP-R	Indication that an application timer associated with the T_No_Answer DP expires.
DP Call_Accepted	EDP-N, EDP-R	Indication that the called party is being alerted.
DP T_Answer	EDP-N, EDP-R	Call is accepted and answered by terminating party.
DP T_Mid_Call	EDP-N, EDP-R	Indication that a service/service feature is received from the terminating party (DTMF – note 3, note 4).
DP T_Change_Of_Position	EDP-N	Indication that the terminating party has changed position.
DP T_Disconnect	EDP-N, EDP-R	A disconnect indication is received from the terminating party or from the originating party.
DP T_Abandon	EDP-N, EDP-R	A disconnect indication is received from the originating party during the call establishment procedure.
NOTE 1: The DPs are defined in ITU-T Recommendation Q.1224 [41].		
NOTE 2: DP T_No_Answer and DP T_Busy shall be reported as TDP-R when there is no relationship to gsmSCF. If a relationship to gsmSCF is already open, it shall be reported as EDP-R or EDP-N if armed so.		
NOTE 3: DTMF is only applicable for the VMSC but not for the GMSC. DTMF is not applicable at the T_Alerting PIC.		
NOTE 4: Call Processing is suspended at DP T_Mid_Call if a Call Party Handling information flow is handled. However, the DP is not reported.		

#### 4.4.3.1.1 Description of the call model (PICs)

This subclause describes the call model for terminating calls in the GMSC and in the VMSC. For each PIC a description can be found of the entry events, functions, information available and exit events.

It should be noted that although the names used for PICs match those used in ITU-T Recommendation Q.1224 [41] the specific descriptions differ.

##### 4.4.3.1.1.1 T\_Null

Entry events:

- Disconnection and clearing of a previous call (DP T\_Disconnect) or default handling of exceptions by gsmSSF/GMSC or VMSC completed.
- Abandon event is reported from Terminating Call Handling PIC.
- Exception event is reported.

Actions:

- Interface is idled.
- If ISUP Initial Address Message is received, the appropriate information is analysed.
- If the T-BCSM is in the GMSC, a Send Routeing Info information flow is sent to the HLR.
- If the T-BCSM is in the VMSC, a Send Info For Incoming Call information flow is sent to the VLR.
- If the T-BCSM is in the GMSC:
  - The supplementary services "barring of all incoming calls" and "barring of incoming calls when roaming" are checked in the HLR and invoked if necessary.
  - The ODB categories "barring of all incoming calls" and "barring of incoming calls when roaming" are checked in the HLR and ODB is invoked if necessary.

- The supplementary service "CUG" is checked in the HLR and invoked if necessary.
- T-CSI/VT-CSI is received and analysed.

Exit events:

- Response is received from HLR or VLR and terminating CSI (if available) is analysed.
- An exception condition is encountered. For this PIC, if the call encounters one of these exceptions during the PIC processing, the exception event is not visible because there is no corresponding DP.

Example exception condition is:

- The calling party abandons call.

#### 4.4.3.1.1.2 Terminating Call Handling

Entry events:

- Response is received from HLR or VLR and terminating CSI (if available) is analysed (DP Terminating\_Attempt\_Authorised).
- New routing information is received when a Busy or not reachable event (DP T\_Busy) or a No Answer event (DP T\_No\_Answer) is reported from the Terminating Call Handling PIC.
- New routing information is received when a Disconnect event is reported from the T\_Active PIC.

NOTE: The HLR may use MAP signalling to indicate to the GMSC before the call is extended to the destination VMSC that the terminating party is not reachable, or the destination VMSC may use telephony signalling to indicate to the GMSC after the call has been extended to the destination VMSC that the terminating party is not reachable.

Actions:

- The response from the HLR or VLR is analysed.
- Routing address and call type are interpreted. The next route or terminating access is selected.
- The Call Forwarding supplementary service is invoked if necessary.

Exit events:

- The call is accepted and answered by terminating party; this leads to the T\_Answer DP.
- An indication is received that the called party is being alerted; this leads to the Call\_Accepted DP.
- An exception condition is encountered; this leads to the T\_Exception PIC. Example exception conditions: the call setup to the MSC or GMSC was not successful.
- The calling party abandons the call; this leads to the T\_Abandon DP.
- The terminating access is busy in the VMSC or a busy indication is received from the destination exchange in the GMSC; this leads to the T\_Busy DP.
- A not reachable event detected or failure of attempt to select the route for the terminating leg in the GMSC fails or the MS cannot be reached in the VMSC; this leads to the T\_Busy DP.
- The no reply timer expires; this leads to the T\_No\_Answer DP.

#### 4.4.3.1.1.3 T\_Alerting

Entry events:

- Called party is being alerted (DP Call\_Accepted)
- Continue is received in T\_Mid\_Call DP.

## Actions:

- Waiting for the call to be answered by terminating party.
- The Call Forwarding supplementary service is invoked if necessary.
- Send a notification to the gsmSCF if the terminating party changes position and DP T\_Change\_Of\_Position is armed.

## Exit events:

- The call is accepted and answered by terminating party; this leads to the T\_Answer DP.
- An exception condition is encountered; this leads to the T\_Exception PIC. Example exception conditions: the call setup to the MSC or GMSC was not successful.
- The calling party abandons the call; this leads to the T\_Abandon DP.
- A busy indication (UDUB) is received from the destination exchange; this leads to the T\_Busy DP.
- A not reachable event is detected or the attempt to select the route for the terminating leg in the GMSC fails or the MS cannot be reached in the VMSC; this leads to the T\_Busy DP.
- The no reply timer expires; this leads to the T\_No\_Answer DP.
- A Call Party Handling information flow is executed; this leads to the T\_Mid\_Call DP.

## 4.4.3.1.1.4 T\_Active

## Entry events:

- Indication that the call is accepted and answered by the terminating party. (DP T\_Answer).
- Continue is received in T\_Mid\_Call DP.

## Actions:

- Connection established between originating party and terminating party. Call supervision is being provided.
- Send a notification to the gsmSCF if the terminating party changes position and DP T\_Change\_Of\_Position is armed.
- Wait for call release.

## Exit events:

- A disconnection indication is received from the terminating party, or received from the originating party via the originating half BCSM; this leads to the T\_Disconnect DP.
- An exception condition is encountered. In addition to the specific examples listed above, exception events include any type of failure that means that the normal exit events for a PIC cannot be met.
- A service/service feature request is received from the called party (DTMF) or a Call Party Handling information flow is executed; this leads to the T\_Mid\_Call DP.

## 4.4.3.1.1.5 T\_Exception

## Entry events:

- An exception condition is encountered. In addition to the specific examples listed above, exception events include any type of failure, which means that the normal exit events for PIC cannot be met.

## Actions:

- Default handling of the exception condition is being provided. This includes general actions necessary to ensure that no resources remain inappropriately allocated such as:
  - If any relationship exists between the gsmSSF and the gsmSCF, the gsmSSF shall send an error information flow closing the relationships and indicating that any outstanding call handling instructions will not run to completion.
  - The GMSC or VMSC / gsmSSF should make use of vendor-specific procedures to ensure release of resources within the GMSC or VMSC / gsmSSF, so that line, trunk and other resources are made available for new calls.

Exit events:

- Default handling of the exception condition by gsmSSF/GMSC is completed.

#### 4.4.4 Rules for Implicit Disarming of Event Detection Points

The tables below give the rules for implicit disarming of event detection points.

Implicit EDP disarming rules are specified in the tables below for Originating BCSM and Terminating BCSM respectively. Each table specifies which EDP's shall be disarmed (i.e. MonitorMode set to Transparent) if/when each EDP is encountered, irrespective of the EDP's Monitor Mode (Transparent, Notify And Continue, or Request).

When EDPs armed with MonitorMode 'Request' (EDP-Rs) are encountered, any implicit EDP disarming shall take place before reporting the EDP and transiting the gsmSSF to the Waiting\_For\_Instruction state (if not already suspended in the Wwaiting\_For\_Instruction state).

If the BCSM has encountered DP O/T\_Answer then an originator release must be detected as a DP O/T\_Disconnect.

The table entry 'X' means that if the DP is encountered (independently of arming and reporting to the gsmSCF) the marked DP is implicitly disarmed.

It shall be possible to rearm explicitly an implicitly disarmed DP, e.g. for follow on call.

**Table 4.4: Implicit disarmed DPs in the O-BCSM**

Encountered DP	Implicit disarmed DPs									
	Route_Select_Failure	O_Busy	O_No_Answer	O_Answer	O_Mid_Call Leg 1	O_Disconnect Leg 1	O_Disconnect any other Leg	O_Abandon	O_Term_Seized	O_Change_Of_Position
Route_Select_Failure	X	X	X	X			X		X	
O_Busy	X	X	X	X			X		X	
O_No_Answer	X	X	X	X			X		X	
O_Answer	X	X	X	X				X	X	
O_Mid_Call Leg 1 (note 1)					X					
O_Disconnect Leg 1					X	X		X		X
O_Disconnect any other Leg	X	X	X	X			X		X	
O_Abandon					X	X		X		X
O_Term_Seized									X	
O_Change_Of_Position (note 1)										X
Note 1	If the Automatic Rearm IE was present in the Request Report BCSM Event information flow for the O_Change_Of_Position DP or the O_Mid_Call DP and armed as EDP-N, then the DP shall be automatically rearmed by the gsmSSF when it is encountered.									

Table 4.5: Implicit disarmed DPs in the T-BCSM

Encountered DP	Implicit disarmed DPs								
	T_Busy	T_No_Answer	T_Answer	T_Mid_Call Leg 2	T_Disconnect any other Leg	T_Disconnect Leg 2	T_Abandon	Call_Accepted	T_Change_Of_Position
T_Busy	X	X	X	X		X		X	X
T_No_Answer	X	X	X	X		X		X	X
T_Answer	X	X	X				X	X	
T_Mid_Call Leg 2 (note 1)				X					
T_Disconnect any other Leg					X		X		
T_Disconnect Leg 2	X	X	X	X		X		X	X
T_Abandon					X		X		
Call_Accepted								X	
T_Change_Of_Position (note 1)									X
Note 1	If the Automatic Rearm IE was present in the Request Report BCSM Event information flow for the T_Change_Of_Position DP or the T_Mid_Call DP and armed as EDP-N, then the DP shall be automatically rearmed by the gsmSSF when it is encountered.								

#### 4.4.5 BCSM Modelling of Call Scenarios

This subclause describes how the BCSMs defined above are used to model CS call scenarios. For each scenario the used and unused BCSMs involved in the call are shown.

In some cases these models may have an allocation to physical nodes different from that shown. However, the physical separation of the logical functions shown shall not impact the modelling. This subclause describes the call scenarios without optimal routing. If optimal routing is invoked then the physical configurations may be different from those shown, but the modelling is not changed.

CAMEL may be applied simultaneously and independently for each subscriber involved in a call. This is not shown in these scenarios.

Subscribers other than those being served by CAMEL may be either PSTN subscribers, other subscribers or any other addressable subscriber.

##### 4.4.5.1 Mobile Originated Call

For the call from A to B, an instance of the O-BCSM will be created in the MSC (labelled "O(A-B)"). If the A-party has an active O-CSI or D-CSI, or the MSC has an active N-CSI, and the trigger criteria, if present, are fulfilled, then a CAMEL control relationship with gsmSCF(1) shall be established.

Figure 4.5: BCSM Scenario for Mobile Originated Call

4.4.5.2 Mobile Terminated Call at the GMSC or VMSC

For the call from A to B, an instance of the T-BCSM will be created in the GMSC (labelled "T(A-B)") and an instance of the T-BCSM will be created in the VMSC (labelled "T(A-B)").  
 If the B-party has an active T-CSI in the GMSC and the trigger criteria, if present, are fulfilled, then a CAMEL control relationship between the GMSC and the gsmSCF(1) shall be established. If the B-party has an active VT-CSI in the VMSC and the trigger criteria, if present, are fulfilled, then a CAMEL control relationship between the VMSC and the gsmSCF(2) shall be established.

The relationships with gsmSCF (1) and gsmSCF(2) may exist simultaneously. The two gsmSCF endpoints of the relationships are treated independently.

The nodes gsmSCF (1) and gsmSCF (2) may be the same or different entities.

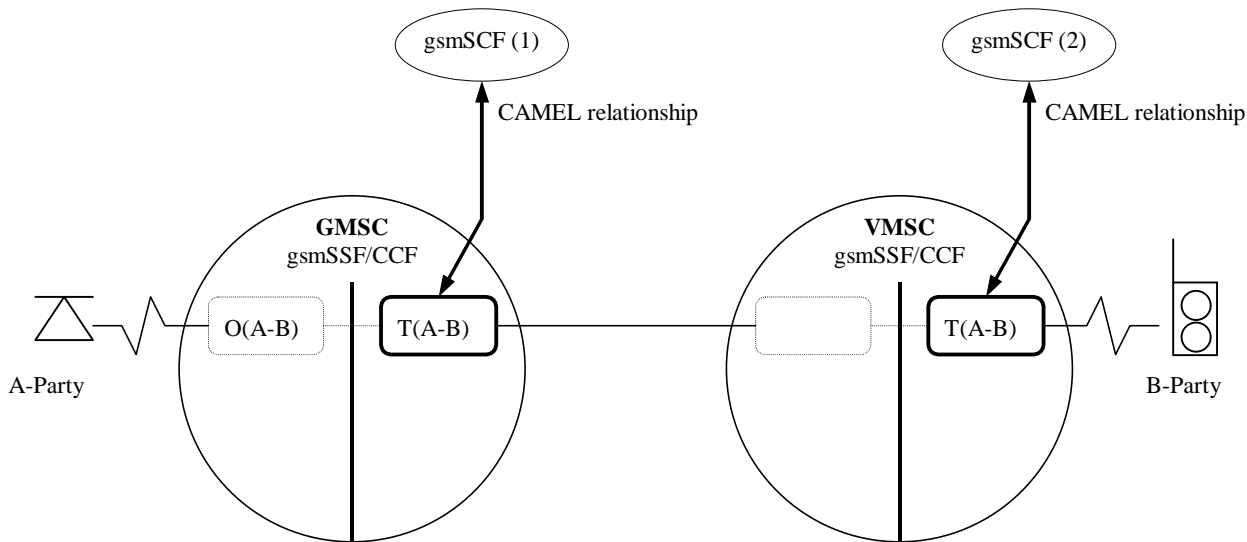

Figure 4.6: BCSM Scenario for Mobile Terminated Calls at the GMSC or VMSC

4.4.5.3 Call Forwarding at the GMSC or VMSC

If the B-party has an active T-CSI in the GMSC or VT-CSI in the VMSC and the trigger criteria, if present, are fulfilled, then a CAMEL control relationship between the GMSC or VMSC and the gsmSCF(1) shall be established.

Following processing at the GMSC or VMSC the call will be extended to the VMSC serving the B-party. This VMSC may be physically integrated with the GMSC.

A new call leg to a "C" party shall be created if:

- a Call Forwarding supplementary service or Call Deflection supplementary service forwards the call to C. An instance of the O-BCSM O(B-C) will be created for the forwarding leg. If the B-party has an active O-CSI or D-CSI in the GMSC or VMSC, or the GMSC or VMSC has an active N-CSI, and the trigger criteria, if present, are fulfilled, then a CAMEL control relationship between the GMSC or VMSC and the gsmSCF(2) shall be established. If the GMSC or VMSC receives the 'Suppress O—CSI' parameter, then O-CSI shall not be used for the forwarding leg or deflecting leg; or
- a CAMEL service in a control relationship with T(A-B) performs a CAMEL-based call forwarding by using a Connect information flow. An instance of the O-BCSM O(B-C) will be created for the forwarding leg. If the B-party has an active O-CSI or D-CSI in the GMSC or VMSC, or the GMSC or VMSC has an active N-CSI, and the trigger criteria, if present, are fulfilled, then a CAMEL control relationship between the GMSC or VMSC and the gsmSCF(2) shall be established. The O-CSI shall be used for the forwarding leg only if the last Connect information flow includes the "O-CSI applicable" flag.

The relationship with gsmSCF (1) and the relationship with gsmSCF(2) may exist simultaneously. The two relationships are treated independently at the GMSC. The instance of the BCSM T(A-B) and the instance of the BCSM O(B-C) are linked by an internal interface which is assumed to behave in a similar way to an ISUP interface.

The nodes gsmSCF (1) and gsmSCF (2) may be the same or different physical entities.

**Figure 4.7: BCSM Scenario for Call Forwarding at the GMSC or VMSC**

#### 4.4.5.4 gsmSCF Initiated Call

When the gsmSCF wishes to originate a new call, the gsmSCF establishes communication with the network using CAP signalling. When the gsmSCF wishes to originate a new leg within an existing call, the gsmSCF uses the already established communication with the gsmSSF. It sends an Initiate Call Attempt information flow which shall contain the address of the called party. Afterwards the gsmSCF shall instruct the gsmSSF to continue with the call processing. The MSC constructs an ISUP Initial Address Message using the parameters received from the gsmSCF and sends it to the destination exchange.

The O-BCSM for the gsmSCF initiated call to B (labelled "O(M-B)") is invoked on request of the gsmSCF. A control relationship with gsmSCF (1) is created for the initiation of a new call.

**NOTE:** The term ISUP is used to denote UNI or NNI signalling system used in a given network.

**Figure 4.8: BCSM Scenario for gsmSCF Initiated New Call**

## 4.5 Procedures for CAMEL

The SDLs in the present document illustrate how CAMEL modifies the normal call handling. They do not attempt to show all the details of call handling in nodes that support CAMEL. Relevant parts of 3GPP TS 23.018 [12] apply in addition to these SDLs. For example, some inputs leading to unsuccessful call attempts are not shown on these diagrams - corresponding clauses in 3GPP TS 23.018 [12] apply.

Note that in some SDL processes and procedures the Release information flow may be sent on both an access interface and an inter-switch interface. If the message is sent on a UNI, its effect is the same as a Release transaction information flow.

The text in this clause is a supplement to the definition in the SDL diagrams; it does not duplicate the information in the SDL diagrams.

### 4.5.1 Overall SDL architecture

The following diagrams shows the overall architecture for the SDL diagrams.

Figure 4.9a: Outgoing case (gsmSSF relay)

Figure 4.9b: Outgoing case (direct path gsmSCF to gsmSRF or assist with relay)

## 4.5.2 Handling of mobile originated calls

### 4.5.2.1 Handling of mobile originated calls in the originating MSC

The functional behaviour of the originating VMSC is specified in 3GPP TS 23.018 [12]. The procedures specific to CAMEL are specified in this subclause:

- Procedure CAMEL\_OCH\_MSC\_INIT;
- Procedure CAMEL\_MO\_Dialled\_Services;

- Procedure CAMEL\_OCH\_MSC\_ALERTING;
- Procedure CAMEL\_OCH\_MSC\_ANSWER;
- Procedure CAMEL\_OCH\_MSC1;
- Procedure CAMEL\_OCH\_MSC2;
- Procedure CAMEL\_OCH\_MSC\_DISC1;
- Procedure CAMEL\_OCH\_MSC\_DISC2;
- Procedure CAMEL\_OCH\_MSC\_DISC3;
- Procedure CAMEL\_OCH\_MSC\_DISC4;
- Procedure CAMEL\_OCH\_ETC;
- Procedure CAMEL\_OCH\_CTR;
- Procedure CAMEL\_Start\_TNRy;
- Procedure CAMEL\_Stop\_TNRy;
- Procedure CAMEL\_Store\_Destination\_Address;
- Procedure CAMEL\_Modify\_CUG\_Info;
- Procedure CAMEL\_N\_CSI\_CHECK\_MSC;
- Procedure CAMEL\_OCH\_LEG1\_MSC;
- Procedure CHECK\_DIGIT\_STRING\_MSC;
- Process CAMEL\_OCH\_LEG2\_MSC;
- Process CAMEL\_OCH\_RECONNECT\_MSC;
- Procedure CAMEL\_EXPORT\_LEG\_MSC;
- Process CAMEL\_O\_CHANGE\_OF\_POSITION\_MSC.

NOTE: Procedure CAMEL\_OCH\_MSC\_DISC3 applies to CAMEL Phase 1 only.

The procedure Send\_Access\_Connect\_If\_Required is specified in 3GPP TS 23.018 [12].

The procedure CAMEL\_OCH\_LEG1\_MSC supervises the originating party only. The process CAMEL\_OCH\_LEG2\_MSC supervises the terminating party only. Hence, signals from the BSS are received by the procedure CAMEL\_OCH\_LEG1\_MSC and signals from the destination exchange are received by the process CAMEL\_OCH\_LEG2\_MSC.

The following paragraphs give details on the behaviour of the MSC in the procedures CAMEL\_OCH\_MSC\_INIT, CAMEL\_OCH\_ETC, CAMEL\_OCH\_ANSWER and CAMEL\_Store\_Destination\_Address.

#### 4.5.2.1.1 Actions of the MSC on receipt of Int\_Error

The MSC checks the default Call Handling parameter in the relevant CSI.

If the default call handling is release call, a Release is sent to the MS and an Abort to the VLR. The MSC then releases all call resources and the procedure CAMEL\_OCH\_MSC\_INIT ends.

If the default call handling is continue call, the MSC continues processing without CAMEL support. It sends Send\_Info\_For\_Ongoing\_Call to the VLR and waits in state Wait\_For\_MO\_Call\_Result.

#### 4.5.2.1.2 Actions of the MSC on receipt of Int\_Continue

The MSC continues processing without any modification of call parameters. At DP Analysed\_Information it sends Send Info For Outgoing Call information flow to the VLR and waits in state Wait\_For\_MO\_Call\_Result.

#### 4.5.2.1.3 Actions of the MSC on receipt of Int\_Continue\_With\_Argument

The MSC continues processing with modified call parameters. The MSC shall replace the call parameters by the information received in the Int\_Continue\_With\_Argument signal. Call parameters which are not included in the Int\_Continue\_With\_Argument signal are unchanged.

Signalling limitations or regulatory requirements may require the Calling Partys Category, Generic Number, Original Called Party Number and Redirecting Party ID to be ignored or modified.

#### 4.5.2.1.4 Actions of the MSC on receipt of Int\_Connect

The MSC continues processing with modified call parameters. The MSC shall transparently modify the call parameters with the received information. The MSC then sends a PROGRESS message to the MS. Call parameters which are not included in the Int\_Connect signal are unchanged.

Signalling limitations or regulatory requirements may require the Calling Partys Category, Generic Number, Original Called Party Number and Redirecting Party ID to be ignored or modified.

The network signalling system shall indicate that this is an internal network number.

At DP Collected\_Information the MSC sets the O-CSI suppression parameter. If D-CSI and N-CSI are not present, the MSC sends a Send Info For Outgoing Call to the VLR and waits in state Wait\_For\_MO\_Call\_Result.

At DP Analysed\_Information it sets the D-CSI suppression parameter, sends a Send Info For Outgoing Call to the VLR and waits in state Wait\_For\_MO\_Call\_Result.

#### 4.5.2.1.5 Actions of the MSC on receipt of Int\_Release\_Call

A Release is sent to the MS, an abort to the VLR and a Release is sent to the destination exchange. The release cause received in the Int\_Release\_Call signal is used. The MSC then releases all call resources and the procedure CAMEL\_OCH\_MSC\_INIT ends.

#### 4.5.2.1.6 Actions of the MSC on receipt of Int\_Continue\_Without\_Leg2

If the MSC receives Int\_Continue\_Without\_Leg2 signal from the gsmSSF, in response to an Initial DP information flow, the MSC will continue the handling of the calling party (Leg1) without routeing the call to a destination.

#### 4.5.2.1.7 Action of the MSC in procedure CAMEL\_OCH\_MSC\_ANSWER

If the MSC received a destination address from the GMSC in the ISUP Answer or Connect Message, the MSC relays the destination address to the gsmSSF in the Int\_DP\_O\_Answer signal.

NOTE 1: The sending of e-parameters by the gsmSCF after receiving the DP\_O\_Answer indication may be to late.

NOTE 2: If the MO call is not subject to Basic OR, then the destination address is generated by the MSC. If the MO call is subject to Basic OR, the MSC will receive a destination address from the GMSC in the ISUP Answer or Connect Message.

#### 4.5.2.1.8 Action of the MSC in procedure CAMEL\_OCH\_ETC

In procedure CAMEL\_OCH\_ETC (sheet 2) the MSC will remain in the Wait\_For\_Assisting\_Answer state until it receives an ISUP Answer Message (ANM) or timeout occurs. This is to ensure that a call record is always generated for every successful establishment of a temporary connection to a gsmSRF, especially in the case where the connection is between PLMNs.

NOTE: This means that it may not be possible to access an SRF which does not generate an ISUP Answer Message (ANM).

If a Progress Message is sent towards the MS the progress indicator shall indicate "In Band Information".

#### 4.5.2.1.9 Action of the MSC in procedure CAMEL\_Store\_Destination\_Address

The Int\_Store\_DA signal carries the value of the global variable Destination address and the parameters OR and Forwarding received in the procedure call.

#### 4.5.2.1.10 Procedure CAMEL\_OCH\_LEG1\_MSC

The Int\_DTMF\_Digit\_Received information flow is received from an internal process in the MSC that receives DTMF signalling from the MS. The handling of the internal process that receives DTMF signalling is out of scope of the present document. The playing of the received DTMF tones to the other parties in the call segment is out of scope of the present document.

#### 4.5.2.1.11 Action of the MSC on receipt of Int\_Request\_Notification\_Charging

General handling of the Int\_Request\_Notification\_Charging signal is specified in subclause 4.5.13.

If an Int\_Request\_Notification\_Charging signal is received for leg1 (the calling party) then

- for the total (e-values or units), the total charges (PLMN specific charges and Transit network charges) to be levied to leg1 shall be reported;
- for components (e-values or units), the total charges to be levied to leg1 shall be reported per component.

If an Int\_Request\_Notification\_Charging signal is received for leg2 (the called party) then

- for the total (e-values or units), the charges applicable for leg2 shall be reported in an Int\_Event\_Notification\_Charging signal;
- for components (e-values or units), the charges applicable for leg2 shall be reported per component in an Int\_Event\_Notification\_Charging signal.

#### 4.5.2.1.12 Process CAMEL\_O\_CHANGE\_OF\_POSITION\_MSC

The signals HANDOVER COMPLETE and HANDOVER PERFORMED are specified in 3GPP TS 48.008 [36]. Signals RELOCATION REQUEST ACKNOWLEDGE, LOCATION REPORT and LOCATION REPORTING COMMAND are specified in 3GPP TS 25.413 [31].

#### 4.5.2.2 Handling of mobile originating calls in the originating VLR

The functional behaviour of the originating VLR is specified in 3GPP TS 23.018 [12]. The procedure specific to CAMEL are specified in this subclause:

- Procedure CAMEL\_OCH\_VLR;
- Process CAMEL\_Reconnected\_Call\_VLR.

### Procedure CAMEL\_OCH\_VLR

1(1)

Procedure in the VLR to handle an outgoing call setup.

/\* Signals to/from the left are to/from the MSC \*/

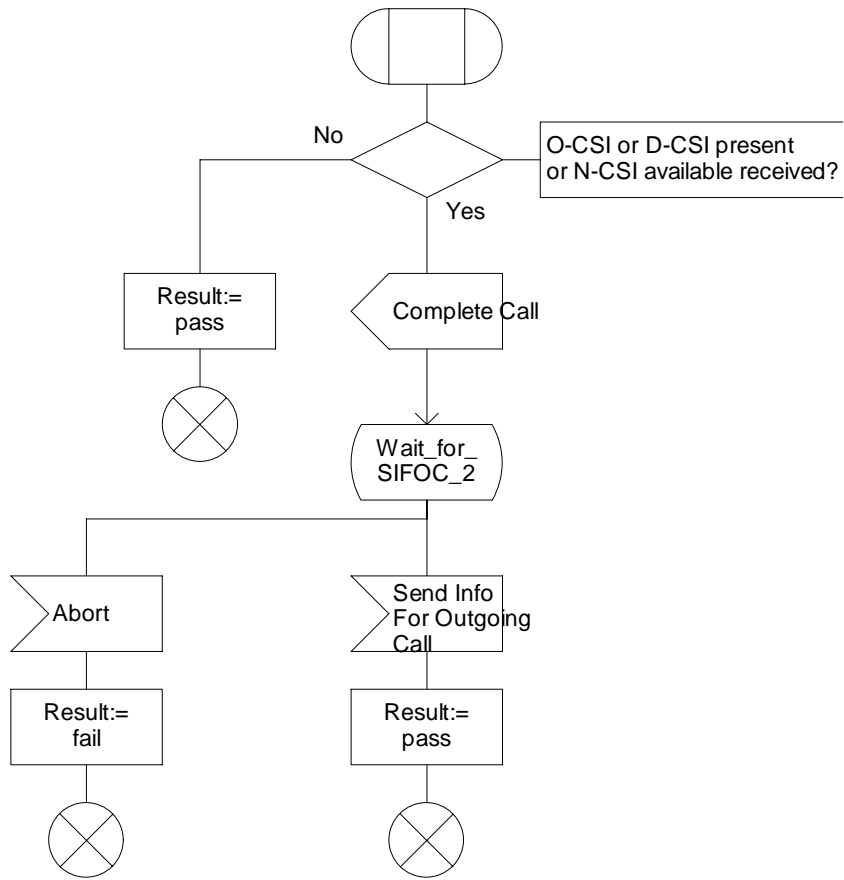

Figure 4.36a: Procedure CAMEL\_OCH\_VLR (sheet 1)

### Process CAMEL\_Reconnected\_Call\_VLR

1(1)

Process in the VLR to handle Send\_Info\_For\_Reconnected\_Call

Signals to/from the left are to/from the MSC.

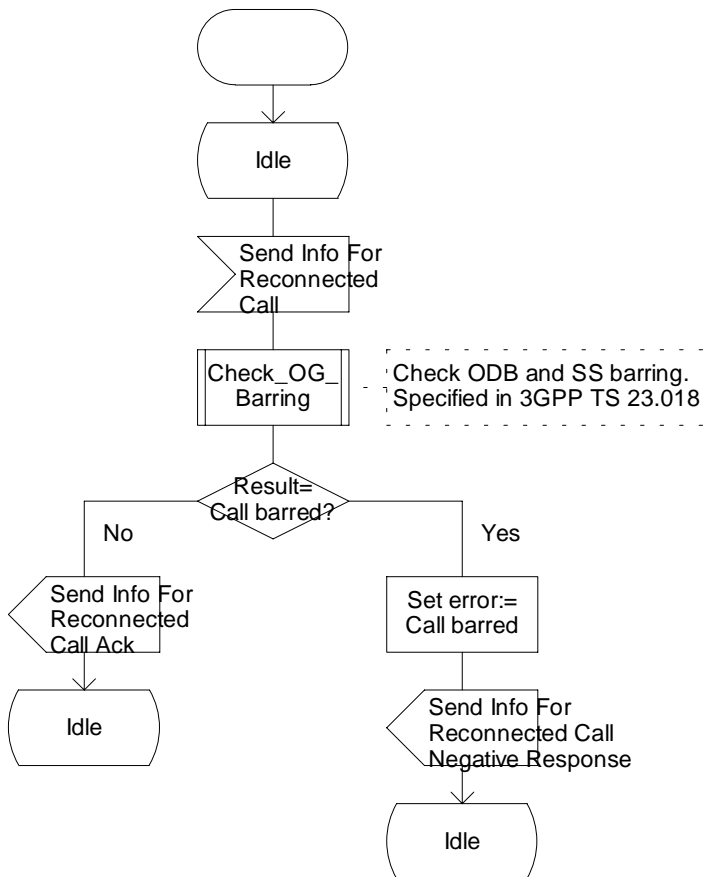

Figure 4.37a: Process CAMEL\_Reconnected\_Call\_VLR (sheet 1)

## 4.5.3 Retrieval of routing information

### 4.5.3.1 Retrieval of routing information in the GMSC

The functional behaviour of the GMSC is specified in 3GPP TS 23.018 [12]. The procedures specific to CAMEL are specified in this subclause:

- Procedure CAMEL\_Set\_ORA\_Parameters;
- Procedure CAMEL\_MT\_GMSC\_INIT;
- Procedure CAMEL\_MT\_MSC\_ALERTING;
- Procedure CAMEL\_MT\_GMSC\_ANSWER;
- Procedure CAMEL\_MT\_GMSC\_DISC1;
- Procedure CAMEL\_MT\_GMSC\_DISC2;
- Procedure CAMEL\_MT\_GMSC\_DISC3;
- Procedure CAMEL\_MT\_GMSC\_DISC4;
- Procedure CAMEL\_MT\_GMSC\_DISC5;
- Procedure CAMEL\_MT\_GMSC\_DISC6;
- Procedure CAMEL\_MT\_CTR;
- Procedure CAMEL\_MT\_ETC;
- Procedure CAMEL\_Start\_TNRy;
- Procedure CAMEL\_Stop\_TNRy;
- Procedure CAMEL\_MT\_GMSC\_Notify\_CF;
- Procedure CAMEL\_MT\_LEG2\_GMSC;
- Process CAMEL\_MT\_LEG1\_GMSC;
- Procedure CAMEL\_MT\_RECONNECT\_GMSC.

NOTE: Procedure CAMEL\_MT\_GMSC\_DISC3 applies to CAMEL Phase 1 only.

The procedure Send\_ACM\_If\_Required is specified in 3GPP TS 23.018 [12].

The procedure CAMEL\_MT\_LEG2\_GMSC supervises the terminating party only. The process CAMEL\_MT\_LEG1\_GMSC supervises the originating party only. Hence, signals from the destination exchange are received by the procedure CAMEL\_MT\_LEG2\_GMSC and signals from the originating exchange are received by the process CAMEL\_MT\_LEG1\_GMSC.

The following paragraphs give details on the behaviour of the GMSC in the procedure CAMEL\_MT\_GMSC\_INIT.

#### 4.5.3.1.1 Action of the GMSC on receipt of Int\_Release\_Call

An ISUP Release message is sent to the originating exchange and resources are released.

#### 4.5.3.1.2 Action of the GMSC on receipt of Int\_Error

The GMSC checks the default call handling parameter in the T-CSI.

If the default call handling is release call, an ISUP Release message is sent to the originating exchange. The MSC then releases all call resources and the procedure CAMEL\_MT\_GMSC\_INIT returns result=fail.

If the default call handling is continue call, the MSC continues call handling without CAMEL support.

#### 4.5.3.1.3 Action of the GMSC on receipt of Int\_Continue

If an FTN has been stored then the information received from the HLR is used to overwrite the corresponding call parameters. Note that the MSISDN is replaced by the FTN as the called party number. The redirection counter is incremented.

If no FTN has been stored then a Send Routeing Info information flow including a T-CSI suppression parameter is sent to the HLR. The Send Routing Info information flow includes an indication of which CAMEL Phases are supported by the GMSC/gsmSSF.

#### 4.5.3.1.4 Action of the GMSC on receipt of Int\_Continue\_With\_Argument

If an FTN has been stored then the information received from the HLR is used to overwrite the corresponding call parameters. The MSISDN is replaced by the FTN as the called party number. The redirection counter is incremented.

If no FTN has been stored then a Send Routeing Info information flow including a T-CSI suppression parameter is sent to the HLR. The Send Routing Info information flow includes an indication of which CAMEL phases are supported by the GMSC/gsmSSF.

The MSC shall replace the call parameters by the information received in the Int\_Continue\_With\_Argument signal. Call parameters which are not included in the Int\_Continue\_With\_Argument message are unchanged.

Signalling limitations or regulatory requirements may require the Calling Partys Category, Generic Number, Original Called Party Number and Redirecting Party ID to be ignored or modified.

#### 4.5.3.1.5 Action of the GMSC on receipt of Int\_Connect

If the Destination Number received from the gsmSCF (via the gsmSSF) is the same as the ISUP called party number, i.e. the MSISDN, the following parameters, if received, are used to overwrite the corresponding ISUP parameters (for mapping see 3GPP TS 29.078 [33]): Calling Partys Category and Generic Number. If received, the Announcement Suppression Indicator is stored. The further processing is described in subclause 4.5.3.1.3 with the addition that the Announcement Suppression indicator, if stored, is sent to the HLR in the Send Routeing Info message.

If:

- the Destination Number received from the gsmSCF (via the gsmSSF) is not the same as the stored ISUP called party number, i.e. the MSISDN, and
- a CUG active indication was received from the HLR, and
- CUG information was received in the ISUP IAM for the incoming call;

then an exception event is reported to the process CS\_gsmSSF, an ISUP Release Message is sent to the originating exchange. The MSC then releases all call resources and the procedure CAMEL\_MT\_GMSC\_INIT returns result=fail.

Otherwise the following parameters, if received, are used to overwrite the corresponding ISUP parameters (for mapping see 3GPP TS 29.078 [33]): Destination Number, Calling Partys Category, Generic Number, Original Called Party ID, Redirecting Party ID and Redirection Information. Call parameters that are not included in the Int\_Connect signal are unchanged.

As a network operator option loop prevention mechanisms may cause the redirection information to be ignored or modified (e.g., if the Redirection counter has been decreased).

Signalling limitations or regulatory requirements may require the Calling Partys Category, Generic Number, Original Called Party Number and Redirecting Party ID to be ignored or modified.

The network signalling system shall indicate that this is an internal network number.

#### 4.5.3.1.6 Action of the GMSC on receipt of Send\_Routeing\_Info Negative Response (in state Wait\_For\_Routeing\_Info\_2)

An exception event is reported to the process CS\_gsmSSF. If the Announcement Suppression indicator has been received from the gsmSCF (via the gsmSSF) any announcements or tones shall be suppressed.

#### 4.5.3.1.7 Action of the GMSC on receipt of Send\_Routeing\_Info ack with MSRN (in state Wait\_For\_Routeing\_Info\_2)

An ISUP IAM with the MSRN as the called party number is constructed.

#### 4.5.3.1.8 Action of the GMSC on receipt of Send\_Routeing\_Info ack with FTN (in state Wait\_For\_Routeing\_Info\_2)

The information received from the HLR is used to overwrite the corresponding call parameters (for details see 3GPP TS 23.018 [12]). The redirection counter is incremented.

#### 4.5.3.1.9 Action of the GMSC on receipt of Send\_Routeing\_Info ack with O-CSI and/or D-CSI and FTN (at state Wait\_For\_Routeing\_Info\_2)

The information received from the HLR is used to overwrite corresponding call parameters. The redirection counter is incremented. The Called Party Number is set to the FTN. The O-CSI and/or D-CSI is stored.

#### 4.5.3.1.10 Action of the GMSC in procedure CAMEL\_MT\_ETC

In the procedure CAMEL\_MT\_ETC (sheet 2) the GMSC will remain in the Wait\_For\_Assiting\_Answer state until it receives an ISUP Answer Message (ANM) or timeout occurs. This is to ensure that a call record is always generated for every successful establishment of a temporary connection to a gsmSRF, especially in the case where the connection is between PLMNs.

NOTE: This means that it may not be possible to access an SRF which does not generate an ISUP Answer Message (ANM).

If a Progress Message is sent towards the MS the progress indicator shall indicate "In Band Information".

#### 4.5.3.1.11 Action of the GMSC in procedure CAMEL\_MT\_GMSC\_Notify\_CF

The Forwarding reason is taken from the Send Routeing Info ack information flow (for early call forwarding) or the Resume Call Handling information flow (for Optimal Routeing of Late Call Forwarding).

The Int\_DP\_T\_No\_Answer signal and Int\_DP\_T\_Busy signal include a parameter to indicate that the call has encountered conditional call forwarding. The gsmSSF will transfer this parameter to the Event Report BCSM information flow which it sends to the gsmSCF.

#### 4.5.3.1.12 Action of the GMSC on receipt of Int\_Request\_Notification\_Charging

General handling of the Int\_Request\_Notification\_Charging signal is specified in subclause 4.5.13.

If an Int\_Request\_Notification\_Charging signal is received for served subscriber then

- for the total (e-values or units), the charges applicable for served subscriber shall be reported in an Int\_Event\_Notification\_Charging signal;
- for components (e-values or units), the charges applicable for served subscriber shall be reported per component in an Int\_Event\_Notification\_Charging signal.

#### 4.5.3.1.13 Action of the MSC on receipt of Int\_Continue\_Without\_Leg2

If the MSC receives Int\_Continue\_Without\_Leg2 signal from the gsmSSF, in response to an Initial DP information flow, the MSC will continue the handling of the calling party (Leg1) without routeing the call to a destination.

### Procedure CAMEL\_Set\_ORA\_Parameters

#### 4.5.3.2 Retrieval of routing information in the HLR

The functional behaviour of the HLR is specified in 3GPP TS 23.018 [12]. The procedures specific to CAMEL are specified in this subclause:

- Procedure CAMEL\_HLR\_INIT;
- Procedure CAMEL\_CSI\_Check\_HLR;
- Procedure CAMEL\_O\_CSI\_CHECK\_HLR;
- Procedure CAMEL\_D\_CSI\_CHECK\_HLR;
- Procedure CAMEL\_T\_CSI\_CHECK\_HLR;
- Procedure CAMEL\_CHECK\_SII2\_CDTI.

The procedure CAMEL\_Provide\_Subscriber\_Info is specified in subclause 4.5.9.

Procedure CAMEL\_HLR\_INIT

1(1)

Procedure in the HLR to handle a request for routing information for an MT call.

Figure 4.54a: Procedure CAMEL\_HLR\_INIT (sheet 1)

### Procedure CAMEL\_CSI\_Check\_HLR

1(1)

/\* This procedure in the HLR to perform the handling for a forwarded CAMEL call. \*/

## Procedure CAMEL\_O\_CSI\_CHECK\_HLR

1(1)

/\* Procedure in the HLR to check the O-CSI and set the O-CSI parameter for SRI ack accordingly. \*/

**Note 1:**

In case of GSM call forwarding, as an implementation option, the HLR may perform conditional triggering check for DP Collected Info services in O-CSI.

If the check passes, O-CSI shall be sent to the GMSC without conditional triggering criteria for DP Collected info. If the check fails, DP Collected Info triggers shall not be sent to the GMSC.

**Note 2:**

The HLR shall not send O-CSI data to the GMSC if the GMSC does not support the indicated CAMEL Capability Handling in O-CSI.

Figure 4.56a: Procedure CAMEL\_O\_CSI\_CHECK\_HLR (sheet 1)

### Procedure CAMEL\_D\_CSI\_CHECK\_HLR

1(1)

/\* Procedure in the HLR to check the D-CSI and set the D-CSI parameter for SRI ack accordingly. \*/

### Procedure CAMEL\_CHECK\_SII2\_CDTI

1(1)

/\* Procedure in the HLR or MSC to determine if the SII2 allows or disallows invocation of Call Forwarding or Call Deflection. \*/

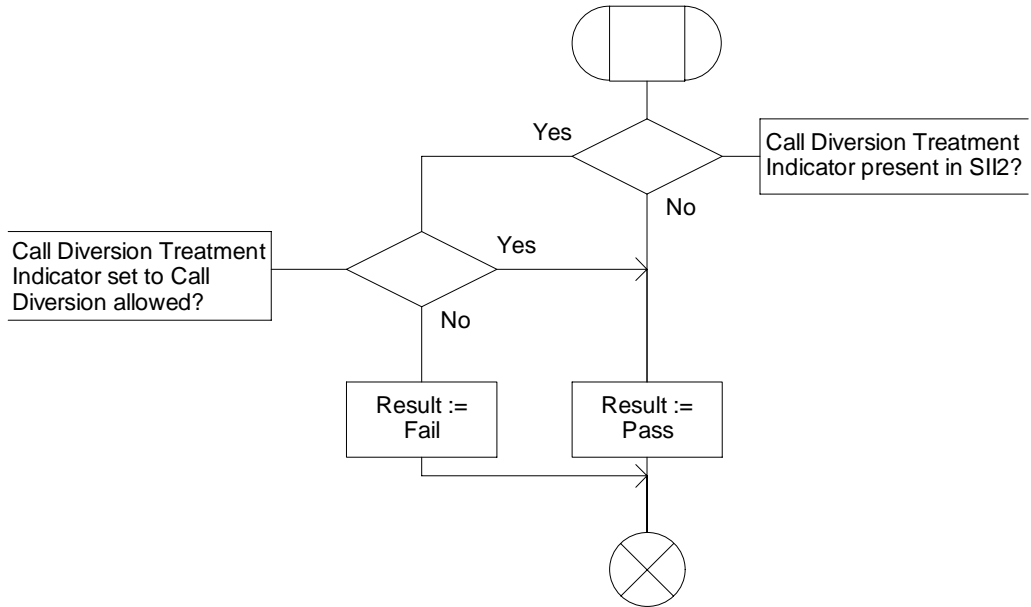

Figure 4.59a: Procedure CAMEL\_CHECK\_SII2\_CDTI (sheet 1)

#### 4.5.3.3 Handling of provide roaming number request in the VLR

The functional behaviour of the VLR is specified in 3GPP TS 23.018 [12]. The procedure specific to CAMEL is specified in this subclause:

- Procedure CAMEL\_SET\_SOA.

### Procedure CAMEL\_SET\_SOA

1(1)

Procedure in the VLR to set the suppression of announcement indicator as required for this call

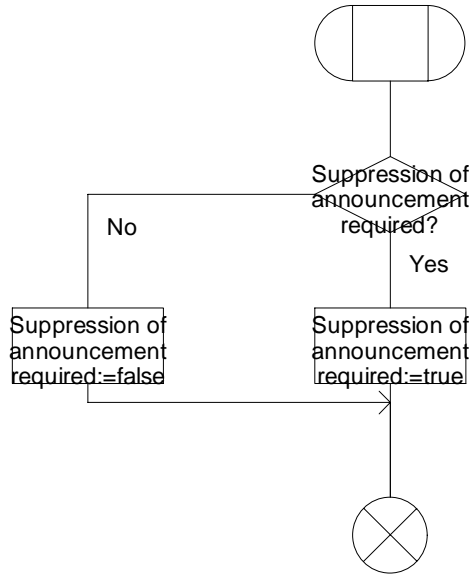

Figure 4.60a: Procedure CAMEL\_SET\_SOA (sheet 1)

## 4.5.4 Handling of mobile terminating calls

### 4.5.4.1 Handling of mobile terminating calls in the terminating VMSC

The functional behaviour of the terminating VMSC is specified in 3GPP TS 23.018 [12].

The behaviour specific to CAMEL is:

- the inclusion of the O-CSI and/or D-CSI parameter in the Perform Call Forwarding information flow sent to the process MT\_CF\_MSC if O-CSI and/or D-CSI was received in the Send Info For Incoming Call ack information flow;
- the requirement to suppress the connection of announcements or tones if the VLR includes the suppression of announcements parameter in the Send Info For Incoming Call negative response information flow.

The processes and procedures specific to CAMEL are specified in this subclause:

- Procedure CAMEL\_ICH\_VLR;
- Procedure CAMEL\_O\_CSI\_Check\_VLR;
- Procedure CAMEL\_D\_CSI\_Check\_VLR;
- Procedure CAMEL\_VT\_CSI\_Check\_VLR;
- Procedure CAMEL\_ICH\_MSC\_INIT;
- Procedure CAMEL\_MT\_VMSC\_Notify\_CF;
- Procedure CAMEL\_ICH\_LEG2\_MSC;
- Procedure CAMEL\_ICH\_LEG2\_CF\_MSC;
- Process CAMEL\_ICH\_LEG1\_MSC;
- Procedure CAMEL\_ICH\_RECONNECT\_MSC;
- Process CAMEL\_T\_CHANGE\_OF\_POSITION\_MSC.

The procedure CAMEL\_ICH\_LEG2\_MSC supervises the terminating party only. The procedure CAMEL\_ICH\_LEG2\_CF\_MSC supervises the forwarded-to party only. The process CAMEL\_ICH\_LEG1\_MSC supervises the originating party only. Hence, signals from the BSS are received by the procedure CAMEL\_ICH\_LEG2\_MSC, signals from the destination exchange are received by the procedure CAMEL\_ICH\_LEG2\_CF\_MSC and signals from the originating exchange are received by the process CAMEL\_ICH\_LEG1\_MSC.

#### 4.5.4.1.1 Action of the VMSC in procedure CAMEL\_MT\_VMSC\_Notify\_CF

The Forwarding reason is taken from the Complete Call information flow from the VLR.

The Int\_DP\_T\_No\_Answer signal and Int\_DP\_T\_Busy signal include a parameter to indicate that the call has encountered conditional call forwarding. The gsmSSF will transfer this parameter to the Event Report BCSM information flow which it sends to the gsmSCF.

#### 4.5.4.1.2 Action of MSC on receipt of Int\_Continue\_Without\_Leg2

If the MSC receives Int\_Continue\_Without\_Leg2 signal from the gsmSSF, in response to an Initial DP information flow, the MSC will continue the handling of the calling party (Leg1) without routing the call to a destination.

#### 4.5.4.1.3 Procedure CAMEL\_ICH\_LEG2\_MSC

The Int\_DTMF\_Digit\_Received information flow is received from an internal process in the MSC that receives DTMF signalling from the MS. The handling of the internal process that receives DTMF signalling is out of scope of the

present document. The playing of the received DTMF tones to the other parties in the call segment is out of scope of the present document.

#### 4.5.4.1.4 Action of MSC on receipt of Int\_Request\_Notification\_Charging

General handling of the Int\_Request\_Notification\_Charging signal is specified in subclause 4.5.13.

If an Int\_Request\_Notification\_Charging signal is received for the served subscriber (leg2, the called party) then

- for the total (e-values or units), the total charges (PLMN specific charges and Transit network charges) to be levied to the served subscriber shall be reported in an Int\_Event\_Notification\_Charging signal;
- for components (e-values or units), the total charges to be levied to served subscriber shall be reported per component in an Int\_Event\_Notification\_Charging signal.

#### 4.5.4.1.5 Process CAMEL\_T\_CHANGE\_OF\_POSITION\_MSC

The signals HANDOVER COMPLETE and HANDOVER PERFORMED are specified in 3GPP TS 48.008 [36]. Signals RELOCATION REQUEST ACKNOWLEDGE, LOCATION REPORT and LOCATION REPORTING COMMAND are specified in 3GPP TS 25.413 [31].

### Procedure CAMEL\_ICh\_VLR

1(1)

/\* This procedure is called in ICH\_VLR (in 3GPP TS 23.018) \*/

/\* Signals to/from the left are to/from the MSC. \*/

Figure 4.61a: Procedure CAMEL\_ICh\_VLR (sheet 1)

### Procedure CAMEL\_O\_CSI\_CHECK\_VLR

1(1)

Procedure in the VLR to check the O-CSI and set the O-CSI parameter for SIFIC ack accordingly.

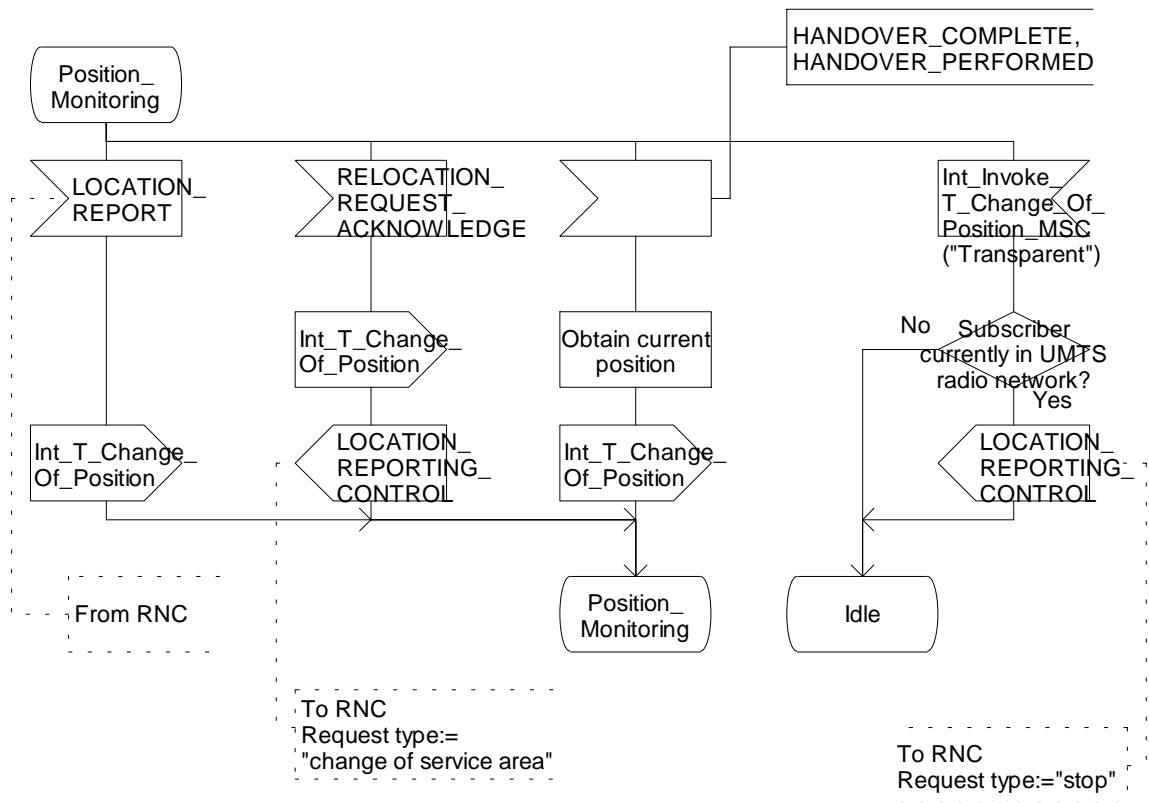

Figure 4.71b: Procedure CAMEL\_T\_CHANGE\_OF\_POSITION\_MSC (sheet 2)

#### 4.5.4.2 Handling of mobile terminating calls in the VLR

The functional behaviour of the terminating VLR is specified in 3GPP TS 23.018 [12]. The process specific to CAMEL is specified in this subclause:

- Process Reconnected\_MT\_Call\_VLR.

The behaviour specific to CAMEL is:

- the inclusion of the O-CSI and/or D-CSI parameter in the Send Info For Incoming Call ack information flow if the call is to be forwarded and O-CSI and/or D-CSI is included in the subscriber data for that subscriber in the VLR;
- the inclusion of the suppression of announcements parameter in the Send Info For Incoming Call negative response information flow if it was received in the Provide Roaming Number information flow from the HLR.

Figure 4.72a: Process Reconnected\_MT\_Call\_VLR (sheet 1)

## 4.5.5 Handling of forwarded calls

The handling of forwarded calls in the GMSC or the terminating VMSC is specified in 3GPP TS 23.018 [12]. The processes and procedures specific to CAMEL are specified in this subclause.

- Procedure CAMEL\_Check\_ORLFCF\_VMSC;
- Procedure CAMEL\_CF\_MSC\_INIT;
- Procedure CAMEL\_CF\_MSC\_ALERTING;
- Procedure CAMEL\_CF\_MSC\_ANSWER;
- Procedure CAMEL\_CF\_ETC;
- Procedure CAMEL\_CF\_CTR;
- Procedure CAMEL\_MT\_CF\_LEG1\_MSC;
- Process CAMEL\_MT\_CF\_LEG2\_MSC;
- Procedure CAMEL\_MF\_RECONNECT\_MSC.

The procedure CAMEL\_MT\_CF\_LEG1\_MSC supervises the originating party only. The process CAMEL\_MT\_CF\_LEG2\_MSC supervises the forwarding-to party only. Hence, signals from the originating exchange are received by the procedure CAMEL\_MT\_CF\_LEG1\_MSC and signals from the destination exchange are received by the process CAMEL\_MT\_CF\_LEG2\_MSC.

A mobile terminated call can be forwarded either in the GMSC (indicated by provision of Forwarded-To-Number from the HLR or gsmSCF) or in the MSC (indicated by provision of Forwarded-To-Number from the VLR).

### 4.5.5.1 Procedure CAMEL\_CF\_MSC\_INIT: handling of Int\_Continue\_With\_Argument

The received parameters are used to overwrite the corresponding ISUP parameters (for mapping see 3GPP TS 29.078 [33]). Call parameters which are not included in the Int\_Continue\_With\_Argument signal are unchanged.

Signalling limitations or regulatory requirements may require the Calling Partys Category, Generic Number, Original Called Party Number and Redirecting Party ID to be ignored or modified.

### 4.5.5.2 Procedure CAMEL\_CF\_MSC\_INIT: handling of Int\_Connect

The received parameters are used to overwrite the corresponding ISUP parameters (for mapping see 3GPP TS 29.078 [33]). Call parameters which are not included in the Int\_Connect signal are unchanged.

As a network operator option, loop prevention mechanisms may cause the redirection information to be ignored or modified (e.g., if the Redirection counter has been decreased).

Signalling limitations or regulatory requirements may require the Calling Partys Category, Generic Number, Original Called Party Number and Redirecting Party ID to be ignored or modified.

The network signalling system shall indicate that this is an internal network number.

### 4.5.5.3 Procedure CAMEL\_CF\_MSC\_INIT: handling of Int\_Continue\_Without\_Leg2

If the MSC receives Int\_Continue\_Without\_Leg2 signal from the gsmSSF, in response to an Initial DP information flow, the MSC will continue the handling of the calling party (Leg1) without routeing the call to a destination.

### 4.5.5.4 Action of the MSC in procedure CAMEL\_CF\_MSC\_ANSWER

If the MSC received a destination address from the GMSC in the ISUP Answer or ISUP Connect Message then the MSC relays the destination address to the gsmSSF in the Int\_DP\_O\_Answer signal.

#### 4.5.5.5 Action of the MSC in procedure CAMEL\_CF\_ETC

In procedure CAMEL\_CF\_ETC (sheet 2) the GMSC or terminating VMSC will remain in the Wait\_For\_Assisting\_Answer state until it receives an ISUP Answer Message (ANM) or timeout occurs. This is to ensure that a call record is always generated for every successful establishment of a temporary connection to a gsmSRF, especially in the case where the connection is between PLMNs.

NOTE: This means that it may not be possible to access an SRF which does not generate an ISUP Answer Message (ANM).

#### 4.5.5.6 Action of MSC on receipt of Int\_Request\_Notification\_Charging

General handling of the Int\_Request\_Notification\_Charging signal is specified in subclause 4.5.13.

If an Int\_Request\_Notification\_Charging signal is received for the served subscriber (the forwarding party) then

- for the total (e-values or units), the total charges (PLMN specific charges and Transit network charges) to be levied to the served subscriber shall be reported in an Int\_Event\_Notification\_Charging signal;
- for components (e-values or units), the total charges to be levied to the served subscriber shall be reported per component in an Int\_Event\_Notification\_Charging signal.

If an Int\_Request\_Notification\_Charging signal is received for leg2 (the forwarded-to party) then

- for the total (e-values or units), the charges applicable for leg2 shall be reported in an Int\_Event\_Notification\_Charging signal;
- for components (e-values or units) ,the charges applicable for leg2 shall be reported per component in an Int\_Event\_Notification\_Charging signal.

Procedure CAMEL\_Check\_ORLCF\_VMSC

1(2)

/\* Procedure in the VMSC TO check which CSIs have to be included in RCH for Optimal Routing of Late Forwarded calls\*/

Notes  
 1. When CAMEL Capability handling is not present in O-CSI, it is assumed to be CAMEL Phase 1.  
 2. When GMSC Supported CAMEL Phases was not received from HLR (in PRN), it is assumed to be CAMEL Phase 1.

If No O-CSI or D-CSI is present in VLR, then non-CAMEL ORLCF shall be invoked.

If the required CAMEL Phases are not supported by GMSC, then Forwarding shall be done in the VMSC. (note 1, 2)

If DP Collected Info criteria are fulfilled, then the DP Collected Info shall be included in RCH. Otherwise, DP Collected Info shall not be included in RCH.

DP Route Select Failure, if available, shall be included in RCH.

## 4.5.6 Handling of gsmSCF initiated calls

### 4.5.6.1 Handling of gsmSCF initiated calls in the MSC

Handling of gsmSCF initiated calls in the MSC involves the following process and procedures:

- Process CAMEL\_ICA\_MSC;
- Procedure CAMEL\_ICA\_MSC\_ALERTING;
- Procedure CAMEL\_ICA\_MSC\_ANSWER;
- Procedure CAMEL\_ICA\_MSC1;
- Procedure CAMEL\_ICA\_MSC2;
- Procedure CAMEL\_ICA\_Dialled\_Services.

The Process CAMEL\_ICA\_MSC handles both gsmSCF initiated new calls and gsmSCF initiated new parties.

The following paragraphs give details on the behaviour of the MSC in the process CAMEL\_ICA\_MSC.

#### 4.5.6.1.1 Actions of the MSC on receipt of Int\_Error

The process CAMEL\_ICA\_MSC returns to idle.

#### 4.5.6.1.2 Actions of the MSC on receipt of Int\_Continue

The MSC continues processing without any modification of call parameters.

#### 4.5.6.1.3 Actions of the MSC on receipt of Int\_Continue\_With\_Argument

The MSC continues processing with modification of call parameters.

#### 4.5.6.1.4 Actions of the MSC on receipt of Int\_Disconnect\_Leg

A Release is sent to the destination exchange if required. The release cause received in the Int\_Disconnect\_Leg signal is used. The process CAMEL\_ICA\_MSC returns to idle.

#### 4.5.6.1.5 Actions of the MSC on receipt of Int\_Release\_Call

A Release is sent to the destination exchange if required. The release cause received in the Int\_Release\_Call signal is used. The MSC then releases all call resources and the process CAMEL\_ICA\_MSC returns to idle.

### Process CAMEL\_ICA\_MSC

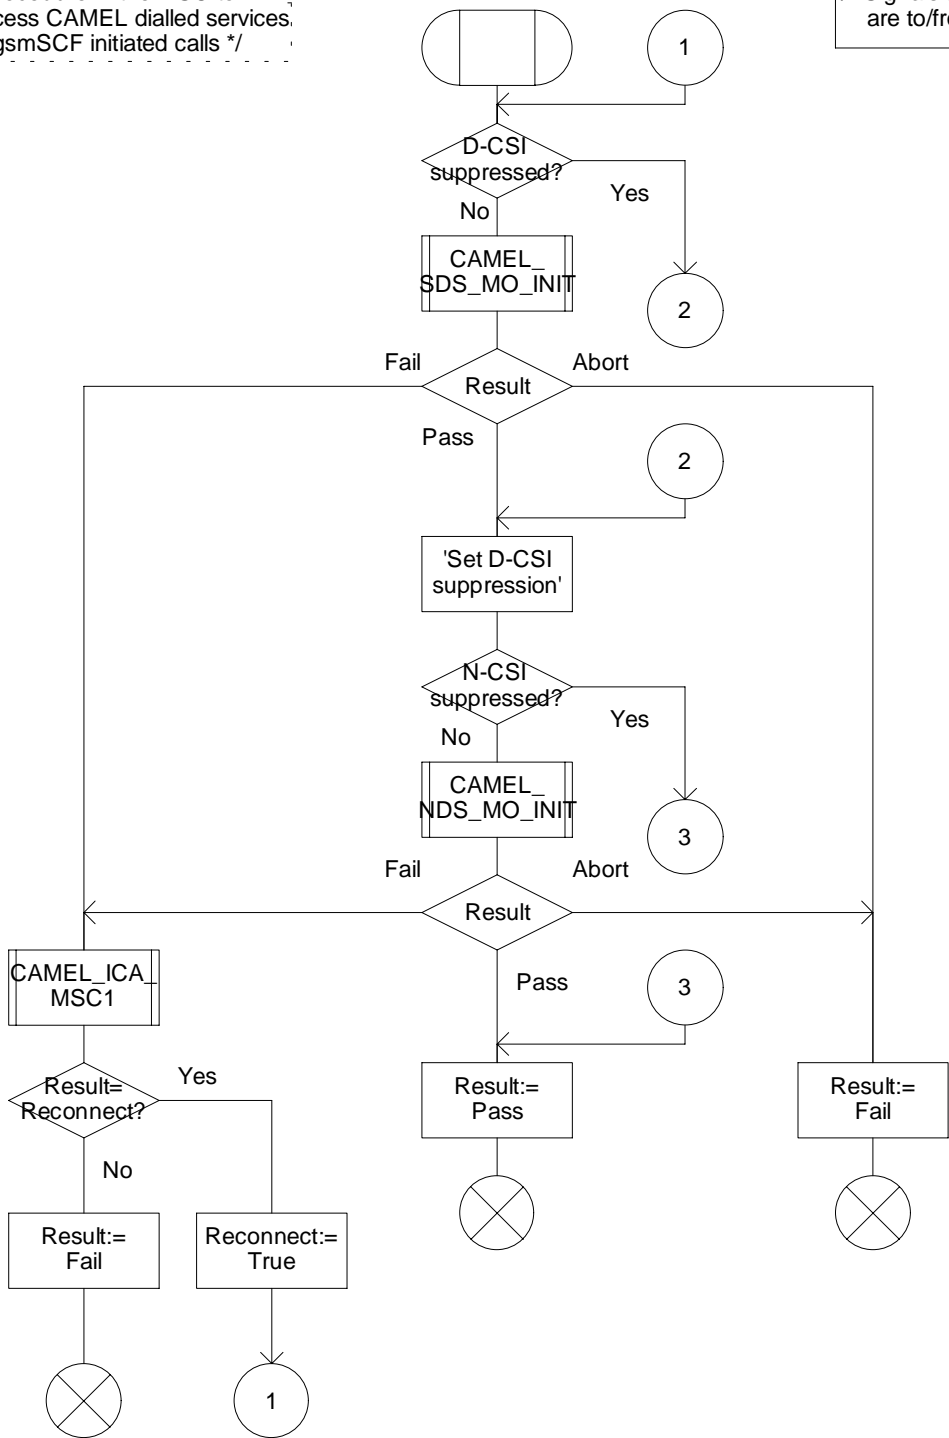

Figure 4.90a: Procedure CAMEL\_ICA\_Dialled\_Services (sheet 1)

#### 4.5.6.2 Handling of gsmSCF initiated calls in the VLR

Handling of gsmSCF initiated calls in the VLR involves the following process and procedures:

- Process CAMEL\_ICA\_VLR.

##### 4.5.6.2.1 Action of the MSC on receipt of Int\_Request\_Notification\_Charging

General handling of the Int\_Request\_Notification\_Charging signal is specified in subclause 4.5.13.

If an Int\_Request\_Notification\_Charging signal is received for the served subscriber in a gsmSCF initiated new call (NC call case) then

- for the total (e-values or units), the charges applicable for the leg shall be reported in an Int\_Event\_Notification\_Charging signal;
- for components (e-values or units), the charges applicable for the leg shall be reported per component in an Int\_Event\_Notification\_Charging signal.

If an Int\_Request\_Notification\_Charging signal is received for a gsmSCF initiated new party in an existing call then

- for the total (e-values or units), the charges applicable for the new party shall be reported in an Int\_Event\_Notification\_Charging signal;
- for components (e-values or units), the charges applicable for the new party shall be reported per component in an Int\_Event\_Notification\_Charging signal.

### Process CAMEL\_ICA\_VLR

1(2)

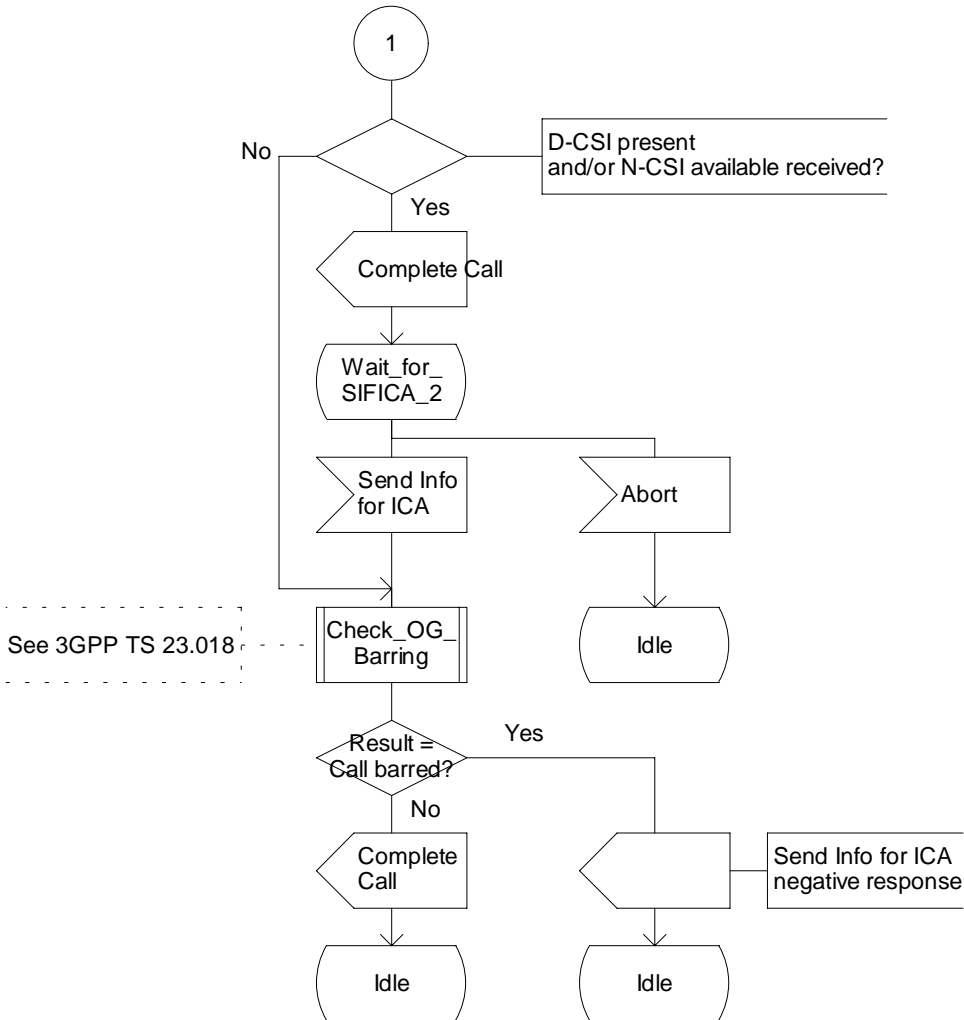

Figure 4.91b: Process CAMEL\_ICA\_VLR (sheet 2)

## 4.5.7 Handling of mobile calls in the gsmSSF

Handling of mobile calls in the gsmSSF involves the following processes and procedures:

- Process CS\_gsmSSF;
- Procedures and process Check\_Criteria;
- Procedure Connect\_To\_Resource;
- Procedure Handle\_AC;
- Procedure Handle\_ACR;
- Procedure Handle\_CIR;
- Procedure Handle\_CIR\_leg;
- Procedure Complete\_FCI\_record;
- Procedure Complete\_all\_FCI\_records;
- Procedure Handle\_SCI;
- Process CSA\_gsmSSF;
- Procedure Handle\_O\_Answer;
- Procedure Handle\_T\_Answer.

The detailed error handling for the process CS\_gsmSSF and the associated procedures is specified in 3GPP TS 29.078 ([33]).

### 4.5.7.1 Call duration control

#### 4.5.7.1.1 Information flow for call duration control

The following diagram shows the handling of the different timers that are used in the process CS\_gsmSSF and in the procedures Handle\_AC, Handle\_ACR, Handle\_CIR. Timers Tssf, Tcp, Tsw, Tw and DELTA are defined in the process CS\_gsmSSF.

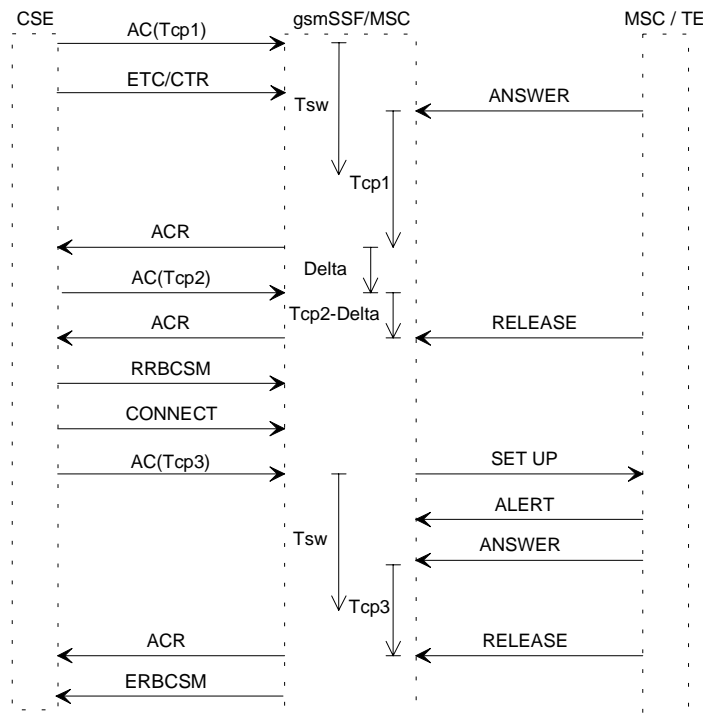

Figure 4.92: Information flow for call control duration

4.5.7.1.2 Audible indicators for call duration control

The gsmSCF may instruct the gsmSSF to play either a fixed sequence of tones or a variable sequence of tones with the Apply Charging information flow. The gsmSCF may also instruct the gsmSSF to play a variable sequence of tones with the Play Tone information flow.

For the case of the fixed sequence of tones, the gsmSSF shall play a single sequence of three tones. The duration of each of the tones shall be 200 milliseconds with an intertone interval of 200 milliseconds. This shall be played 30 seconds before the end of a call period. For the case of a variable sequence of tones, or a burst list, the gsmSCF shall indicate the number of tones per burst, the number of bursts to be played, the tone duration, interval between the tones and the interval between the bursts. In addition, the gsmSCF shall indicate in the Apply Charging information flow, the warning time before call period expiry at which the playing of the burst list shall start. Figure 4.93 provides a graphical representation of the variable burst list in the case where there are three tones per burst and three bursts in the burst list. The Warning Period in figure xx applies to the Apply Charging information flow only.

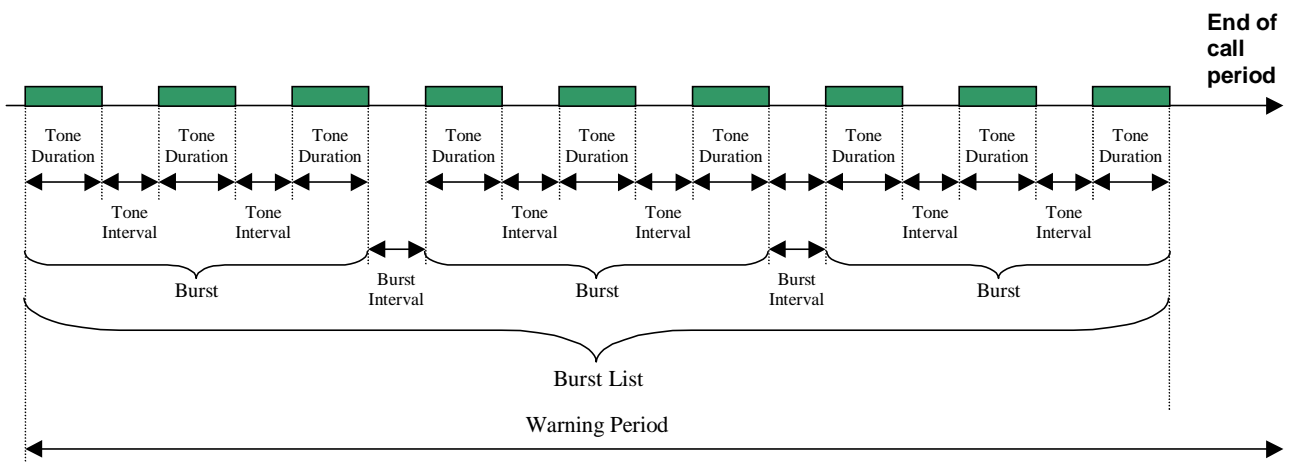

Figure 4.93: Representation of burst list

## 4.5.7.2 The gsmSCF control of e-values

### 4.5.7.2.1 Procedure Handle\_SCI

There are independent Tariff Switch Timers for the control of the call duration Tsw(pty) and for the gsmSCF control of e-values Tsw(SCI). The gsmSCF control of e-values is via the Send Charging Information information flow.

The following terminology has been used for e-parameters:

- Applicable and in use. The set of e-parameters is currently applicable in the MSC and the set has been sent to the MS.
- Applicable but waiting. The set of e-parameters is currently applicable in the MSC but the set has not yet been sent to the MS.
- Applicable but not in use. The set of e-parameters is currently applicable in the MSC but it cannot be sent to the MS, e.g. because the Advice of Charge supplementary service is not subscribed.
- Stored. The set of e-parameters is not yet applicable. The stored set of e-parameters becomes applicable when a tariff switch occurs.

The table below defines the actions of the Procedure Handle\_SCI.

Table 4.6: Handling of SCI in the gsmSSF

received Tsw(SCI) and set of e-parameters in the SCI information flow		Primary dialogue (note 1)				Secondary dialogue (note 2, 8)
		no active call / SRF connection		active call / SRF connection		
		Tsw(SCI) not running and no e-parameters stored	Tsw(SCI) running and e-parameters stored	Tsw(SCI) not running and no e-parameters stored	Tsw(SCI) running and e-parameters stored	
Tsw(SCI) not received	1 set	send 1st set to MSC	stop Tsw(SCI); discard stored set; send 1st set to MSC	send 1st set to MSC	stop Tsw(SCI); discard stored set; send 1st set to MSC	send 1st set to MSC
Tsw(SCI) not received	2 sets	<b>error</b>	<b>error</b>	<b>error</b>	<b>error</b>	<b>error</b>
Tsw(SCI) received	1 set	<b>error</b>	<b>error</b>	store 1st set; start Tsw(SCI)	stop Tsw(SCI); discard stored set; store 1st set; start new Tsw(SCI)	<b>error</b>
Tsw(SCI) received	2 sets	send 1st set to MSC, store 2nd set; start Tsw(SCI)	stop Tsw(SCI); discard stored set; send 1st set to MSC; store 2nd set; start new Tsw(SCI)	<b>error</b>	<b>error</b>	send 1st set to MSC; store 2nd set; start Tsw(SCI)

NOTE 1: Primary dialogue: The primary dialogue is initiated due to TDP Collected\_Info, TDP Analysed\_Information, or TDP Route\_Select\_Failure, TDP Terminating\_Attempt\_Authorised, TDP T\_Busy or TDP T\_No\_Answer. A dialogue initiated due to TDP Analysed\_Information is only the primary dialogue, if there is no ongoing dialogue due to TDP Collected\_Info.

NOTE 2: Secondary dialogue: The secondary dialogue is initiated due to TDP Analysed\_Information.

NOTE 3: The condition "active call / SRF connection" is true if there is at least one active leg in this call (CSA) or if an SRF is connected to a Call Segment in this CSA. Incoming legs are active after an answer is sent and before the leg begins to release. Outgoing legs are active after an answer is received and before the leg is begins to release.

NOTE 4: If the gsmSSF sends a set of e-parameters to the MSC this will overwrite the current set of e-parameters in the MSC, if e-parameters are applicable in the MSC.

NOTE 5: The MSC shall store the received e-parameters to be sent subsequently to the MS. The MSC shall send these e-parameters to the MS in a Connect message or in a Facility message.

NOTE 6: Secondary dialogue gsmSCF can only give e-parameter(s)/Tsw(SCI) when they have not previously been provided by the primary dialogue gsmSCF. After secondary dialogue gsmSCF gives e-parameter(s) / Tsw(SCI), Primary dialogue gsmSCF shall not give further on-line charging instructions (i.e. Send Charging Information).  
For D-CSI, this is ensured by service subscription restriction by a home network operator. For N-CSI, this is ensured by a roaming agreement between the home network operator and the visited network operator or is only applicable within a home network.

NOTE 7: When a gsmSCF relationship is closed then the *stored* e-parameters given by that dialogue are discarded. Any Tariff Switch timer (Tsw(SCI)) is also stopped when the gsmSCF relationship is closed. If the gsmSCF has given any e-parameters which are not *stored* but which are applicable (regardless of whether they are *applicable and in use*, *applicable but waiting*, or *applicable but not in use*) when the gsmSCF relationship is closed, those e-parameters are also valid after the gsmSCF relationship is closed. If any subsequent CAP dialogues give e-parameters those new e-parameters shall overwrite the applicable e-parameters given by the preceding CAP dialogues.

NOTE 8: The secondary dialogue is not applicable to VT calls.

#### 4.5.7.2.2 Process Tsw\_For\_SCI

The process Tsw\_For\_SCI exists per call. That is there is one process instance per CSA. The Tariff Switch Timers for the gsmSCF control of e-values Tsw(SCI).

### Process Tsw\_For\_SCI

1(2)

/\* Signals to/from the left are to/from the MSC of the leg concerned (the CAMEL subscriber); signals to/from the right are to/from the process CS\_gsmSSF of the leg concerned (the CAMEL subscriber. \*/

/\* Timers used in the Tsw\_For\_CSI process:

Tsw(SCI): Timer for tariff switch for the gsmSCF controlled e-values.  
At the expiration of this timer, a new tariff for the gsmSCF controlled e-values shall be started.

The CS\_gsmSSF related to leg of the CAMEL subscriber is setting the timer Tsw(SCI) in the procedure Handle\_SCI).

The timer Tsw(SCI) is stopped on release of the leg of the CAMEL subscriber or when the relationship to the gsmSCF is closed.

\*/

Figure 4.94a: Process Tsw\_For\_SCI (sheet 1)

Process Tsw\_For\_SCI

2(2)

/\* Signals to/from the left are to/from the MSC of the leg concerned (the CAMEL subscriber); signals to/from the right are to/from the process CS\_gsmSSF of the leg concerned (the CAMEL subscriber. \*/

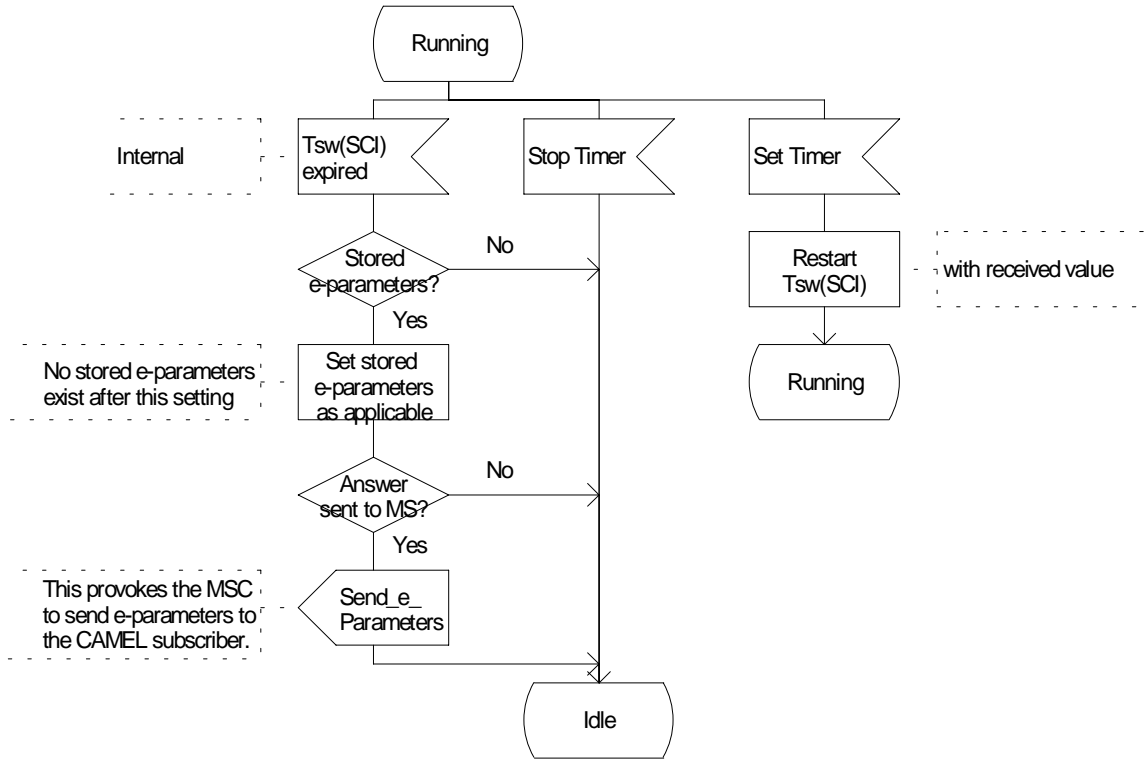

Figure 4.94b: Process Tsw\_For\_SCI (sheet 2)

### 4.5.7.3 Behaviour of the gsmSSF in the process CS\_gsmSSF

The following paragraphs give details on the behaviour of the gsmSSF in the process CS\_gsmSSF.

#### 4.5.7.3.1 Actions of the gsmSSF on receipt of CAP\_Request\_Report\_BCSM\_Event (in the state Waiting\_For\_Instructions)

The process CS\_gsmSSF arms the requested EDP, if the arming rules are fulfilled and returns to the state Waiting\_For\_Instructions.

The gsmSCF may request EDPs for any one or more of Answer, Busy, No Answer, Abandon, Route Select Failure and Disconnect event for a party in the call.

#### 4.5.7.3.2 Actions of the gsmSSF on receipt of CAP\_Continue (in the state Waiting\_For\_Instructions)

An Int\_Continue signal is sent to instruct the GMSC or MSC to continue the call set-up with the original call parameters.

#### 4.5.7.3.3 Actions of the gsmSSF on receipt of CAP\_Release\_Call (in the state Monitoring)

When a control relationship exists between the gsmSCF and gsmSSF (at least one EDP-R is armed), the gsmSCF may spontaneously instruct the gsmSSF to release the call at any time using the Release Call information flow. The Release Call information flow shall not be sent from the gsmSCF if only monitor relationship exists between the gsmSSF and the gsmSCF.

#### 4.5.7.3.4 Actions of the gsmSSF on receipt of Int\_DP\_T\_Busy or Int\_DP\_T\_No\_Answer including the parameter Call Forwarded (in the state Monitoring)

If the handling of Int\_DP\_T\_Busy signal or Int\_DP\_T\_No\_Answer signal including the parameter Call Forwarded leads to the gsmSSF sending a CAP\_Event\_Report\_BCSM to the gsmSCF, the gsmSSF shall include the parameter Call Forwarded in the Event Specific Information BCSM.

### 4.5.7.4 Process CS\_gsmSSF and procedures

## Process CS\_gsmSSF

1(56)

```
/* Invocation of CS_gsmSSF */
```

```
/* Timers used in the CS_gsmSSF process:
```

```
Tssf: Application timer in the ssf.
```

```
The following timers are applicable for call legs as well as for the connected SRF (srf ID).  
That is 'pty' may be a leg ID or an srf ID.
```

```
Tcp(pty): Timer for call period.
```

```
This timer measures the duration of a call period.
```

```
Tsw(pty): Timer for tariff switch.
```

```
At the expiration of this timer, a new tariff shall be started.
```

```
Tw(pty): Warning timer.
```

```
At the expiration of this timer, a warning tone shall be played to the calling party.
```

```
DELTA(pty): time, measured in the CS_gsmSSF, elapsed between the time an
```

```
ApplyChargingReport operation is sent to the gsmSCF and an
```

```
ApplyCharging operation is received from the gsmSCF for that pty.
```

```
Tccd(pty): Control of call duration timer.
```

```
This timer supervises if after sending of ACR a new AC is received for that pty.
```

```
Tccd has a value range of 1 to 20 seconds.
```

```
Ranges for the default values for Tssf.
```

```
- non user interaction Tssf timer value: 1 second to 20 seconds
```

```
- user interaction Tssf timer value: 1 minute to 30 minutes
```

```
*/
```

Figure 4.95a: Process CS\_gsmSSF (sheet 1)

## Process CS\_gsmSSF

2(56)

```
/* Invocation of CS_gsmSSF */
```

```
/* Decision box definition (1)
```

```
'armed TDPs for this CSI?'
```

```
It is questioned whether or not the ongoing call can encounter further TDPs which are indicated in the current CSI.
```

```
'Call to be released?'
```

```
It is questioned whether or not the ongoing call will be released immediately after CS_gsmSSF has responded; that is the ongoing call will not send any signals furtheron to the CS_gsmSSF. NOTE: In this case the CS_gsmSSF shall also go to idle.
```

```
*/
```

```
/* Decision box definitions (2)
```

```
The following decisions are used by procedures in CCF.
```

```
'gsmSSF invoked?'
```

```
Is the CS_gsmSSF process in any state other than Idle?
```

```
*/
```

```
/*
```

```
Note to the task box "Perform implicit disarming of DPs";
```

```
If DP O_Change_Of_Position and/or DP T_Change_Of_Position are disarmed by this task, the CS_gsmSSF sends Int_Invoke_O_Change_Of_Position_MSC to the CAMEL_O_CHANGE_OF_POSITION_MSC and/or Int_Invoke_T_Change_Of_Position_MSC to the CAMEL_T_CHANGE_OF_POSITION_MSC with the parameter "Transparent, respectively.
```

```
*/
```

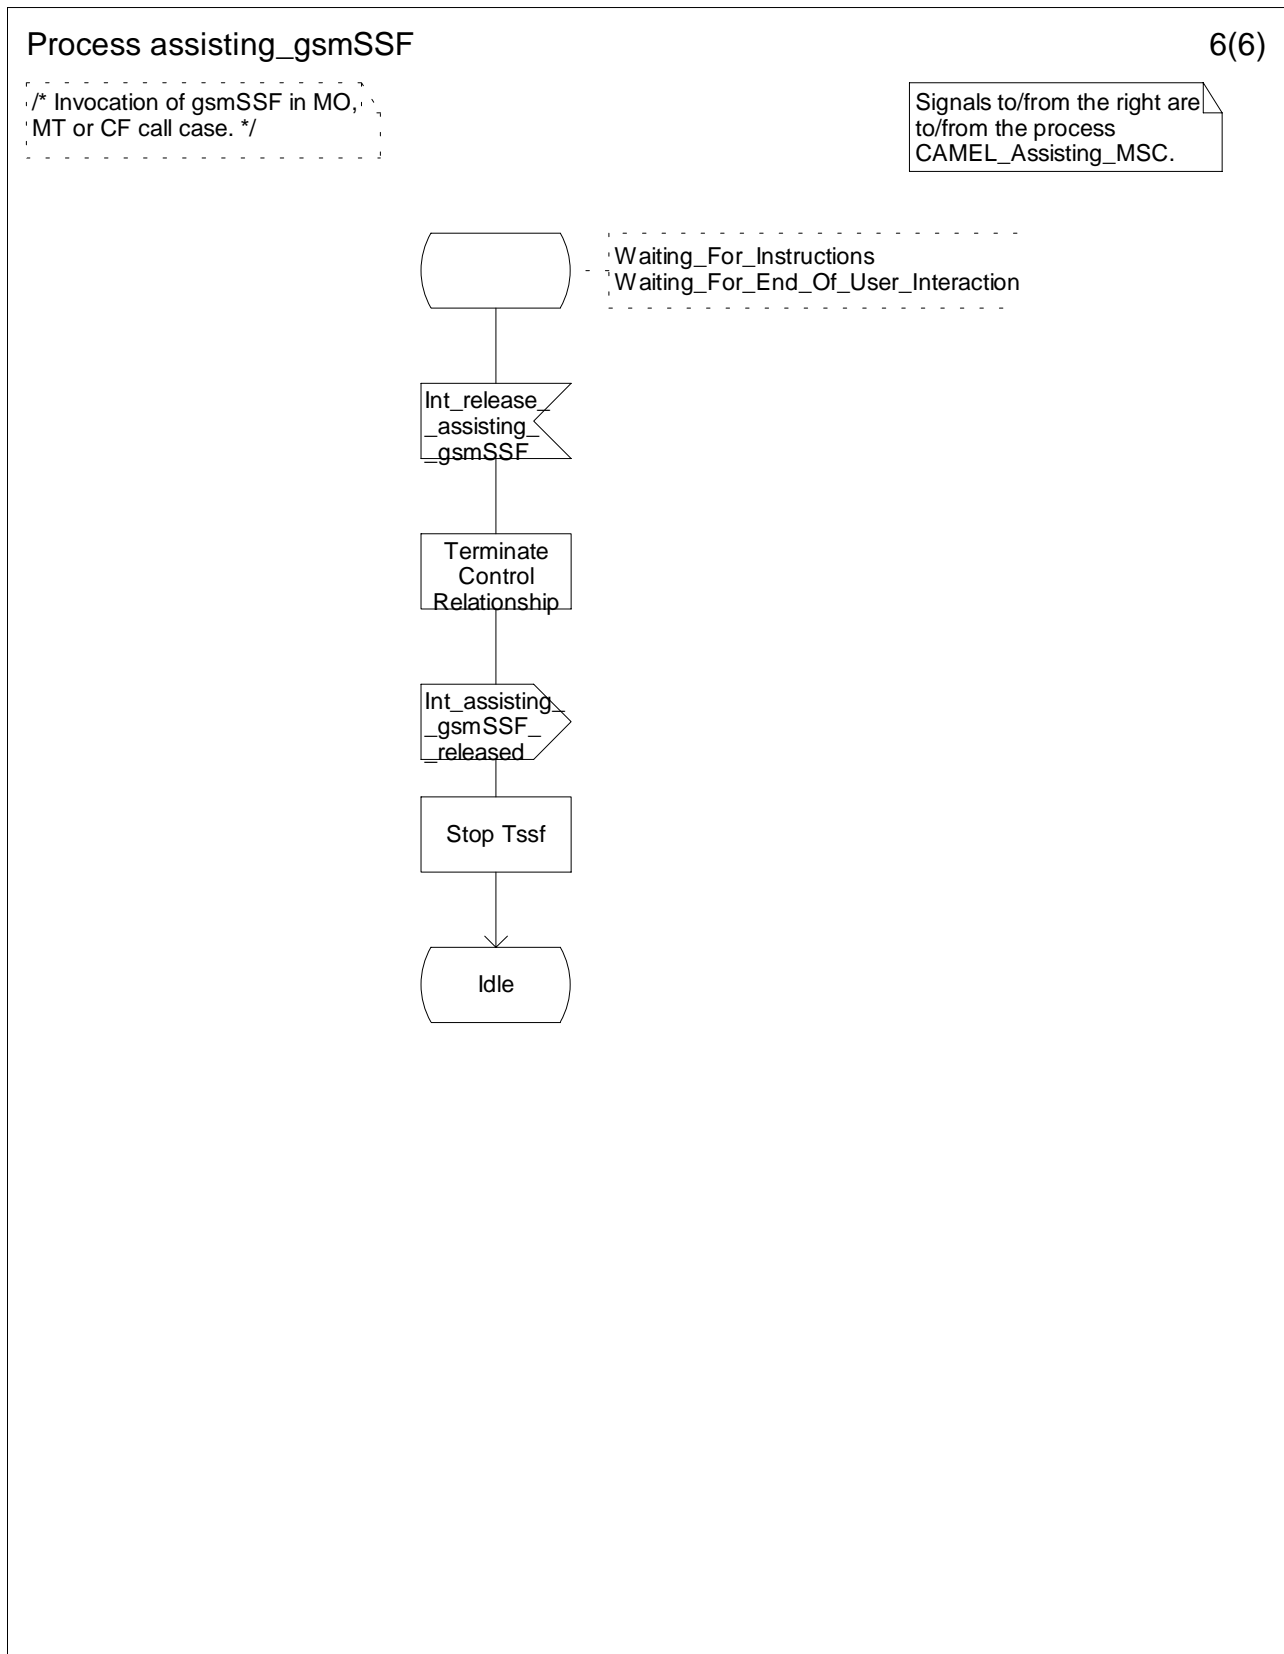

Figure 4.114f: Process Assisting\_gsmSSF (sheet 6)

### 4.5.9 Procedure CAMEL\_Provide\_Subscriber\_Info

The procedure CAMEL\_Provide\_Subscriber\_Info is called either during Retrieval of routing information in the HLR or as a result of reception of the Any Time Interrogation information flow from the gsmSCF.

#### 4.5.9.1 MS reachable

The HLR sends a Provide Subscriber Info information flow to the VLR or SGSN dependent on the setting of the parameter "requested domain" received from the calling process. The HLR waits in state Wait\_For\_Information.

If the VLR or SGSN returns a Provide Subscriber Info ack information flow, then the HLR uses the received information to set the Subscriber Info to be returned to the calling process. As a network option, the HLR may use the received Cell Id or Location Area to derive the location number and/or Geographical Info. The mapping from cell ID and location area to location number is network-specific and outside the scope of the present document.

NOTE: The handling in the VLR of Provide Subscriber Info is defined in 3GPP TS 23.018 [12]. The handling in the SGSN of Provide Subscriber Info is defined in clause 11.

#### 4.5.9.2 MS not reachable in the requested domain

##### 4.5.9.2.1 Location Information requested

If the VLR number or SGSN number is available in the HLR, then the Location Information is set to this parameter only.

If location information is not available in the HLR, then no location information is set.

##### 4.5.9.2.2 Subscriber State requested

The Subscriber State is set to "Network determined not reachable".

#### 4.5.9.3 Actions at state Wait\_For\_Information

The following actions are possible in state Wait\_For\_Information depending on the result of the Provide\_Subscriber\_Info Request sent to VLR or SGSN.

##### 4.5.9.3.1 Provide\_Subscriber\_Info ack

The Location Information or/and the Subscriber State are set to the received information.

##### 4.5.9.3.2 Provide\_Subscriber\_Info Negative Response

If location information was requested, then the VLR number or SGSN number is provided as location information. If the subscriber state was requested, then the subscriber state is set to "not provided from VLR" or "not provided from SGSN".

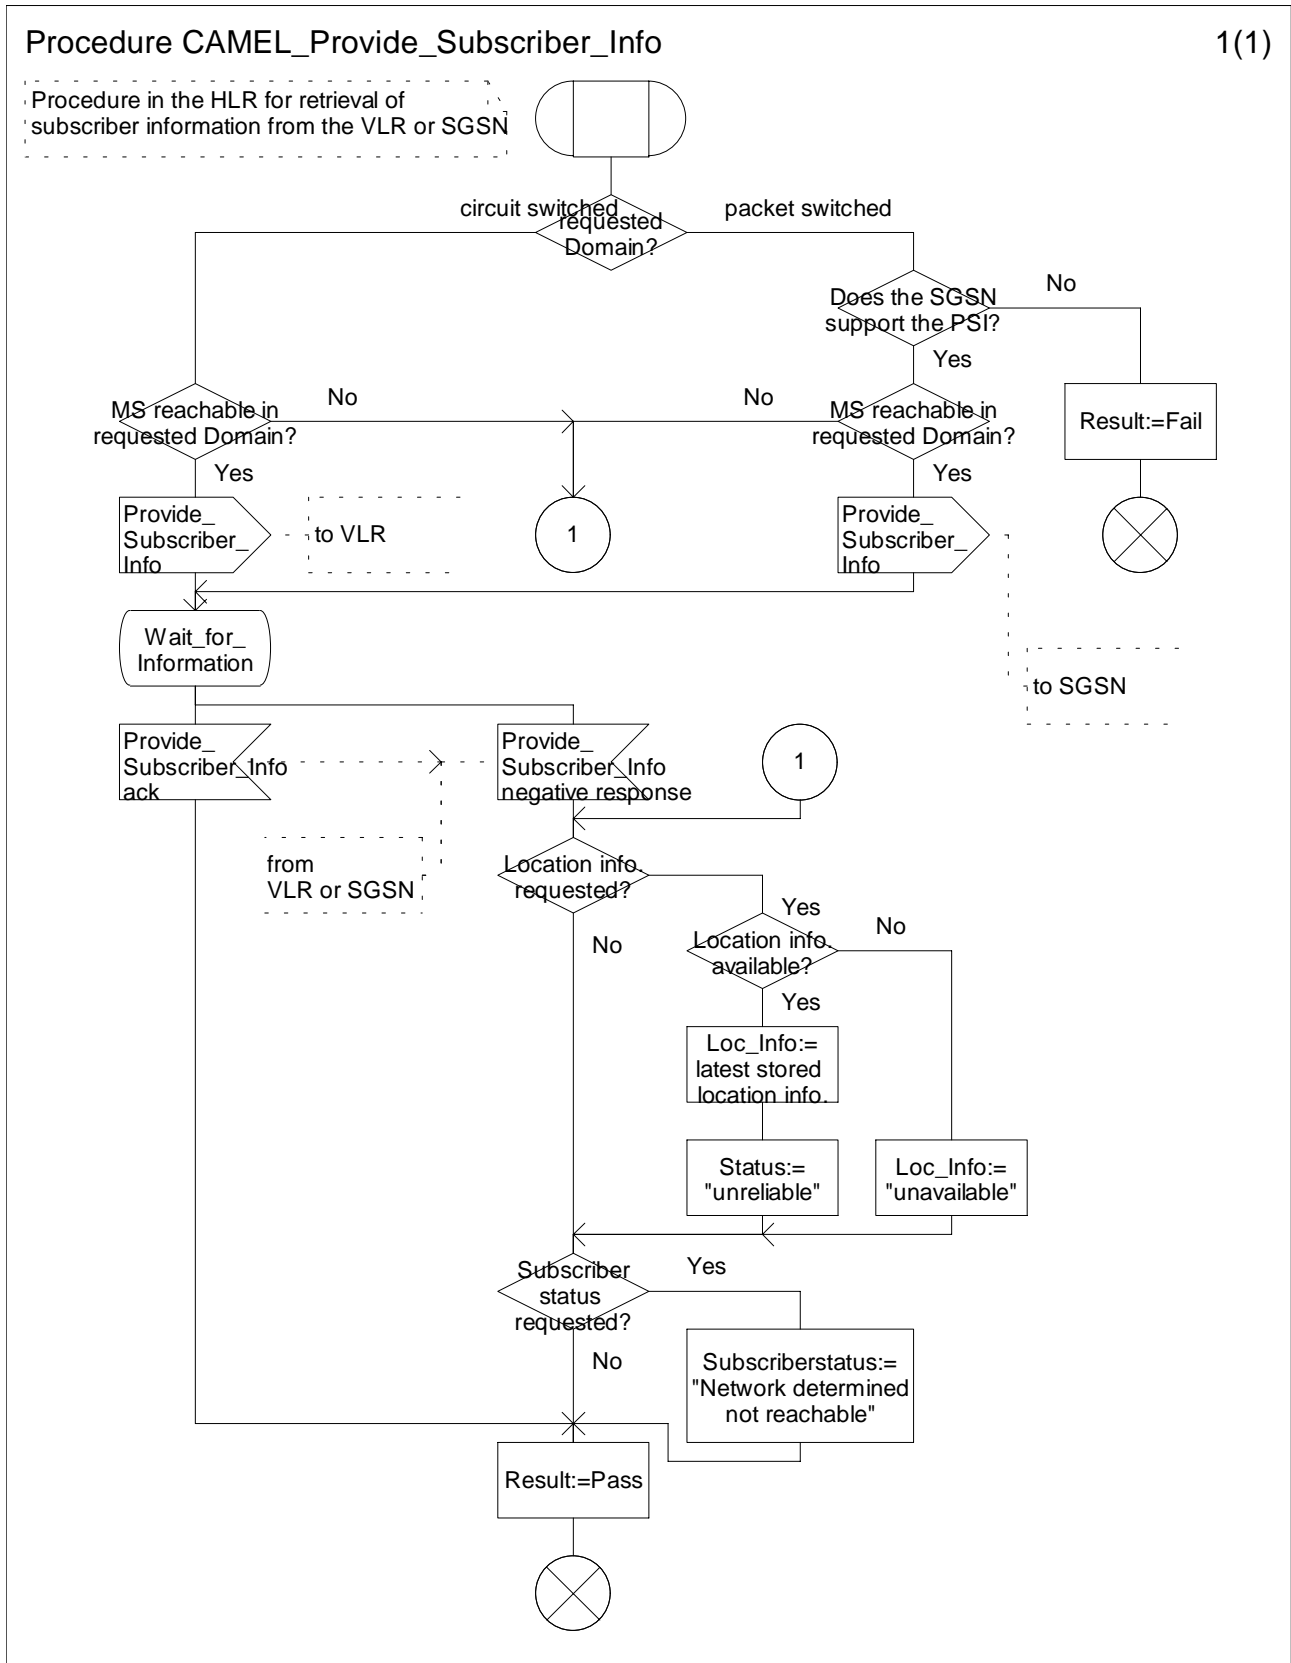

Figure 4.115a: Procedure CAMEL\_Provide\_Subscriber\_Info (sheet 1)

### 4.5.10 CAMEL specific handling of location updating and data restoration

When requesting a location update or data restoration the VLR shall indicate to the HLR which CAMEL phases and which CAMEL phase 4 subsets it supports.

The HLR may then send to the VLR CAMEL subscription data for one of the CAMEL phases supported by the VLR or, if some different handling is required, data for substitute handling.

When the location update has been completed, the MSC/VLR in which the subscriber is registered after the location update shall check the M-CSI. If a Mobility Management notification to the gsmSCF is required for this subscriber, then the MSC/VLR shall send the notification to the gsmSCF.

Refer to subclause 9.2.1 for a description of M-CSI and the conditions under which a notification shall be sent.

#### 4.5.11 Cross phase compatibility

To avoid a case by case fallback between the gsmSSF and the gsmSCF, the gsmSSF shall use the CAP phase corresponding to the CAMEL phase negotiated on the HLR-VLR interface when it opens a dialogue with the gsmSCF. The HLR-VLR negotiation of CAMEL phase is per subscriber.

#### 4.5.12 Handling of North American Carrier Information

The following procedures apply only when the HPLMN of the CAMEL subscriber and either the VPLMN (for a mobile originated or forwarded call) or the IPLMN (for a mobile terminated call or forwarded call) are both North American. A gsmSCF may then provide the gsmSSF with any of the following North American (NA) carrier related information items.

- NA Carrier Information;
- NA Originating Line Information;
- NA Charge Number.

A gsmSSF shall use the received information items both to select any long distance carrier needed for the call and to provide certain information needed by this carrier. Any required information items not received shall be defaulted to those that would normally apply to the call in the absence of an interaction with a gsmSCF.

If any NA information item received from the gsmSCF is found to be invalid, the gsmSSF may either, as an operator option, release the call or behave as if the invalid information item had not been sent.

If the carrier specified in the Carrier parameter is not supported in the VPLMN or IPLMN, the gsmSSF may either, as an operator option, release the call or substitute for the unsupported carrier a preferred carrier of the VPLMN or IPLMN.

Support of the NA Originating Line Information and Charge Number parameters is an operator option in a VPLMN based on roaming agreements with the operators of other PLMNs, A gsmSSF may ignore these items when received from certain or all gsmSCFs located in other PLMNs and replace them with the corresponding default items for an MO, MF, MT or VT call.

#### 4.5.13 Handling of Int\_Request\_Notification\_Charging at MSC

If an Int\_Request\_Notification\_Charging signal is received with "Notify And Continue" mode for a particular leg then the MSC starts monitoring the charging events for the indicated leg. If an Int\_Request\_Notification\_Charging signal is received with "Transparent" mode for a particular leg then the MSC stops monitoring the charging events for the indicated leg. An Int\_Request\_Notification\_Charging signal with "Notify And Continue" mode a particular leg overrides any previous Int\_Request\_Notification\_Charging signal for that leg.

The requested charging events for a particular leg are monitored until one of the following events occurs:

- Request Notification Charging information flow with transparent mode for corresponding event is received.
- The end of leg occurs.

Based on the "Event type Charging" for the leg being monitored and the "reporting condition", the MSC sends the charging notifications to the process CS\_gsmSSF.

1. If the event type charging IE contains "e-values" and the reporting condition IE contains "Occurrence Of Event" then

- The charging notifications are sent when the charging parameters (e-values) applicable for the leg are determined. This is based on the charging information available in the MSC or the charging information received from the charge controlling exchange (from the SS7 network through which the call is being routed);
  - When a new set of charging parameters are applicable for the leg and/or a charging information flow is received from the charge controlling exchange due to a tariff switch, the MSC shall send the next charging notification to the CS\_gsmSSF process.
2. If the event type charging IE contains "Units" and the reporting condition IE contains "threshold" then
    - The charging notifications are sent periodically on accumulation of specified threshold units for the monitored leg and when the leg clears. If there are no pending units to be reported at the end of the leg after the last sent charging notification then no charging notification shall be sent.
  3. If the event type charging IE contains "Units" and the reporting condition IE contains "End Of Connection" then
    - The accumulated charge units for the leg are reported to the process CS\_gsmSSF when the leg clears.

There is at most one charging notification pending for each leg. If the gsmSCF does not require charging for a leg then it will not send a Request Notification Charging information flow for that leg.

NOTE: The interactions between Charging Notifications and SCI are for further study.

## 4.6 Description of information flows

This clause contains the detailed description of the information flows used by CAMEL for Circuit Switched call control.

Each Information Element (IE) is marked as Mandatory (M), Conditional (C), Specific conditions (S), mutually Exclusive (E), Optional (O) or not applicable (-) for each different traffic case: Mobile Originating call (MO), Mobile Forwarded call (MF), Mobile Terminating call in the GMSC (MT), Mobile Terminating call in the VMSC (VT), gsmSCF initiated new call (NC) and gsmSCF initiated new party in an existing call (NP).

An 'M' IE shall always be included for the corresponding traffic case. A 'C' IE shall be included if the sending entity has the necessary information to populate the IE. The conditions for the inclusion of an 'S' IE are shown in the 'Description' column of the definition table. When a set of 'E' IEs is shown in the definition of an Information Flow or compound IE, only one of those IEs may be included. An 'O' IE may be included or omitted as required by the service logic. A '-' IE shall always be omitted for the corresponding traffic case. This categorization is a functional classification, i.e. it defines the requirements for the stage 2 information. It is not a stage 3 classification to be used for the ASN.1 syntax of the protocol.

The distinction between MO, MF, MT, VT, NC and NP calls is not applicable to all Information Flows.

The following principles apply for the handling of the IEs by the receiving entity:

- The gsmSSF shall functionally support all IEs which can be sent to it.
- The gsmSCF may silently discard any IE which it does not functionally support.
- The gsmSRF shall return an error if it does not functionally support an IE which it receives.
- The HLR may silently discard any IE which it does not functionally support.

Details of errors and exceptions to these rules are specified in are specified in 3GPP TS 29.078 [33].

### 4.6.1 gsmSSF to gsmSCF information flows

#### 4.6.1.1 Activity Test ack

##### 4.6.1.1.1 Description

This IF is the response to the Activity Test.

#### 4.6.1.1.2 Information Elements

This IF contains no information elements.

#### 4.6.1.2 Apply Charging Report

##### 4.6.1.2.1 Description

This IF is used by the gsmSSF to report to the gsmSCF the information requested in the Apply Charging IF.

##### 4.6.1.2.2 Information Elements

Information element name	Status	Description
Call Result	M	This IE contains the charging information provided by the gsmSSF.

Call Result contains the following information elements:

Information element name	Status	Description
Time Duration Charging Result	M	This IE is described in a table below.

Time Duration Charging Result contains the following information elements:

Information element name	Status	Description
Time Information	M	This IE is described in a table below.
Party To Charge	M	This IE is received in the related Apply Charging IF to correlate the result to the request. This IE shall be a copy of the corresponding IE received in the Apply Charging IF.
LegID	M	This IE identifies the call party concerned by the Apply Charging IF.
Leg Active	M	This IE indicates whether the call leg is active or not.
Call Leg Released At Tcp Expiry	S	This IE is an indication that the gsmSSF has released the call leg and terminated the dialogue, due to Tcp expiry. It shall be present when Apply Charging Report is sent due to Tcp expiry and the gsmSSF has released the call leg (because 'ReleaselfExceeded' was present in the Apply Charging IF). In all other circumstances, this IE shall be absent.

Time Information contains the following information elements:

Information element name	Status	Description
Time If No Tariff Switch	S,E	This IE shall be present if no tariff switch has occurred since the detection of Answer for the connection to the Called Party, the Temporary Connection, or the SRF connection, otherwise it shall be absent.
Time If Tariff Switch	S,E	This IE shall be present if a tariff switch has occurred since the detection of Answer for the connection to the Called Party, the Temporary Connection, or the SRF connection, otherwise it shall be absent.

#### 4.6.1.3 Call Information Report

##### 4.6.1.3.1 Description

This IF is used to send specific call information for a single call to the gsmSCF as requested by the gsmSCF in a previous Call Information Request IF.

##### 4.6.1.3.2 Information Elements

Information element name	Status	Description
Requested Information List	M	This IE specifies the requested information.
Leg ID	M	This IE indicates the party in the call for which information shall be collected.

#### 4.6.1.4 Disconnect Leg ack

##### 4.6.1.4.1 Description

This IF is the successful response to the Disconnect Leg IF.

##### 4.6.1.4.2 Information Elements

This IF contains no information elements.

#### 4.6.1.5 Entity Released

##### 4.6.1.5.1 Description

This IF is used to inform the gsmSCF about the release of a logical entity (CS or BCSM) caused by exception or errors. It is sent by the CSA FSM if this information cannot be conveyed within a TC\_ABORT or TC\_END because the TC dialogue has to be kept because of other existing logical entities (CS or BCSM) in this CSA which are not affected by this error/exception. This IF is not sent if the last CS was released.

The IF Entity Released is not used if the release of the entity can be reported through other IFs, e.g. Event Report BCSM, Call Information Report.

##### 4.6.1.5.2 Information Elements

Information element name	Status	Description
CS Failure	E	This IE indicates that an CS has been released.
BCSM Failure	E	This IE indicates that a leg has been released.

CS Failure contains the following information elements:

Information element name	Status	Description
Call Segment ID	M	This IE identifies the released CS.
Cause	C	This IE indicates the cause for releasing the CS. The Cause may be used by the gsmSCF to decide how to continue the call handling.

BCSM Failure contains the following information elements:

Information element name	Status	Description
Leg ID	M	This IE identifies the released leg.
Cause	C	This IE indicates the cause for releasing the leg. The cause may be used by the gsmSCF to decide handling.

#### 4.6.1.6 Event Notification Charging

##### 4.6.1.6.1 Description

This IF is used by the gsmSSF to report to the gsmSCF the charging information requested in the Request Notification Charging IF.

##### 4.6.1.6.2 Information elements

Information element name	MO	MF	MT	VT	NC	NP	Description
Event Specific Charging Information	M	M	M	M	M	M	This IE is described in a table below. This IE contains the charging information provided by the gsmSSF.
Leg ID	M	M	M	M	M	M	This IE indicates the leg for which event is being reported.

Event Specific Charging Information contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Info Charge Units Total	S,E	S,E	S,E	S,E	S,E	S,E	This IE is described in a table below. This IE shall be present if total charge units were requested. This contains the accumulated charge units.
Info Charge Units components	S,E	S,E	S,E	S,E	S,E	S,E	This IE is described in a table below. This IE shall be present if charge units were reported for the list of charging components. This IE contains the list of charging components and accumulated components which have been monitored.
Info e-values Total	S,E	S,E	S,E	S,E	S,E	S,E	This IE is described in a table below. This IE shall be present if the net applicable e-values were requested. This IE contains the applicable e-values.
Info e-values Components	S,E	S,E	S,E	S,E	S,E	S,E	This IE is described in a table below. This IE shall be present if e-values were requested for the list of charging components. This IE contains the list of charging components and applicable e-values for the monitored components.

Info Charge Units Total contains the following information:

Information element name	MO	MF	MT	VT	NC	NP	Description
Reporting Condition Units	M	M	M	M	M	M	This IE is described in a table below. This IE is received in related Request Notification Charging IF. This IE shall be a copy of the corresponding IE received in the Request Notification Charging IF.
Charge Units	M	M	M	M	M	M	This IE contains the accumulated charge units which have been monitored.

Info Charge Units Components contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Reporting Condition Units	M	M	M	M	M	M	This IE is described in a table below. This IE is received in the related Request Notification Charging IF. This IE shall be a copy of the corresponding IE received in the Request Notification Charging IF.
Charge Units	M	M	M	M	M	M	This IE contains the accumulated charge units which have been monitored.
Monitor Component	M	M	M	M	M	M	This IE is described in a table below. This IE contains the specific charging component which has been monitored.

Info e-values Total contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Reporting Condition Evaluated	M	M	M	M	M	M	This IE is described in a table below. This IE is received in the related Request Notification Charging IF. This IE shall be a copy of the corresponding IE received in the Request Notification Charging IF.
e-values And Tsw	M	M	M	M	M	M	This IE is described in a table below. This IE contains the e-values and the duration for which these e-values are applicable.

Info e-values Components contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Reporting Condition e-values	M	M	M	M	M	M	This IE is described in a table below. This IE is received in the related Request Notification Charging IF. This IE shall be a copy of the corresponding IE received in the Request Notification Charging IF.
e-values And Tsw	M	M	M	M	M	M	This IE is described in a table below. This contains the e-values and the duration for which these e-values are applicable.
Monitor Component	M	M	M	M	M	M	This IE is described in a table below. This IE contains the specific charging component which has been monitored.

Reporting Condition Units contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
End Of Connection	S,E	S,E	S,E	S,E	S,E	S,E	This IE shall be present if the charge units were requested when the leg clears.
Threshold Counter Value	S,E	S,E	S,E	S,E	S,E	S,E	This IE shall be present if the charge units were requested after exceeding or equalling the threshold.

Monitor Component contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Charges Specific PLMN	C	C	C	C	C	C	This IE indicates the PLMN specific charges at the serving MSC determined by the operator based on radio resource utilization, roaming etc.
Charges Transit Network	C	C	C	C	C	C	This IE indicates the specific charges at the serving MSC based on the charging information received from the transit network.

Reporting Condition e-values contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Occurrence Of Event	M	M	M	M	M	M	This IE indicates that the e-values are reported immediately after the occurrence of any charging event related to the indicated leg.

e-values And Tsw contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
CAI Elements	M	M	M	M	M	M	This IE contains CAI elements as described in 3GPP TS 22.024 [3]
Tariff Switch Interval	M	M	M	M	M	M	This IE contains the time duration for which reported e-values are applicable.

## 4.6.1.7 Event Report BCSM

### 4.6.1.7.1 Description

This IF is used to notify the gsmSCF of a call-related event (i.e., BCSM events as answer and disconnect) previously requested by the gsmSCF in a Request Report BCSM Event IF.

## 4.6.1.7.2 Information Elements

Information element name	MO	MF	MT	VT	NC	NP	Description
Event Type BCSM	M	M	M	M	M	M	This IE specifies the type of event that is reported.
Event Specific Information BCSM	C	C	C	C	C	C	This IE indicates the call related information specific to the event.
Leg ID	M	M	M	M	M	M	This IE indicates the party in the call for which the event is reported.
Misc Call Info	M	M	M	M	M	M	This IE indicates the DP type.

If the Event Type BCSM IE contains either O\_Answer or T\_Answer, then the Event Specific Information BCSM IE contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Destination Address	M	M	M	M	M	M	This IE specifies the destination address for the call leg. The <i>NatureOfAddress indicator</i> may contain a national-specific value. For some national-specific <i>NatureOfAddress indicator</i> values the length of the digit part of destination address may be zero.
OR	-	C	C	-	-	-	This IE indicates that the call was subject to basic Optimal Routing as specified in 3GPP TS 23.079 [18].
Forwarded Call	-	M	C	C	-	-	This IE indicates that the call has been subject to a Call Forwarding supplementary service.
Charge Indicator	S	S	S	S	S	S	This IE specifies the value which will be stored in the Call Data Record. See ITU-T Recommendation Q.763 [40].

If the Event Type BCSM IE contains either O\_Mid\_Call or T\_Mid\_Call, then the Event Specific Information BCSM IE contains the following information element:

Information element name	MO	MF	MT	VT	NC	NP	Description
Midcall Info	M	-	-	M	-	-	This IE is described in a table below.

MidCall Info contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
DTMF Digits Completed	S,E	-	-	S,E	-	-	This IE contains the detected mid-call digits. This IE shall be present when triggering takes place after the minimum number of digits has been detected.
DTMF Digits Timeout	S,E	-	-	S,E	-	-	This IE contains the detected mid-call digits. This IE shall be present when triggering takes place before the minimum number of digits has been detected.

If the Event Type BCSM IE contains one of Route\_Select\_Failure, O\_Called\_Party\_Busy, O\_Disconnect or T\_Disconnect, then the Event Specific Information BCSM IE contains the following information element:

Information element name	MO	MF	MT	VT	NC	NP	Description
Cause	C	C	C	C	C	C	This IE indicates the cause.

If the Event Type BCSM IE contains T\_Busy, then the Event Specific Information BCSM IE contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Cause	C	C	C	C	-	-	This IE indicates the cause.
Call forwarded	-	-	C	C	-	-	This IE indicates that the call may be forwarded by the appropriate Call Forwarding supplementary service or Call Deflection supplementary service. If T_Busy is reported from the GMSC, then this IE shall be present in the following cases: <ul style="list-style-type: none"> <li>- The event is triggered by the reception of an FTN in the 2<sup>nd</sup> Send Routing Info ack from the HLR;</li> <li>- The event is triggered by the reception of the Resume Call Handling information flow from the VMSC.</li> </ul> If T_Busy is reported from the VMSC, then this IE shall be present in the following cases: <ul style="list-style-type: none"> <li>- The event is triggered by the invocation of conditional call forwarding (Busy or Not_Reachable);</li> <li>- The event notification is triggered by the invocation of Call Deflection.</li> </ul>
Route Not permitted	-	-	S	-	-	-	This IE indicates that the further call setup will not take place in this GMSC due to the rules of basic optimal routing. See 3GPP TS 23.079 [18].
Forwarding Destination Number	-	-	C	C	-	-	This IE contains the Forwarded-to-Number or the Deflected-to-Number. It shall be present if the Call Forwarded IE is present. Otherwise, it shall be absent.

If the Event Type BCSM IE contains T\_No\_Answer, then the Event Specific Information BCSM IE contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Call Forwarded	-	-	C	C	-	-	This IE indicates that the call may be forwarded by the appropriate Call Forwarding supplementary service. If T_No_Answer is reported from the GMSC, then this IE shall be present in the following cases: <ul style="list-style-type: none"> <li>- The event is triggered by the reception of the Resume Call Handling information flow from the VMSC.</li> </ul> If the T_No_Answer is reported from the VMSC, then this IE shall be present in the following cases: <ul style="list-style-type: none"> <li>- The event is triggered by the invocation of conditional call forwarding (No_Answer).</li> </ul>
Forwarding Destination Number	-	-	C	C	-	-	This IE contains the Forwarded-to-Number or the Deflected-to-Number. It shall be present if the Call Forwarded IE is present. Otherwise, it shall be absent.

If the Event Type BCSM IE contains Call\_Accepted, then the Event Specific Information BCSM IE contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Location Information	-	-	-	C	-	-	See subclause 4.6.1.9.

If the Event Type BCSM IE contains O\_Term\_Seized, O\_Change\_Of\_Position or T\_Change\_Of\_Position, then the Event Specific Information BCSM IE contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Location Information	C	-	-	C	-	-	See subclause 4.6.1.9.

If the Event Type BCSM IE contains O\_Abandon, then the Event Specific Information BCSM IE contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Route Not Permitted	-	S	-	-	-	-	This IE indicates that the further call setup will not take place in this MSC due to the rules of basic optimal routing. See 3GPP TS 23.079 [18].

If the Event Type BCSM IE contains O\_No\_Answer, then the Event Specific Information BCSM IE is not included.

#### 4.6.1.8 Initiate Call Attempt ack

##### 4.6.1.8.1 Description

This IF is the successful response to the Initiate Call Attempt IF.

##### 4.6.1.8.2 Information Elements

Information element name	NC	NP	Description
Supported CAMEL Phases	M	M	This IE indicates the CAMEL Phases supported.
Supported CAMEL4 Subsets	M	M	This IE indicates the CAMEL phase 4 subsets supported.

#### 4.6.1.9 Initial DP

##### 4.6.1.9.1 Description

This IF is generated by the gsmSSF when a trigger is detected at a DP in the BCSM, to request instructions from the gsmSCF.

##### 4.6.1.9.2 Information Elements

(Note: IEs in the NC columns in this IF may need further study.)

Information element name	MO	MF	MT	VT	NC	NP	Description
Additional Calling Party Number	C	C	C	C	-	C	This IE contains the calling party number provided by the access signalling system of the calling user or received from the gsmSCF due to the previous CAMEL processing.
Bearer Capability	M	C	C	C	-	C	This IE indicates the type of the bearer capability connection to the user.
Called Party Number	C	M	M	M	-	M	This IE contains the number used to identify the called party in the forward direction. For MO and MF calls this IE is used in the case of TDP Route_Select_Failure (this is the destination number used to route the call) and in the case of TDP Busy and TDP No Reply (this is the MSISDN when the destination number used for the call is an MSRN, or in the case of unsuccessful call establishment received from the HLR via the MAP interface, otherwise it is the number used to route the call). For VT calls when there is no forwarding pending this is the MSISDN received in the Provide Roaming Number; if the MSISDN is not available, the basic MSISDN is used. For the MT and VT call case when there is call forwarding or call deflection pending, this is the MSISDN, i.e. not the forwarded-to or deflected-to number. If the Initial DP IF is sent at TDP Route_Select_Failure or TDP Analysed_Information then the <i>NatureOfAddress indicator</i> may contain a national-specific value. For some national-specific <i>NatureOfAddress indicator</i> values the length of the digit part of the destination address may be zero.
Called Party BCD Number	C	-	-	-	-	-	This IE contains the number used to identify the called party in the forward direction. It is used for an MO call in all cases except in the case of TDP Route_Select_Failure. For the TDP Collected_Information, the number contained in this IE shall be identical to the number received over the access network. It may e.g. include service selection information, such as * and # digits, or carrier selection information dialled by the subscriber. For the TDP Analysed_Information, the number contained in this IE shall be the dialled number received over the network access or received from a gsmSCF in a Connect IF, Service selection information, such as * and # digits may be present (see subclause 4.2.1.2.2); carrier selection information dialled by the subscriber is not present.
Calling Party Number	M	C	C	C	-	C	This IE carries the calling party number to identify the calling party or the origin of the call.
Calling Partys Category	M	C	C	C	-	C	This IE indicates the type of calling party (e.g., operator, pay phone, ordinary subscriber).
CallGap Encountered	C	C	C	C	-	C	This IE indicates the type of gapping which has been applied to the related call. This IE shall be present only if a call gapping context is applicable to the Initial DP IF.

Information element name	MO	MF	MT	VT	NC	NP	Description
Call Reference Number	M	M	M	M	-	M	This IE may be used by the gsmSCF for inclusion in a network optional gsmSCF call record. It has to be coupled with the identity of the MSC which allocated it in order to define unambiguously the identity of the call. For MO calls, the call reference number is set by the serving VMSC and included in the MO call record. For MT calls, the call reference number is set by the GMSC and included in the RCF call record in the GMSC and in the MT call record in the terminating MSC. For VT calls, the call reference number is set by the GMSC and included in the RCF call record in the GMSC and in the MT call record in the terminating MSC. For CF calls, the call reference number is set by the GMSC and included in the CF record in the forwarding MSC.
Cause	C	C	C	C	-	-	This IE indicates the cause specific to the armed BCSM DP event. This IE is applicable to DP Route_Select_Failure and DP T_Busy. The cause may be used by the gsmSCF to decide how to continue the call handling.
Event Type BCSM	M	M	M	M	-	M	This IE indicates the armed BCSM DP event, resulting in the Initial DP IF.
Ext-Basic Service Code	C	C	C	C	-	C	This IE indicates the type of basic service i.e., teleservice or bearer service.
High Layer Compatibility	C	C	C	C	-	C	This IE indicates the type of the high layer compatibility, which will be used to determine the ISDN-teleservice of a connected ISDN terminal.
IMSI	M	M	M	M	-	S	This IE identifies the mobile subscriber. For the NP case, the IMSI is mandatory if the new party is initiated in an MO, MF, MT, or VT call, otherwise it shall be absent.
IP SSP Capabilities	C	C	C	C	-	C	This IE indicates which SRF resources are supported within the gsmSSF and are available. If this IE is absent, it indicates that no gsmSRF is attached and available.
Location Information	M	-	C	M	-	-	This IE is described in a table below.
Location Number	M	C	C	C	-	-	For mobile originated calls this IE represents the location of the calling party. For all other call scenarios this IE contains the location number received in the incoming ISUP signalling.
MSC Address	M	M	M	M	-	M	For MO calls, the MSC Address carries the international E.164 address of the serving VMSC. For MT calls, the MSC Address carries the international E.164 address of the GMSC. For VT calls, the MSC Address carries the international E.164 address of the serving VMSC. For MF calls, the MSC Address carries the international E.164 address of the forwarding MSC. For the NP case, the MSC address carries the international E.164 address of the serving VMSC (the NP case in the GMSC will not cause an Initial DP IF).

Information element name	MO	MF	MT	VT	NC	NP	Description
GMSC Address	-	M	-	M	-	S	For CF calls, the GMSC Address carries the international E.164 address of the GMSC. For VT calls, the GMSC Address carries the international E.164 address of the GMSC. For NP case, the GMSC Address is mandatory if the new party is initiated in an MF call or in a VT call, otherwise it shall be absent. The GMSC Address carries the international E.164 address of the GMSC.
Carrier	S	S	S	S	-	S	This IE is described in a table below. This IE may be present when the VPLMN and the HPLMN of the subscriber are both North American. For MO calls, this IE shall identify any carrier that was explicitly selected by the calling subscriber. If no carrier was explicitly selected, this IE shall contain the calling subscriber's subscribed carrier. For MT and VT calls, the IE shall contain the carrier subscribed to by the called subscriber. For MF calls, the IE shall contain the carrier subscribed to by the forwarding subscriber.
Original Called Party ID	C	C	C	C	-	-	This IE carries the dialed digits if the call has met call forwarding on the route to the gsmSSF. This IE shall also be sent if it was received from the gsmSCF due to previous CAMEL processing.
Redirecting Party ID	C	C	C	C	-	-	This IE indicates the directory number the call was redirected from. This IE shall also be sent if it was received from the gsmSCF due to previous CAMEL processing.
Redirection Information	C	C	C	C	-	-	This IE contains forwarding related information, such as the redirection counter.
Service Key	M	M	M	M	-	M	This IE indicates to the gsmSCF the requested CAMEL Service. It is used to address the required application within the gsmSCF.
Subscriber State	-	-	C	C	-	-	This IE indicates the status of the MS. The states are: - CAMEL Busy: The MS is engaged on a transaction for a mobile originating or terminated circuit-switched call. - Network Determined Not Reachable: The network can determine from its internal data that the MS is not reachable. - Assumed Idle: The state of the MS is neither "CAMEL Busy" nor "Network Determined Not Reachable". - Not provided from VLR.
Time And Timezone	M	M	M	M	-	M	This IE contains the time that the gsmSSF was triggered, and the time zone in which gsmSSF resides.

Information element name	MO	MF	MT	VT	NC	NP	Description
Call Forwarding SS Pending	-	-	C	C	-	-	<p>If the Initial DP IF is sent from the GMSC, then this IE shall be present in the following cases:</p> <ul style="list-style-type: none"> <li>- The GMSC has received an FTN in the 1st Send Routing Info ack IF from the HLR.</li> <li>- The GMSC has received an FTN in the 2nd Send Routing Info ack IF from the HLR and no relationship with the gsmSCF exists at that moment.</li> <li>- The GMSC has received the Resume Call Handling IF from the VMSC and no relationship with the gsmSCF exists at that moment.</li> </ul> <p>If the Initial DP IF is sent from the VMSC, then this IE shall be present in the following cases:</p> <ul style="list-style-type: none"> <li>- Conditional call forwarding is invoked and no relationship with the gsmSCF exists at that moment.</li> <li>- Call Deflection is invoked and no relationship with the gsmSCF exists at that moment.</li> </ul>
Forwarding Destination Number	-	-	C	C	-	-	This IE contains the Forwarded-to-Number or the Deflected-to-Number. It shall be present if the Call Forwarding SS Pending IE is present, otherwise it shall be absent.
Service Interaction Indicators Two	C	C	C	C	-	C	The IE is described in a table below. This IE is present if it is received in the ISUP message or due to previous CAMEL processing.
CUG Index	C	-	-	-	-	C	See 3GPP TS 23.085 [21] for details of this IE.
CUG Interlock Code	C	C	C	C	-	C	This IE shall be set according to 3GPP TS 23.085 [21] unless modified by the gsmSCF via the Connect or Continue With Argument IFs.
Outgoing Access Indicator	C	C	C	C	-	C	This IE shall be set according to the 3GPP TS 23.085 [21] unless modified by the gsmSCF via the Connect or Continue With Argument IFs.
MS Classmark 2	C	-	-	-	-	-	This IE contains the MS classmark 2, which is sent by the MS when it requests access to setup the MO call or responds to paging in the CS domain.
IMEI (with software version)	C	-	-	-	-	-	This IE contains the IMEISV (as defined in 3GPP TS 23.003 [7]) of the ME in use by the served subscriber.
Supported CAMEL Phases	M	M	M	M	M	M	This IE indicates the CAMEL Phases supported by the GMSC or the VMSC.
Supported CAMEL4 Subsets	M	M	M	M	M	M	This IE indicates the CAMEL phase 4 subsets supported by the GMSC or the VMSC.

Location Information is defined in 3GPP TS 23.018 [12]. The following differences apply:

Information element name	MO	MF	MT	VT	NC	NP	Description
Location Number	-	-	C	C	-	-	See 3GPP TS 23.018 [12].
Service area ID	C,E	-	C,E	C,E	-	-	See 3GPP TS 23.018 [12].
Cell ID	C,E	-	C,E	C,E	-	-	See 3GPP TS 23.018 [12].
Geographical information	C	-	C	C	-	-	See 3GPP TS 23.018 [12].
Geodetic information	C	-	C	C	-	-	See 3GPP TS 23.018 [12].
VLR number	M	-	C	M	-	-	See 3GPP TS 23.018 [12].
Age Of location information	M	-	C	C	-	-	See 3GPP TS 23.018 [12].
Current Location Retrieved	-	-	-	-	-	-	Not applicable
Location area ID	C,E	-	C,E	C,E	-	-	See 3GPP TS 23.003 [7].
Selected LSA Identity	S	-	S	S	-	-	This IE indicates the LSA identity associated with the current position of the MS. It shall be present if the LSA ID in the subscriber data matches the LSA ID of the current cell. In the case of multiple matches the LSA ID with the highest priority shall be present. See 3GPP TS 23.073 [17]. This IE shall be present if available and SoLSA is supported, otherwise it shall be absent.

Carrier contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Carrier Identification Code	M	M	M	M	-	M	This IE uniquely identifies a North American long distance carrier.
Carrier Selection Information	M	M	M	M	-	M	This IE indicates the way the carrier was selected i.e.: - dialled - subscribed

Service Interaction Indicators Two contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Forward Service Interaction Indicator	C	C	C	C	-	C	This IE is described in a table below.
HOLD Treatment Indicator	C	-	-	C	-	C	This IE indicates whether the CAMEL subscriber can invoke HOLD for the call.
CW Treatment Indicator	C	-	-	C	-	C	This IE indicates whether CW can be applied for a call to the CAMEL subscriber whilst this call is ongoing.
ECT Treatment Indicator	C	-	-	C	-	C	This IE indicates whether the call leg can become part of an ECT call initiated by the CAMEL subscriber.

Forward Service Interaction Indicator contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Conference Treatment Indicator	C	C	C	C	-	C	This IE indicates whether the call leg can become part of a MPTY call initiated by the called subscriber.
Call Diversion Treatment Indicator	C	C	C	C	-	C	This IE indicates whether the call can be forwarded using the Call Forwarding or Call Deflection supplementary services.

#### 4.6.1.10 Move Leg ack

##### 4.6.1.10.1 Description

This IF is the successful response to the Move Leg IF.

#### 4.6.1.10.2 Information Elements

This IF contains no information elements.

#### 4.6.1.11 Split Leg ack

##### 4.6.1.11.1 Description

This IF is the successful response to the Split Leg IF.

##### 4.6.1.11.2 Information Elements

This IF contains no information elements.

### 4.6.2 gsmSCF to gsmSSF information flows

#### 4.6.2.1 Activity Test

##### 4.6.2.1.1 Description

This IF is used to check for the continued existence of a relationship between the gsmSCF and gsmSSF. If the relationship is still in existence, then the gsmSSF will respond. If no reply is received, then the gsmSCF will assume that the gsmSSF has failed in some way and will take appropriate action.

##### 4.6.2.1.2 Information Elements

This IF contains no information elements.

#### 4.6.2.2 Apply Charging

##### 4.6.2.2.1 Description

This IF is used to instruct the gsmSSF to apply charging mechanisms to control the call duration.

##### 4.6.2.2.2 Information Elements

Information element name	MO	MF	MT	VT	NC	NP	Description
ACh Billing Charging Characteristics	M	M	M	M	M	M	This IE specifies the charging related information to be provided by the gsmSSF and the conditions on which this information has to be provided back to the gsmSCF.
Party To Charge	M	M	M	M	M	M	This IE shall be reflected in the corresponding IE of the Apply Charging Report IF. This IE has no effect on the charging procedures in the MSC.
Leg ID	M	M	M	M	M	M	This IE identifies the call party concerned by the Apply Charging IF.

ACh Billing Charging Characteristics contains the following information element:

Information element name	MO	MF	MT	VT	NC	NP	Description
Time Duration Charging	M	M	M	M	M	M	This IE is described in a table below.

Time Duration Charging contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Max Call Period Duration	M	M	M	M	M	M	This IE indicates the maximum call period duration timer.
Tariff Switch Interval	O	O	O	O	O	O	This IE indicates the tariff switch time until the next tariff switch applies for this call leg.
Release If Duration Exceeded	O	O	O	O	O	O	This IE indicates that the call leg shall be released when the Max call Period Duration expires. The cause used in the Release IF shall be "normal unspecified". The default handling is to continue the call.
Audible Indicator	O	-	O	O	O	O	This IE is described in a table below.

Audible Indicator IE shall contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Play Tone	E	-	E	E	E	E	This IE indicates that a fixed sequence of tones shall be played to the party for whom the BCSM is operating. If present, this IE indicates that 30 seconds before the Max Call Period Duration timer expires, a fixed sequence of tones consisting of 3 tones of 900 Hz, with a 200 milliseconds tone duration and a 200 milliseconds intertone duration shall be played.
Play Burstlist	E	-	E	E	E	E	This IE is described in the table below. This IE indicates a variable sequence of bursts that shall be played during the call period to the party for whom the BCSM is operating.

Play Burstlist IE consists of the following information elements:

Information element name	Status	Description
Warning Period	M	This IE indicates the time, before the Max Call Period Duration timer expires, when the Play Burst List IE shall start.
Number Of Bursts	M	This IE indicates the number of bursts to be played. There may be up to three bursts.
Burst Interval	O	This IE indicates the time interval between successive bursts.
Number Of Tones In Burst	M	This IE indicates the number of tones to be played in each burst. There may be up to three tones per burst. The tone is fixed to 900 Hz.
Tone Duration	M	This IE indicates the duration of a tone in a burst.
Tone Interval	O	This IE indicates the time interval between successive tones in a burst.

Service logic designers should note that the total duration of the Burst List should not exceed the WarningPeriod IE, otherwise an incomplete Burst List will be played to the served party.

### 4.6.2.3 Call Gap

#### 4.6.2.3.1 Description

This IF is used to activate/modify/remove a call gap mechanism in the gsmSSF. The call gap mechanism is used to reduce the rate at which specific service requests are sent to a gsmSCF.

A Call Gap IF can only be sent on an opened dialogue between a gsmSCF and a gsmSSF.

It is possible to have several call gapping conditions applicable to the same gsmSSF (i.e. each conditions was activated for a defined Service (identified by the service Key) by a defined gsmSCF (identified by the gsmSCF address).

## 4.6.2.3.2 Information Elements

Information element name	Status	Description
Gap Criteria	M	This IE specifies the criteria for a call to be subject to call gapping.
Gap Indicators	M	This IE indicates the gapping characteristics.
Control Type	O	This IE indicates the reason for activating call gapping. The value "gsmSCF Overloaded" indicates that an automatic congestion detection and control mechanism in the gsmSCF has detected a congestion situation. The value "Manually Initiated" indicates that the service and/or network/service management centre has detected a congestion situation, or any other situation that requires manually initiated controls. The Control Type "Manually Initiated" will have priority over a "gsmSCF Overloaded" call gap. Note that Non-IN controlled traffic control mechanism can also apply to an exchange with the gsmSSF functionality. As the non-IN controlled traffic control is within the MSC, this traffic control has implicit priority over the IN controlled traffic control. The non-IN controlled traffic control may also have some influence on the IN call. Therefore it is recommended to take measures to coordinate several traffic control mechanisms. The non-IN controlled traffic control and co-ordination of several traffic control mechanisms are out of the scope of the present document.
Gap Treatment	O	This IE indicates how calls that were rejected due to the call gapping condition and have Default Call Handling as "Release Call" shall be treated.

Gap Criteria contains one of the following information elements:

Information element name	Status	Description
Basic Gap Criteria	O,E	This IE is a choice of various basic criteria.
Compound Gap Criteria	O,E	This IE is a choice of various criteria including a gsmSCF ID.

Compound Gap Criteria contains the following information elements:

Information element name	Status	Description
Basic Gap Criteria	M	This IE is a choice of various criteria.
gsmSCF ID	O	This IE contains the address of the gsmSCF which initiated the Call Gapping.

Basic Gap Criteria contains one of the following information elements:

Information element name	Status	Description
Called Address	O,E	This IE contains a string of digits. For each call attempt where the leading digits of the dialled number match this specific value, the call gapping treatment shall be applied to the call.
Service	O,E	This IE contains a service key value. For each call attempt where the service key match this specific value, the call gapping treatment shall be applied to the call.
Called Address And Service	O,E	This IE contains a specific string of digits and a service key value. For each call attempt where the leading digits of the dialled number and the service key of a call match these specific values, the call gapping treatment shall be applied to the call.
Calling Address And Service	O,E	This IE contains a specific string of digits and a service key value. For each call attempt where the leading digits of the calling party number and the service key match these specific values, the call gapping treatment shall be applied to the call.

Gap Indicators contains the following information elements:

Information element name	Status	Description
Duration	M	This IE specifies the total time interval during which call gapping for the specified gap criteria will be active. A duration of 0 indicates that gapping is to be removed. A duration of -2 indicates a network specific duration. Other values indicate the duration in seconds.
Interval	M	This IE specifies the minimum time between calls being allowed through. An interval of 0 indicates that calls meeting the gap criteria are not to be rejected. An interval of -1 indicates that all calls meeting the gap criteria are to be rejected. Other values indicate the interval in milliseconds.

Gap Treatment contains one of the following elements:

Information element name	Status	Description
Information To Send	O,E	This IE indicates an announcement or a tone to be sent to the calling party. At the tone or announcement, the call shall be released.
Release Cause	O,E	If the call is to be released, this IE indicates the specific cause value to be sent in the Release IF. See ETSI EN 300 356-1 [37] for the coding.

Information To Send contains one of the following elements:

Information element name	Status	Description
In-band Info	O,E	This IE specifies the in-band information to be sent.
Tone	O,E	This IE specifies a tone to be sent to the end-user.

In-band Info contains the following information elements:

Information element name	Status	Description
Message ID	M	This IE is described in a table below. This IE indicates the message(s) to be sent.
Message Duration	O	This parameter indicates the maximum time in seconds that the message shall be played/repeated. ZERO indicates endless repetition.

Message Id contains the following element:

Information element name	Status	Description
Elementary Message ID	O	This IE indicates a single announcement.

## 4.6.2.4 Call Information Request

### 4.6.2.4.1 Description

This IF is used to request the gsmSSF to record specific information about a single call and report it to the gsmSCF (with a Call Information Report IF).

### 4.6.2.4.2 Information Elements

Information element name	Status	Description
Requested Information Type List	M	This IE is described in a table below. This IE specifies a list of specific items of information which are requested.
Leg ID	M	This IE indicates the party in the call for which the information shall be collected.

Requested Information Type List contains the following information elements:

Information element name	Status	Description
Call Attempt Elapsed Time	O	This IE indicates that the Call Attempt Elapsed Time is requested in the Call Information Report. Call Attempt Elapsed Time is the duration between the end of the CAMEL processing initiating call setup (Connect, Continue or Continue With Argument IF) and the received answer indication from the called party side. For the Calling Party, the value of Call Attempt Elapsed Time in the Call Information Report shall be set to 0.
Call Stop Time	O	This IE indicates that the Call Stop Time is requested in the Call Information Report. Call Stop Time is the time stamp when the connection is released.
Call Connected Elapsed Time	O	This IE indicates that the Call Connected Elapsed Time is requested in the Call Information Report. Call Connected Elapsed Time is the duration between the received answer indication from the called party side and the release of the connection. For a Calling Party, it indicates the duration between the sending of the Initial DP IF and the release of that party.
Release Cause	O	This IE indicates that the Release Cause for the call is requested in the Call Information Report.

#### 4.6.2.5 Cancel

##### 4.6.2.5.1 Description

This IF is used by the gsmSCF to request the gsmSSF to cancel all EDPs and reports.

##### 4.6.2.5.2 Information Elements

Information element name	Status	Description
All Requests	M	This IE indicates that all active requests for the Event Report BCSM, Apply Charging Report and Call Information Report IFs shall be cancelled.

#### 4.6.2.6 Connect

##### 4.6.2.6.1 Description

This IF is used to request the gsmSSF to perform the call processing actions to route a call to a specific destination. To do so, the gsmSSF may use destination information from the calling party and existing call set-up information depending on the information provided by the gsmSCF.

## 4.6.2.6.2 Information Elements

Information element name	MO	MF	MT	VT	NC	NP	Description
Alerting Pattern	-	-	O	O	-	-	This IE indicates the kind of Alerting Pattern to be applied.
Calling Partys Category	O	O	O	O	O	O	This IE indicates the type of calling party (e.g., operator, pay phone, ordinary subscriber).
Destination Routing Address	M	M	M	M	M	M	This IE contains the called party number towards which the call is to be routed. The NatureOfAddress indicator may contain a national-specific value. For some national-specific <i>NatureOfAddress indicator</i> values the length of the digit part of the destination address may be zero. The gsmSCF may use national-specific <i>NatureOfAddress indicator</i> values of the gsmSSF country.
Generic Number	O	O	O	O	O	O	This IE contains the generic number. Its used to convey the additional calling party number, which e.g. could be used to modify the calling line ID presented to the called user.
Carrier	O	O	O	O	O	O	This IE is described in a table below.
NA Originating Line Information	O	O	O	O	O	O	This IE identifies the type of number in the Charge Number (e.g. subscriber versus PLMN operator number).
Charge Number	O	O	O	O	O	O	This IE identifies the chargeable number for the usage of a North American carrier.
O-CSI Applicable	-	-	O	O	-	-	This IE indicates that the O-CSI, if present shall be applied on the outgoing leg.
Original Called Party ID	O	O	O	O	O	O	This IE carries the dialled digits if the call has met call forwarding on route to the gsmSSF or is forwarded by the gsmSCF.
Leg To Be Connected	O	O	O	O	O	O	This IE indicates the existing leg to which the Connect IF applies.
Redirecting Party ID	O	O	O	O	O	O	This IE indicates the directory number the call was redirected from.
Redirection Information	O	O	O	O	O	O	This IE contains forwarding related information, such as redirecting counter.
Suppression Of Announcements	-	-	O	O	O	O	This IE indicates that announcements or tones generated as a result of unsuccessful call establishment shall be suppressed.
Service Interaction Indicators Two	O	O	O	O	O	O	This IE is described in a table below.
CUG Interlock Code	O	O	O	O	O	O	See 3GPP TS 23.085 [21] for details of this IE.
Outgoing Access Indicator	O	O	O	O	O	O	See 3GPP TS 23.085 [21] for details of this IE.
Basic OR interrogation requested	O	O	-	-	O	O	This IE indicates that a Basic Optimal Routeing interrogation is requested for the call. If Basic Optimal Routeing is successful, this will be reported to the gsmSCF in the Answer event report. This IE shall be ignored if the VMSC associated with the gsmSSF does not support Basic Optimal Routeing. This IE shall be ignored if it is received in a gsmSSF which is handling the MF call case in the GMSC function of the forwarding subscriber.

Carrier contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Carrier Identification Code	M	M	M	M	M	M	This IE uniquely identifies a North American long distance carrier.
Carrier Selection Information	M	M	M	M	M	M	This IE indicates the way the carrier was selected e.g.: - dialled; - subscribed.

Service Interaction Indicators Two contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Forward Service Interaction Indicator	O	O	O	O	O	O	This IE is described in a table below.
Backward Service Interaction Indicator	O	O	O	O	-	-	This IE is described in a table below.
HOLD Treatment Indicator	O	-	-	O	-	-	This IE allows the gsmSCF to disallow the invocation of HOLD by the CAMEL subscriber.
CW Treatment Indicator	O	-	-	O	-	-	This IE allows the gsmSCF to disallow the invocation of CW for a call to the CAMEL subscriber whilst this call is ongoing.
ECT Treatment Indicator	O	-	-	O	-	-	This IE allows the gsmSCF to disallow the call leg to become part of an ECT call initiated by the CAMEL subscriber.
Connected number treatment indicator	O	O	O	O	-	-	This IE indicates the treatment of the connected number at the originating side.
Non-CUG Call	O	O	O	O	O	O	This IE indicates that no parameters for CUG should be used for the call (i.e. the call should be a non-CUG call). Shall be absent if one or more of CUG Interlock Code and Outgoing Access Indicator is present in the IF.

Forward Service Interaction Indicator contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Conference Treatment Indicator	O	O	O	O	O	-	This IE allows the gsmSCF to disallow the call leg to become part of a MPTY call initiated by the CAMEL subscriber.
Call Diversion Treatment Indicator	O	O	O	O	O	-	This IE allows the gsmSCF to disallow the Call Forwarding or Call Deflection supplementary services for this call.
Calling Party Restriction Indicator	O	-	-	-	O	-	This IE allows the gsmSCF to mark the CLI as Restricted for the call. NP only applicable within an MO or NC case.

Backward Service Interaction Indicator contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Conference Treatment Indicator	O	O	O	O	-	O	This IE allows the gsmSCF to disallow the call leg to become part of a MPTY call initiated by the calling subscriber.
Call Completion Treatment Indicator	O	O	O	O	-	O	This IE allows the gsmSCF to disallow a CCBS request to be made for the call. See also 3GPP TS 23.093 [25] for description.

#### 4.6.2.7 Connect To Resource

##### 4.6.2.7.1 Description

This IF is used to connect a call from the gsmSSF to a gsmSRF.

## 4.6.2.7.2 Information Elements

Information element name	Status	Description
Service Interaction Indicators Two	O	This IE indicates whether or not a bothway through connection is required between the call segment and the gsmSRF. The handling when this IE is not present is defined in ETSI EN 301 070-1 ([38]).
IP Routeing Address	O	This IE indicates the routeing address to set up a connection towards the gsmSRF. If this IE is not present the call segment is connected to a predefined gsmSRF.
Call Segment ID	M	This IE indicates the call segment to be connected to the resource. The subsequent user interaction shall apply to all parties connected to the call segment.

## 4.6.2.8 Continue

## 4.6.2.8.1 Description

This IF requests the gsmSSF to proceed with call processing at the DP at which it previously suspended call processing to await gsmSCF instructions. The gsmSSF completes DP processing, and continues basic call processing (i.e., proceeds to the next point in call in the BCSM) without substituting new data from the gsmSCF.

## 4.6.2.8.2 Information Elements

This IF contains no information elements.

## 4.6.2.9 Continue With Argument

## 4.6.2.9.1 Description

This IF requests the gsmSSF to continue the call processing with modified information at the DP at which it previously suspended call processing to await gsmSCF instructions or to continue call processing after a Call Party Handling IF was received. The gsmSSF completes DP processing if necessary, and continues basic call processing (i.e., proceeds to the next point in call in the BCSM) with the modified call setup information as received from the gsmSCF.

The gsmSCF can send modified call information at DP Collected\_Info and at DP Analysed\_Info, as listed in the MO and MF columns in subclause 4.6.2.9.2.

The gsmSCF can send modified call information at DP Termination\_Attempt\_Authorised, as listed in the MT and VT columns in subclause 4.6.2.9.2.

The gsmSCF can send modified call information immediately after sending an Initiate Call Attempt IF, as listed in the NC and NP columns in subclause 4.6.2.9.2.

In all other cases, Continue With Argument shall contain only either the Leg ID or Call Segment ID IE.

## 4.6.2.9.2 Information Elements

Information element name	MO	MF	MT	VT	NC	NP	Description
Alerting Pattern	-	-	O	O	O	-	This IE indicates the kind of Alerting Pattern to be applied.
Calling Partys Category	O	O	O	O	O	O	This IE indicates the type of calling party (e.g., operator, pay phone, ordinary subscriber).
Generic Number	O	O	O	O	O	O	This IE contains the generic number. It is used to convey the additional calling party number, which e.g. could be used to modify the calling line ID presented to the called user.
Carrier	O	O	O	O	O	O	This IE is described in a table below.
NA Originating Line Information	O	O	O	O	O	O	This IE identifies the type of number in the Charge Number (e.g. subscriber versus PLMN operator number).
Charge Number	O	O	O	O	O	O	This IE identifies the chargeable number for the usage of a North American carrier.
Suppression Of Announcements	-	-	O	O	O	O	This IE indicates that announcements or tones generated as a result of unsuccessful call establishment shall be suppressed.
Service Interaction Indicators Two	O	O	O	O	O	O	This IE is described in a table below.
CUG Interlock Code	O	O	-	-	O	O	See 3GPP TS 23.085 [21] for details of this IE.
Outgoing Access Indicator	O	O	-	-	O	O	See 3GPP TS 23.085 [21] for details of this IE.
Basic OR Interrogation Requested	O	O	-	-	O	O,S	This IE indicates that a Basic Optimal Routeing interrogation is requested for the call. If Basic Optimal Routeing is successful, this will be reported to the gsmSCF in the Answer event report. This IE shall be ignored if the VMSC associated with the gsmSSF does not support Basic Optimal Routeing. This IE shall be ignored if it is received in a gsmSSF which is handling the MF call case in the GMSC function of the forwarding subscriber. For an NP call leg, this IE can only be included if the original call was an MO or NC call.
Leg ID	O,E	O,E	O,E	O,E	O,E	O,E	This IE indicates the party for which call processing is to be resumed.
Call Segment ID	O,E	O,E	O,E	O,E	O,E	O,E	This IE indicates the call segment for which call processing is to be resumed.
Suppress O-CSI	-	-	O	O	-	-	This IE indicates that O-CSI shall be suppressed for the forwarding leg or deflecting leg.
Suppress D-CSI	-	-	-	-	-	O	This IE indicates that D-CSI shall be suppressed for the new call leg. This IE can only be included if this IE is sent to the VMSC of the CAMEL subscriber.
Suppress N-CSI	-	-	-	-	-	O	This IE indicates that N-CSI shall be suppressed for the new call leg. This IE can only be included if this IE is sent to the VMSC of the CAMEL subscriber.
Suppress Outgoing Call Barring	-	-	-	-	-	O	This IE indicates that Outgoing Call Barrings for the created leg shall be suppressed. This IE can only be included if the Initiate Call Attempt IF is sent to the VMSC of the CAMEL subscriber.

Carrier contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Carrier Identification Code	M	M	M	M	M	M	This IE uniquely identifies a North American long distance carrier.
Carrier Selection Information	M	M	M	M	M	M	This IE indicates the way the carrier was selected i.e.: - dialled - subscribed

Service Interaction Indicators Two contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Forward Service Interaction Indicator	O	O	O	O	O	O	This IE is described in a table below.
Backward Service Interaction Indicator	O	O	O	O	-	-	This IE is described in a table below.
HOLD Treatment Indicator	O	-	-	O	-	-	This IE allows the gsmSCF to disallow the invocation of HOLD by the CAMEL subscriber.
CW Treatment Indicator	O	-	-	O	-	-	This IE allows the gsmSCF to disallow the invocation of CW for a call to the CAMEL subscriber whilst this call is ongoing.
ECT Treatment Indicator	O	-	-	O	-	-	This IE allows the gsmSCF to disallow the call leg to become part of an ECT call initiated by the CAMEL subscriber.
Connected Number Treatment Indicator	O	O	O	O	-	-	This IE indicates the treatment of the connected number at the originating side.
Non-CUG Call	O	O	-	-	-	O	This IE indicates that no parameters for CUG should be used for the call (i.e. the call should be a non-CUG call). This IE shall be absent if one or more of CUG Interlock Code and Outgoing Access Indicator are present in the IF.

Forward Service Interaction Indicator contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Conference Treatment Indicator	O	O	O	O	O	O	This IE indicates whether the call leg can become part of a MPTY call initiated by the called subscriber.
Call Diversion Treatment Indicator	O	O	O	O	O	O	This IE indicates whether the call can be forwarded using the Call Forwarding or Call Deflection supplementary services.
Calling Party Restriction Indicator	O	-	-	-	-	O	This IE indicates whether the CLI shall be marked as Restricted by CAMEL action for the call. For an NP case, this IE can only be included if the original call was an MO call.

Backward Service Interaction Indicator contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Conference Treatment Indicator	O	O	O	O	-	-	This IE indicates if the call leg can become part of a MPTY call initiated by the calling subscriber.
Call Completion Treatment Indicator	O	O	O	O	-	-	This IE indicates whether a CCBS request can be made for the call. See also 3GPP TS 23.093 [25] for description.

## 4.6.2.10 Disconnect Forward Connection

### 4.6.2.10.1 Description

This IF is used:

- to disconnect a connection with a gsmSRF previously established with a Connect To Resource IF;
- to disconnect an initiating gsmSSF from an assisting gsmSSF and its associated gsmSRF. The IF is sent to the initiating gsmSSF.

### 4.6.2.10.2 Information Elements

This IF contains no information elements.

## 4.6.2.11 Disconnect Forward Connection With Argument

### 4.6.2.11.1 Description

This IF is used in the following two cases:

- 1) To clear a connection to a gsmSRF: This IF is used to explicitly disconnect a connection to a resource (gsmSRF) established previously with a Connect To Resource or an Establish Temporary Connection IF. It is used for a forward disconnection from the gsmSSF.
- 2) To clear a connection to an assisting SSF: This IF is sent to the non-assisting SSF of a pair of SSFs involved in an assist procedure. It is used to disconnect the temporary connection between the initiating SSF and the assisting SSF.

### 4.6.2.11.2 Information Elements

Information element name	Status	Description
Call Segment ID	M	This IE indicates the call segment in the call to be disconnected from the resource or the temporary connection.

## 4.6.2.12 Disconnect Leg

### 4.6.2.12.1 Description

This IF is used to request the gsmSSF to release a specific leg associated with the call at any phase. All other legs in this call are retained. If the last leg of the call segment is disconnected, then the call segment is deleted.

### 4.6.2.12.2 Information Elements

Information element name	Status	Description
Leg To Be Released	M	This IE indicates the party in the call to be released.
Release Cause	O	This IE indicates to the gsmSSF the reason for releasing the identified party. This may be used by the MSC or GMSC for generating specific tones to the party to be released or to fill in the "cause" IE in the Release IF.

## 4.6.2.13 Establish Temporary Connection

### 4.6.2.13.1 Description

This IF is used to create a connection between an initiating gsmSSF and an assisting gsmSSF as a part of the assist procedure. It can also be used to create a connection between a gsmSSF and a gsmSRF.

## 4.6.2.13.2 Information Elements

Information element name	Status	Description
Assisting SSP IP Routing Address	M	This IE indicates the destination address of the gsmSRF or assisting gsmSSF for the assist procedure. As a network operator option, the Assisting gsmSSF IP Routing Address may contain embedded within it, a "Correlation ID" and "gsmSCF ID", but only if "Correlation ID" and "gsmSCF ID" are not specified separately.
Correlation ID	O	This IE is used for: <ul style="list-style-type: none"> <li>- the correlation of dialogues from the initiating gsmSSF-&gt; gsmSCF with dialogues from gsmSRF -&gt; gsmSCF;</li> <li>- the correlation of dialogues from the initiating gsmSSF-&gt; gsmSCF with dialogues from assisting gsmSSF -&gt; gsmSCF.</li> </ul>
Carrier	O	This IE is described in a table below.
NA Originating Line Information	O	This IE identifies the type of number in the Charge Number (e.g. subscriber versus PLMN operator number).
Charge Number	O	This IE identifies the chargeable number for the usage of a North American carrier.
gsmSCF ID	O	This IE indicates the gsmSCF identifier.
Service Interaction Indicators Two	O	This IE indicates whether or not a bothway through connection is required between the call segment and the gsmSRF. The handling when this IE is not present is defined in ETSI EN 301 070-1 [38].
Call Segment ID	M	This IE indicates the call segment to be connected to the resource. The subsequent user interaction shall apply to all parties connected to the call segment.

Carrier contains the following information elements:

Information element name	Status	Description
Carrier Identification Code	M	This IE uniquely identifies a North American long distance carrier.
Carrier Selection Information	M	This IE indicates the way the carrier was selected i.e.: <ul style="list-style-type: none"> <li>- dialled;</li> <li>- subscribed.</li> </ul>

## 4.6.2.14 Furnish Charging Information

## 4.6.2.14.1 Description

This IF is used to request the gsmSSF to include call related information in the CAMEL specific logical call record. The logical call record is created when the Furnish Charging Information IF is received and a logical call record for that leg does not exist. For modelling purposes the logical call record is buffered in the gsmSSF. The gsmSSF completes logical call records as defined in the SDLs. Once the logical call record is completed, then the free format data are moved to the corresponding CDR and the logical call record is deleted.

The gsmSCF can send multiple concatenated Furnish Charging Information IFs per leg for completion. The total maximum of free format data is 160 octets per leg. The 160 octets may be sent in one or more FCI IFs. If there are incomplete free format data and new Furnish Charging Information IF(s) is/are received to overwrite the non-completed data, then the non-complete data are discarded and the gsmSCF can send another 160 octets per leg. The SDLs of the present document define when logical call records are completed. After the completion the gsmSCF can send another 160 octets of the free format data in one or more Furnish Charging Information IFs for the called leg.

## 4.6.2.14.2 Information Elements

Information element name	Status	Description
FCI Billing Charging Characteristics	M	This IE is described in a table below.

FCI Billing Charging Characteristics contains the following information element:

Information element name	Status	Description
FCIBCCCAMEL Sequence 1	M	This IE is described in a table below.

FCIBCCCAMEL Sequence 1 contains the following information elements:

Information element name	Status	Description
Free Format Data	M	This IE contains the free format data to be inserted in the CAMEL logical call record.
Party To Charge	M	This IE indicates the party for whom a CAMEL logical call record will be created.
Append Free Format Data	O	This IE indicates that the gsmSSF shall append the free format data to the logical call record. - If this IE is present and indicates "Append", the gsmSSF shall append the free format data received in this IF to the free format data already present in the logical call record for that leg of the call. - If this IE is absent or indicates "Overwrite", then the gsmSSF shall overwrite all free format data already present in the logical call record for that leg of the call, by the free format data received in this IF. If no logical call record exists for that leg of the call, then the gsmSSF shall ignore this IE.

#### 4.6.2.15 Initiate Call Attempt

##### 4.6.2.15.1 Description

This IF is used to request the gsmSSF to create a new party in an existing call (NP), or to create a completely new call (NC). The created leg is an originating call. The address information provided by the gsmSCF is used.

##### 4.6.2.15.2 Information Elements

Information element name	NC	NP	Description
Destination Routeing Address	M	M	This IE contains the called party number towards which the call is to be routed. For calls to an MS this can be the MSISDN (for routeing via a GMSC) or the MSRN received from the HLR (for routeing direct to the VMSC).
Calling Party Number	M	-	This IE identifies which number shall be regarded as the calling party for the created call.
Leg To Be Created	M	M	This IE indicates the legID to be assigned to the newly created party. The leg ID shall not be 1.
New Call Segment	M	M	This IE indicates the CS ID to be assigned to the newly created call segment.
Call Reference Number	M	-	This IE may be used by the gsmSCF for inclusion in a network optional gsmSCF call record. The call reference number is included by the MSC in the call record.
gsmSCF Address	M	-	This IE contains the address of the gsmSCF which initiated the new call. This IE is required for a unique Call Reference.
Suppress T-CSI	O	-	This IE indicates that T-CSI shall be suppressed on the terminating leg.

#### 4.6.2.16 Move Leg

##### 4.6.2.16.1 Description

This IF requests the gsmSSF to move a leg to the initial call segment. After the move the source call segment is deleted.

In moving the specified leg, the conditions of the leg: the armed EDPs, the Apply Charging Report pending, the Stored e-parameters, the Non-completed CAMEL logical call records, and the Call Information Report pending, are also applied for the same leg after the move.

## 4.6.2.16.2 Information Elements

Information element name	Status	Description
Leg ID To Move	M	This IE indicates the leg that shall be moved.

## 4.6.2.17 Play Tone

## 4.6.2.17.1 Description

This IF is used to play a variable sequence of tones to a particular leg or call segment using the MSC's tone generator. Refer to subclause 4.5.7.1.2 for a graphical representation of the variable sequence of tones.

In order to avoid tone bursts being played in close succession to the same party or group of parties, the gsmSCF is responsible for careful use of this IF especially when warning tones have been scheduled using the Apply Charging IF.

## 4.6.4.17.2 Information Elements

Information element name	Status	Description
Leg or Call Segment	M	This IE is described in a table below. This IE indicates the leg or call segment.
Burst List	M	This IE is described in a table below. This IE indicates a variable sequence of bursts.

Leg or Call Segment contains the following information elements:

Information element name	Status	Description
Call Segment ID	E	This IE indicates the call segment to which tones shall be played.
Leg ID	E	This IE indicates the leg to which tones shall be played.

Burst List contains the following information elements:

Information element name	Status	Description
Number of bursts	M	This IE indicates the number of bursts to be played. There may be up to three bursts.
Burst interval	O	This IE indicates the time interval between successive bursts.
Number of tones in burst	M	This IE indicates the number of tones to be played in each burst. There may be up to three tones per burst. The tone is fixed to 900 Hz.
Tone Duration	M	This IE indicates the duration of each tone in a burst.
Tone Interval	O	This IE indicates the time interval between successive tones in a burst.

## 4.6.2.18 Release Call

## 4.6.2.18.1 Description

This IF is used by the gsmSCF to tear down an existing call at any phase of the call for all parties involved in the call.

## 4.6.2.18.2 Information Elements

Information element name	Status	Description
Release Cause	M	This IE indicates the Release Cause for the call. This may be used by the MSC or GMSC for generating specific tones to the different parties in the call or to fill in the "cause" in the Release IF.

## 4.6.2.19 Request Notification Charging

### 4.6.2.19.1 Description

This IF is used to request the gsmSSF to monitor and report the e-values or charge units generated by MSC or transit network.

The gsmSCF is allowed to send this information flow only if the CAMEL phase 4 subset Charging Notification is supported by the gsmSSF.

### 4.6.2.19.2 Information elements

Information element name	MO	MF	MT	VT	NC	NP	Description
Event type Charging	M	M	M	M	M	M	This IE is described in a table below. This IE indicates the charging event type that has to be monitored.
Monitor mode	M	M	M	M	M	M	This IE indicates the monitor mode applicable for the corresponding "eventTypeCharging". Monitor mode can be NotifyandContinue and Transparent only.
Legid	M	M	M	M	M	M	This IE indicates the leg for which the charging event has to be monitored.

Event type Charging contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Charge Units Total	S,E	S,E	S,E	S,E	S,E	S,E	This IE is described in a table below. This IE shall be present if the accumulated charge units are to be monitored.
Charge Units Components	S,E	S,E	S,E	S,E	S,E	S,E	This IE is described in a table below. This IE shall be present if the charge units are to be monitored for list of charging components.
e-values Total	S,E	S,E	S,E	S,E	S,E	S,E	This IE is described in a table below. This IE shall be present if the net applicable e-values are to be monitored.
e-values Components	S,E	S,E	S,E	S,E	S,E	S,E	This IE is described in a table below. This IE shall be present if e-values are to be monitored for list of charging components.

Charge Units Total contains the following information element:

Information element name	MO	MF	MT	VT	NC	NP	Description
Reporting Condition Units	M	M	M	M	M	M	This IE is described in a table below. This IE indicates the reporting condition which must be satisfied for the indicated leg before reporting charge units.

Charge Units Components contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Monitor Component	M	M	M	M	M	M	This IE is described in a table below. This IE indicates the specific charging component to be monitored.
Reporting Condition Units	M	M	M	M	M	M	This IE indicates the reporting condition which must be satisfied for the indicated leg before reporting charge units.

e-values Total contains the following information element:

Information element name	MO	MF	MT	VT	NC	NP	Description
Reporting Condition e-values	M	M	M	M	M	M	This IE is described in a table below. This IE indicates the reporting condition which must be satisfied for the indicated leg before reporting e-values.

e-values Components contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Monitor Component	M	M	M	M	M	M	This IE indicates the specific charging component to be monitored.
Reporting Condition Evaluate	M	M	M	M	M	M	This IE indicates the reporting condition which must be satisfied for the indicated leg before reporting e-values.

Reporting Condition Units contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
End Of Connection	S,E	S,E	S,E	S,E	S,E	S,E	This IE shall be present if the charge units are to be reported when the leg clears.
Threshold Counter Value	S,E	S,E	S,E	S,E	S,E	S,E	This IE indicates the threshold value. This IE shall be present if the charge units are to be reported when threshold is reached or exceeded.

Monitor Component contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Charges Specific PLMN	C	C	C	C	C	C	This IE indicates that the PLMN specific charges at the serving MSC determined by operator based on radio resource utilization, roaming etc are to be monitored.
Charges Transit Network	C	C	C	C	C	C	This IE indicates that the specific charges at the serving MSC based on the charging information received from the transit network are to be monitored.

Reporting Condition e-values contains the following information element:

Information element name	MO	MF	MT	VT	NC	NP	Description
Occurrence Of Event	M	M	M	M	M	M	This IE indicates that the e-values are to be reported immediately after occurrence of any charging event related to the indicated leg.

#### 4.6.2.20 Request Report BCSM Event

##### 4.6.2.20.1 Description

This IF is used to request the gsmSSF to monitor for a call-related event, then send a notification back to the gsmSCF when the event is detected (see Event Report BCSM).

##### 4.6.2.20.2 Information Elements

Information element name	MO	MF	MT	VT	NC	NP	Description
BCSM Event	M	M	M	M	M	M	This IE specifies the event or events for which a report is requested.

BCSM Event contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Event type	M	M	M	M	M	M	This IE specifies the type of event for which a report is requested.
Leg ID	C	C	C	C	C	M	This IE indicates the party in the call for which the event shall be reported.
Monitor Mode	M	M	M	M	M	M	If this IE is "interrupted" then the event shall be reported as a request, if this IE is "notify and continue" then the event shall be reported as a notification, if this IE is "transparent" then the event shall not be reported.
DP Specific Criteria	O	O	O	O	O	O	This IE is described in a table below.
Automatic Rearm	O	-	-	O	-	-	This IE indicates that the detection point shall be automatically rearmed by the gsmSSF when it is encountered. This IE may be present only if the Event Type is O_Mid_Call, T_Mid_Call, O_Change_Of_Position or T_Change_Of_Position and the Monitor Mode is "notify and continue".

DP Specific Criteria contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Application Timer	O	O	O	O	O	O	This IE carries additional timer duration information (timer values for No_Answer event) required for arming the No_Answer EDPs in the gsmSSF. The TNRY timer (value defined between 10 seconds and 40 seconds) shall be shorter than the network no answer timer.
Mid Call Control Info	O	-	-	O	-	-	This IE is described in a table below. This IE carries the criterion for the detection and reporting of the mid-call event. If this IE is absent, then mid-call triggering shall take place when the first digit has been entered by the user.
NOTE	If a Request Report BCSM Event information flow overwrites previous Request Report BCSM Event information flow which contained Application Timer IE for No_Answer DP, the behaviour of the gsmSSF is unpredictable.						

Mid Call Control Info contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
Minimum Number Of Digits	M	-	-	M	-	-	This IE indicates the minimum number of digits to be collected. The value of this IE includes the length of the Start digit string, if present, and the length of the End of reply digit string, if present.
Maximum Number Of Digits	M	-	-	M	-	-	This IE indicates the maximum number of digits to be collected. The value of this IE includes the length of the Start digit string, if present, and the length of the End of reply digit string, if present. If triggering takes place due to the detection of the maximum number of digits and the End of reply digit string, if present, is partially detected, then the partially detected End of reply digit string shall be included in the digit string to be reported to the gsmSCF.
End of Reply Digit String	O	-	-	O	-	-	This IE, if present, indicates the digit string that denotes the end of the digits to be collected. If triggering takes place due to the detection of the End of reply digit string, then this string shall be included in the digit string to be reported to the gsmSCF. If the interdigit timeout expires when the Start Digit String, if present, is complete and the Minimum Number Of Digits has been detected and the End Digit String, if present, has been partially detected then triggering shall take place. The partially detected End Of Reply Digit String shall be included in the string to be reported to the gsmSCF.
Cancel Digit String	O	-	-	O	-	-	This IE, if present, indicates the digit string that indicates that the input shall be erased and that digit collection, including the start digit string, if present, shall start afresh.
Start Digit String	O	-	-	O	-	-	This IE, if present, indicates the digit string that denotes the start of the digits to be collected. If this IE is absent, then the first digit entered forms part of the digits to be collected. When triggering takes place, then the Start digit string shall be included in the digit string to be reported to the gsmSCF.
Inter Digit Timeout	M	-	-	M	-	-	This IE indicates the maximum duration allowed between receipt of successive digits from the MS

#### 4.6.2.21 Reset Timer

##### 4.6.2.21.1 Description

This IF is used to reset a timer.

##### 4.6.2.21.2 Information Elements

Information element name	Status	Description
Timer Value	M	This IE specifies the value to which the indicated timer shall be set.
Timer ID	O	This IE indicates which timer shall be reset. It shall be set to 'Tssf'.
Call Segment ID	M	This IE indicates for which Call Segment in the gsmSSF the timer shall be reset.

## 4.6.2.22 Send Charging Information

### 4.6.2.22.1 Description

This IF is used to send e-parameters from the gsmSCF to the gsmSSF. If Charge Advice Information (CAI) is received from the gsmSCF, it shall replace the CAI which would be generated by the MSC and inhibit any further generation of CAI by the MSC. Further processing of the CAI by the MSC shall be in accordance with the Advice of Charge supplementary service. If the subscriber is not provisioned with the Advice of Charge supplementary service or if the VPLMN does not support this service, then no e-parameters shall be sent to the MS and no error due to this fact shall be sent back to the gsmSCF.

The IF is only used in the MO case or in the VT case.

**NOTE:** If CAI is received from the gsmSCF after charge information has been generated by the MSC and sent to the MS, the behaviour of the service may be unpredictable or incorrect; the service designer should therefore ensure that the first set of CAI is sent to the gsmSSF before charge information is sent to the MS.

### 4.6.2.22.2 Information Elements

Information element name	MO	MF	MT	VT	NC	NP	Description
SCI Billing Charging Characteristics	M	-	-	M	-	-	This IE defines the Advice Of Charge related information to be provided to the Mobile Station.
Leg ID	M	-	-	M	-	-	This IE indicates the leg to which the charging information shall be sent.

SCI Billing Charging Characteristics contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
AoC After Answer	S,E	-	-	S,E	-	-	This IE is described in a table below. This IE is present after an Answer event has been detected from the called party, the current connected SRF or the temporary connection.
AoC Before Answer	S,E	-	-	S,E	-	-	This IE is described in a table below. This IE is present before an Answer event has been detected from the called party, the current connected SRF or the temporary connection.

AoC Before Answer contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
AoC Initial	M	-	-	M	-	-	This IE contains CAI elements as defined in 3GPP TS 22.024 [3].
AoC Subsequent	O	-	-	O	-	-	This IE is described in a table below.

AoC Subsequent contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
CAI Elements	M	-	-	M	-	-	This IE contains CAI elements as defined in 3GPP TS 22.024 [3].
Tariff Switch Interval	O	-	-	O	-	-	This IE indicates the tariff switch time until the next tariff switch applies.

AoC After Answer contains the following information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
CAI Elements	M	-	-	M	-	-	This IE contains CAI elements as defined in 3GPP TS 22.024 [3].
Tariff Switch Interval	O	-	-	O	-	-	This IE indicates the tariff switch time until the next tariff switch applies.

#### 4.6.2.23 Split Leg

##### 4.6.2.23.1 Description

This IF is used to request the gsmSSF to separate a leg from the initial call segment and move it to a new call segment.

In splitting the specified leg, the conditions of the leg: the armed EDPs, the Apply Charging Report pending, the Stored e-parameters, the Non-completed CAMEL logical call records, and the Call Information Report pending, are also applied for the same leg after split.

##### 4.6.2.23.2 Information Elements

Information element name	Status	Description
Leg To Be Split	M	This IE indicates the leg in the call to be split from initial call segment.
New Call Segment	M	This IE indicates the Call Segment ID to be assigned to the new call segment.

#### 4.6.3 Optional (Service logic dependent) gsmSCF to gsmSRF information flows

##### 4.6.3.1 Activity Test

###### 4.6.3.1.1 Description

This IF is used to check for the continued existence of a relationship between the gsmSCF and gsmSRF. If the relationship is still in existence, then the gsmSRF will respond. If no reply is received, then the gsmSCF will assume that the gsmSRF has failed in some way and will take the appropriate action.

###### 4.6.3.1.2 Information Elements

This IF contains no information elements.

##### 4.6.3.2 Cancel

###### 4.6.3.2.1 Description

This IF is used by the gsmSCF to request the gsmSRF to cancel a correlated previous IF.

###### 4.6.3.2.2 Information Elements

Information element name	Status	Description
Invoke ID	M	This IE specifies the IF to be cancelled.
Call Segment ID	M	This IE specifies to which call segment the cancellation of the user interaction IF shall apply.

##### 4.6.3.3 Play Announcement

###### 4.6.3.3.1 Description

This IF is used for inband interaction.

#### 4.6.3.3.2 Information Elements

Information element name	Status	Description
Information To Send	M	This IE is described in a table below.
Disconnect From IP Forbidden	M	This IE indicates whether or not the gsmSRF may be disconnected from the user when all information has been sent.
Request Announcement Complete Notification	M	This IE indicates whether or not a Specialized Resource Report shall be sent to the gsmSCF when all information has been sent.
Request Announcement Started Notification	M	This IE indicates whether or not a Specialized Resource Report shall be sent to the gsmSCF when the first announcement or tone starts.
Call Segment ID	M	This IE indicates the call segment to which the user interaction shall apply.

Information To Send contains the following information elements:

Information element name	Status	Description
Inband Info	E	This IE is described in a table below.
Tone	E	This IE is described in a table below.

Inband Info contains the following information elements:

Information element name	Status	Description
Message ID	M	This IE is described in a table below.
Number Of Repetitions	M	This IE indicates the maximum number of times the message shall be sent to the end-user.
Duration	O	This IE indicates the maximum duration time in seconds that the message shall be played/repeated. Zero indicates endless repetition.
Interval	O	This IE indicates the time interval in seconds between two repetitions.

Message ID contains the following information elements:

Information element name	Status	Description
Elementary Message ID	E	This IE indicates a single announcement
Text	E	This IE indicates a text to be sent. The text shall be transformed to inband information (speech) by the gsmSRF.
Elementary Message IDs	E	This IE indicates a sequence of announcements
Variable Message	E	This IE indicates an announcement with one or more variable parts.

Tone contains the following information elements:

Information element name	Status	Description
Tone ID	M	This IE indicates the tone to be sent.
Duration	O	This IE indicates the maximum duration in seconds that the message shall be played/repeated. Zero indicates endless repetition.

#### 4.6.3.4 Prompt And Collect User Information

##### 4.6.3.4.1 Description

This IF is used to interact with a call party in order to collect information.

#### 4.6.3.4.2 Information Elements

Information element name	Status	Description
Collected Info	M	This IE is described in a table below.
Information To Send	O	This IE is described in subclause 4.6.3.3.2. This IE indicates an announcement or a tone to be sent to the end user by the gsmSRF.
Disconnect From IP Forbidden	M	This IE indicates whether the gsmSRF may be disconnected from the user when all information has been sent.
Request Announcement Started Notification	M	This IE indicates whether or not a Specialized Resource Report shall be sent to the gsmSCF when the first announcement or tone starts.
Call Segment ID	M	This IE indicates the call segment to which the user interaction shall apply.

Collected Info contains the following information element:

Information element name	Status	Description
Collected Digits	M	This IE is described in a table below.

Collected Digits contains the following information elements:

Information element name	Status	Description
Minimum Number Of Digits	M	This IE indicates the minimum number of valid digits to be collected. The value of this IE includes the length of the Start digit string, if present, and the length of the End of reply digit string, if present.
Maximum Number Of Digits	M	This IE specifies the maximum number of valid digits to be collected. The value of this IE includes the length of the Start digit string, if present, and the length of the End of reply digit string, if present.
End Of Reply Digit	O	This IE indicates the digit(s) used to signal the end of input.
Cancel Digit	O	If this IE is present then the cancel digit can be entered by the user to request a possible retry.
Start Digit	O	If this IE is present then the start digit(s) indicates the start of the valid digits to be collected.
First Digit Time Out	O	If this IE is present then the first digit shall be received before the expiration of the first digit timer expiration.
Inter Digit Time Out	O	If this IE is present then any subsequent valid or invalid digit shall be received by the gsmSRF before the inter digit timer expires.
Error Treatment	O	This IE indicates what specific action shall be taken by the gsmSRF in the event of error conditions occurring.
Interruptable Ann Ind	O	If this IE is set to TRUE (default value) then the announcement is interrupted after the first valid or invalid digit received by the gsmSRF. If this IE is present and explicitly set to FALSE then the announcement will not be interrupted after the first digit is received by the gsmSRF.
Voice Information	O	If this IE is set to FALSE (default value) then all valid or invalid digits are entered by DTMF. If this IE is set to TRUE then the calling user is required to provide all valid or invalid information by speech.
Voice Back	O	If this IE is set to FALSE (default value) then no voice back information is given by the gsmSRF. If this IE is set to TRUE then the valid input digits received by the gsmSRF will be announced back to the calling user immediately after the end of input is received.

### 4.6.4 gsmSRF to gsmSCF information flows

#### 4.6.4.1 Activity Test ack

##### 4.6.4.1.1 Description

This IF is the response to the Activity Test.

##### 4.6.4.1.2 Information Elements

This IF contains no information elements.

#### 4.6.4.2 Assist Request Instructions

##### 4.6.4.2.1 Description

This IF is sent to the gsmSCF by a gsmSSF which is acting as the assisting gsmSSF or by a gsmSRF.

##### 4.6.4.2.2 Information Elements

Information element name	Status	Description
Correlation ID	M	This IE is used to associate the Assist Request Instructions IF from an assisting gsmSSF or by a gsmSRF with the Initial DP IF from the initiating gsmSSF.
IP SSP Capabilities	M	This IE indicates which SRF resources are attached, available and supported within the MSC where the gsmSSF resides or the IP in which the gsmSRF resides.

#### 4.6.4.3 Prompt And Collect User Information ack

##### 4.6.4.3.1 Description

This IF is used by the gsmSRF to indicate the result of a Prompt And Collect User Information IF.

##### 4.6.4.3.2 Information Elements

Information element name	Status	Description
Digits Response	C	This IE indicates the digit sequence received from the end user.

#### 4.6.4.4 Specialized Resource Report

##### 4.6.4.4.1 Description

This IF is used in response to a PlayAnnouncement IF when the Request Announcement Complete Notification IE is set to TRUE in the requesting IF.

This IF is used in response to a Prompt and Collect User Information IF when the Request Announcement Started Notification IE is set to TRUE in the requesting IF.

##### 4.6.4.4.2 Information Elements

Information element name	Status	Description
All Announcements Complete	E	This IE indicates that all the announcements and tones are complete.
First Announcement Started	E	This IE indicates that the first announcement or tone has started.

#### 4.6.5 gsmSCF to Assisting SSF information flows

##### 4.6.5.1 Activity Test

##### 4.6.5.1.1 Description

This IF is used to check for the continued existence of a relationship between the gsmSCF and assistSSF. If the relationship is still in existence, then the assistSSF will respond. If no reply is received, then the gsmSCF will assume that the assistSSF has failed in some way and will take the appropriate action.

#### 4.6.5.1.2 Information Elements

This IF contains no information elements.

#### 4.6.5.2 Cancel

##### 4.6.5.2.1 Description

This IF is described in subclause 4.6.3.2. The following difference applies:

- The Call Segment ID information element is not used.

#### 4.6.5.3 Connect To Resource

##### 4.6.5.3.1 Description

This IF is described in subclause 4.6.2.7. The following difference applies:

- The Call Segment ID information element is not used.

#### 4.6.5.4 Play Announcement

##### 4.6.5.4.1 Description

This IF is described in subclause 4.6.3.3. The following difference applies:

- The Call Segment ID information element is not used.

#### 4.6.5.5 Prompt And Collect User Information

##### 4.6.5.5.1 Description

This IF is described in subclause 4.6.3.4. The following difference applies:

- The Call Segment ID information element is not used.

#### 4.6.5.6 Reset Timer

##### 4.6.5.6.1 Description

This IF is described in subclause 4.6.2.21. The following difference applies:

- The Call Segment ID information element is not used.

### 4.6.6 Assisting SSF to gsmSCF information flows

#### 4.6.6.1 Activity Test ack

##### 4.6.6.1.1 Description

This IF is the response to the Activity Test.

##### 4.6.6.1.2 Information Elements

This IF contains no information elements.

#### 4.6.6.2 Assist Request Instructions

##### 4.6.6.2.1 Description

This IF is described in subclause 4.6.4.2.

#### 4.6.6.3 Prompt And Collect User Information ack (received information)

##### 4.6.6.3.1 Description

This IF is described in subclause 4.6.4.3.

#### 4.6.6.4 Specialized Resource Report

##### 4.6.6.4.1 Description

This IF is described in subclause 4.6.4.4.

### 4.6.7 HLR to VLR information flows

#### 4.6.7.1 Delete Subscriber Data

##### 4.6.7.1.1 Description

This IF is used by an HLR to delete CAMEL subscription data from a VLR. It is specified in 3GPP TS 29.002 [32].

##### 4.6.7.1.2 Information Elements

The Delete Subscriber Data IF contains the following CAMEL specific information elements:

Information element name	Status	Description
CAMEL Subscription Info Withdraw	O,E	This IE identifies that all CSIs shall be deleted from the subscriber data in the VLR.
Specific CSI Withdraw	O,E	This IE indicates that one or more specific elements of CAMEL Subscription Info shall be deleted from the VLR. The specific elements of CAMEL Subscription Info which may be deleted are: - O-CSI with TDP criteria for O-CSI; - TIF-CSI; - D-CSI; - VT-CSI with TDP criteria for VT-CSI. This IE should not be present when CAMEL Subscription Info Withdraw is present.

#### 4.6.7.2 Insert Subscriber Data

##### 4.6.7.2.1 Description

This IF is used by an HLR to update a VLR with certain subscriber data. This IF is specified in 3GPP TS 29.002 [32].

##### 4.6.7.2.2 Information Elements

Insert Subscriber Data contains the following CAMEL specific information elements for circuit switched call control:

Information element name	Status	Description
O-CSI	O	This IE is described in a table below. This IE identifies the subscriber as having originating CAMEL services.
D-CSI	O	This IE is described in a table below. This IE identifies the subscriber as having originating CAMEL dialled services.
VT-CSI	O	This IE is described in a table below. This IE identifies the subscriber as having terminating CAMEL services in the VMSC.

O-CSI contains the following information elements:

Information element name	Status	Description
gsmSCF Address	M	This IE is described in subclause 4.3.1
Service Key	M	This IE is described in subclause 4.3.1.
Default Call Handling	M	This IE is described in subclause 4.3.1.
TDP List	M	This IE is described in subclause 4.3.1.
DP Criteria	O	This IE is described in subclause 4.3.1.
CAMEL Capability Handling	C	This IE is described in subclause 4.3.1. If this IE is absent, this indicates that CAMEL phase 1 support is requested.

D-CSI contains the following information elements:

Information element name	Status	Description
gsmSCF Address	M	This IE is described in subclause 4.3.2.
Service Key	M	This IE is described in subclause 4.3.2.
Default Call Handling	M	This IE is described in subclause 4.3.2.
DP Criteria	M	This IE is described in subclause 4.3.2.
CAMEL Capability Handling	M	This IE is described in subclause 4.3.2. The CAMEL Capability Handling shall indicate CAMEL phase 3 or higher.

VT-CSI contains the following information elements:

Information element name	Status	Description
gsmSCF Address	M	This IE is described in subclause 4.3.6.
Service Key	M	This IE is described in subclause 4.3.6.
Default Call Handling	M	This IE is described in subclause 4.3.6.
TDP List	M	This IE is described in subclause 4.3.6.
DP Criteria	O	This IE is described in subclause 4.3.6.
CAMEL Capability Handling	M	This IE is described in subclause 4.3.6. The CAMEL Capability Handling shall indicate CAMEL phase 3 or higher.

### 4.6.7.3 Provide Subscriber Info

#### 4.6.7.3.1 Description

This IF is described in TS 23.018 [12]; it is used by the HLR to request information (any one or more of subscriber state, subscriber location, IMEI & software version and MS classmark information for the CS domain) from the VLR at any time.

### 4.6.7.4 Provide Roaming Number

#### 4.6.7.4.1 Description

This IF is specified in 3GPP TS 23.018 [12]; it is used by the HLR to request a roaming number from the VLR.

#### 4.6.7.4.2 Information Elements

Provide Roaming Number contains the following CAMEL specific information elements:

Information element name	Status	Description
Suppression Of Announcements	S	This IE indicates that announcements or tones generated as a result of unsuccessful call establishment shall be suppressed. It shall be present if the HLR received it in the Send Routeing Info IF.
Call Reference Number	M	This IE carries the Call Reference Number provided by the GMSC or the gsmSCF in the Send Routeing Info IF.
GMSC Or gsmSCF Address	M	This IE is the E.164 address of the GMSC for an MT call or the E.164 address of the gsmSCF for a gsmSCF initiated call.
Alerting Pattern	S	This IE indicates the kind of Alerting Pattern to be applied. It shall be present if the HLR received it from the GMSC or the gsmSCF in the Send Routeing Info IF.
Supported CAMEL Phases In GMSC	S	This IE indicates the CAMEL Phases supported in the GMSC. It shall be present if the HLR received it from the GMSC or the gsmSCF in the Send Routeing Info.
Supported CAMEL4 Subsets In GMSC	S	This IE indicates the CAMEL phase 4 subsets supported in the GMSC. It shall be present if the HLR received it from the GMSC or the gsmSCF in the Send Routeing Info.
Suppress VT-CSI	S	This IE indicates that VT-CSI shall be suppressed for the called party. This IE shall be present if the HLR received it in the Send Routeing Info IF.
OR not Supported In GMSC	S	This IE indicates that the VMSC should not attempt to invoke Optimal Routeing of late call forwarding. It shall be present if this IF was triggered by a Send Routeing IF for a gsmSCF initiated call.

### 4.6.8 VLR to HLR information flows

#### 4.6.8.1 Insert Subscriber Data ack

##### 4.6.8.1.1 Description

This IF is used by the VLR to indicate to the HLR the result of the Insert Subscriber Data IF. It is specified in 3GPP TS 29.002 [32].

##### 4.6.8.1.2 Information Elements

Insert Subscriber Data ack contains the following CAMEL specific information element:

Information element name	Status	Description
Supported CAMEL Phases	S	This IE identifies which CAMEL phases are supported by the VMSC/VLR. It shall be present when a CSI has been included in the ISD.
Supported CAMEL4 Subsets	S	This IE indicates the CAMEL phase 4 subsets supported in the VMSC/VLR. It shall be present if a CSI has been included in the ISD.

#### 4.6.8.2 Provide Subscriber Info ack

##### 4.6.8.2.1 Description

This IF is described in TS 23.018 [12]; it is used by the VLR to provide the requested information to the HLR.

#### 4.6.8.3 Update Location

##### 4.6.8.3.1 Description

This IF is used by the VLR to provide information about supported CAMEL phases to the HLR. It shall be present when a CSI has been included in the Insert Subscriber Data IF.

#### 4.6.8.3.2 Information Elements

Update Location contains the following CAMEL specific information element:

Information element name	Status	Description
Supported CAMEL Phases	S	This IE indicates which phases of CAMEL are supported. It shall be present if a CAMEL phase higher than phase 1 is supported. Otherwise may be absent.
Supported CAMEL4 Subsets	S	This IE indicates the CAMEL phase 4 subsets supported in the VMSC/VLR. It shall be present if the "Supported CAMEL Phases" IE indicates support of CAMEL phase 4.

#### 4.6.8.4 Restore Data

##### 4.6.8.4.1 Description

This IF is used by the VLR to provide the information about supported CAMEL phases to the HLR.

##### 4.6.8.4.2 Information Elements

Restore Data contains the following CAMEL specific information element:

Information element name	Status	Description
Supported CAMEL Phases	S	This IE indicates which phases of CAMEL are supported. It shall be present if a CAMEL phase higher than phase 1 is supported. Otherwise may be absent.
Supported CAMEL4 Subsets	S	This IE indicates the CAMEL phase 4 subsets supported in the VMSC/VLR. It shall be present if the "Supported CAMEL Phases" IE indicates support of CAMEL phase 4.

#### 4.6.9 HLR to GMSC information flows

##### 4.6.9.1 Send Routeing Info ack

##### 4.6.9.1.1 Description

This IF is specified in 3GPP TS 23.018 [12]; it is used by the HLR to transfer the requested routeing information to the GMSC.

##### 4.6.9.1.2 Information Elements

Send Routeing Info ack contains the following CAMEL specific information elements:

Information element name	Status	Description
Location Information	C	This IE indicates the location of the served subscriber.
O—CSI	S	O-CSI is defined in subclause 4.3.1. This IE identifies the subscriber as having originating CAMEL services. It shall be present if O-CSI is active, and CFU or CFNRc has been invoked, or if both O-CSI and T-CSI are active.
D—CSI	S	D-CSI is defined in subclause 4.3.2. This IE identifies the subscriber as having originating CAMEL dialled services. It shall be present if D-CSI is active, and CFU or CFNRc has been invoked, or if both D-CSI and T-CSI are active.
Subscriber State	C	This IE indicates the status of the MS. The possible values of the IE are: - CAMEL Busy: The VLR has indicated that the MS is engaged in a transaction for a mobile originating or terminated circuit-switched call. - Network Determined Not Reachable: The VLR has indicated that the network can determine from its internal data that the MS is not reachable. - Assumed Idle: The VLR has indicated that the state of the MS is neither "CAMEL Busy" nor "Network Determined Not Reachable". - Not Provided From VLR: The VLR did not provide any information on subscriber state even though it was requested.
T—CSI	S	This IE is described in a table below. This IE identifies the subscriber as having terminating CAMEL services. It shall be present if T-CSI is active and no Suppress T-CSI indicator is present in the Send Routeing Info IF.
Basic Service Code	C	This IE indicates the type of basic service i.e., teleservice or bearer service.
CUG Subscription Flag	S	This IE indicates if the called party has a CUG subscription. It shall be present only if the T-CSI is active and included in the Send Routing Information ack IF.
Supported CAMEL Phases In VMSC	S	This IE indicates the supported CAMEL phases of the VLR. It shall be present if known by the HLR, otherwise it shall be absent.
Supported CAMEL4 Subsets In VMSC	S	This IE indicates the CAMEL phase 4 subsets supported in the VMSC. It shall be present if known by the HLR, otherwise it shall be absent.
VMSC Address	M	This IE indicates the E.164 address of the VMSC in whose area the B subscriber is currently registered.

Location Information is defined in 3GPP TS 23.018 [12]. The following differences apply:

Information element name	Status	Description
Service area ID	C,E	See 3GPP TS 23.018 [12].
Cell ID	C,E	See 3GPP TS 23.018 [12].
Current Location Retrieved	-	Not applicable
Location area ID	C,E	See 3GPP TS 23.003 [7].
Selected LSA Identity	S	This IE indicates the LSA identity associated with the current position of the MS. Shall be present if the LSA ID in the subscriber data matches the LSA ID of the current cell. If there are multiple matches the LSA ID with the highest priority shall be sent. See 3GPP TS 23.073 [17].

T-CSI contains the following information elements:

Information element name	Status	Description
gsmSCF Address	M	This IE is described in subclause 4.3.5.
Service Key	M	This IE is described in subclause 4.3.5.
Default Call Handling	M	This IE is described in subclause 4.3.5.
TDP List	M	This IE is described in subclause 4.3.5.
CAMEL Capability Handling	C	This IE is described in subclause 4.3.5. If this IE is absent then this indicates that CAMEL phase 1 support is requested.

## 4.6.10 GMSC to HLR information flows

### 4.6.10.1 Send Routeing Info

#### 4.6.10.1.1 Description

This IF is described in 3GPP TS 23.018 [12]; it is used to request information from the HLR to route an MT call.

#### 4.6.10.1.2 Information Elements

Send Routeing Info contains the following CAMEL specific information elements:

Information element name	Status	Description
Alerting Pattern	S	This IE indicates the kind of Alerting Pattern to be applied. It shall be present if it was received from the gsmSCF or set by the gsmSSF.
Suppression Of Announcement	S	This IE indicates that announcements or tones generated as a result of unsuccessful call setup shall be suppressed. It shall be present in the interrogation if available, i.e., when it has been received from the gsmSCF.
Suppress T-CSI	S	This IE indicates that T-CSI shall be suppressed. It shall always be present in the second interrogation or if it was received from the gsmSCF due to an Initiate Call Attempt IF.
Supported CAMEL Phases	M	This IE lists the supported CAMEL phases.
Supported CAMEL4 Subsets	M	This IE indicates the CAMEL phase 4 subsets supported in the GMSC.
Call Reference Number	M	This IE carries the Call Reference Number allocated for the call by the GMSC. It shall be allocated once per call and present in both first and second interrogations.
GMSC Address	M	This IE is the E.164 address of the GMSC.
Call Diversion Treatment Indicator	S	This IE indicates whether or not the call can be forwarded using the Call Forwarding or Call Deflection supplementary services. It shall be present if it was received within Forward Service Interaction Indicator in Service Interaction Indicators Two from the ISUP Initial Address Message or previous CAMEL processing.

## 4.6.11 VMSC to GMSC information flows

### 4.6.11.1 Resume Call Handling

#### 4.6.11.1.1 Description

This IF is described in 3GPP TS 23.079 [18], it is used to request the GMSC to take over handling the call so that it can be forwarded from the GMSC.

#### 4.6.11.1.2 Information Elements

Resume Call Handling contains the following CAMEL specific information elements:

Information element name	Status	Description
O-CSI	S	This IE indicates that CAMEL handling applies for an optimally routed late forwarded call. This IE shall be present if CAMEL handling applies; otherwise it shall be absent. Trigger criteria for DP Collected_Information, if present, shall be omitted from this IF. Trigger criteria for DP Route_Select_Failure, if present, shall be included in this IF.
D-CSI	S	This IE indicates that CAMEL handling applies for an optimally routed late forwarded call. This IE shall be present if CAMEL handling applies; otherwise it shall be absent.

## 4.6.12 MSC to VLR information flows

### 4.6.12.1 Send Info For ICA

#### 4.6.12.1.1 Description

This IF is used to request the VLR to provide information to handle an outgoing call leg created by the gsmSCF.

#### 4.6.12.1.2 Information Elements

Information element name	NP	Description
Called Number	M	This IE indicates the E.164 number of the call leg destination.
IMSI	M	This IE is the IMSI of the served CAMEL subscriber.
CUG Index	C	For the definition of this IE, see 3GPP TS 23.085 [21].
Suppress Preferential CUG	C	For the definition of this IE, see 3GPP TS 23.085 [21].
Suppress CUG Outgoing Access	C	For the definition of this IE, see 3GPP TS 23.085 [21].
Suppress Outgoing Call Barring	C	This IE indicates that outgoing call barrings shall be suppressed for the call leg.
Suppress D-CSI	S	This IE indicates that D-CSI shall be suppressed. It shall always be present in the second interrogation.
N-CSI Available	S	This IE indicates that N-CSI is available in MSC. It shall be present in the first interrogation if N-CSI is available in the MSC.

### 4.6.12.2 Send Info For Incoming Call

#### 4.6.12.2.1 Description

This IF is described in 3GPP TS 23.018 [12]; it is used to request the VLR to provide information to handle an incoming call.

#### 4.6.12.2.2 Information Elements

Send Info For Incoming Call contains the following CAMEL specific information elements:

Information element name	Status	Description
Suppress VT-CSI	S	This IE indicates that VT-CSI shall be suppressed. It shall never be present in the first interrogation; it shall always be present in the second interrogation.
Call Diversion Treatment Indicator	S	This IE indicates whether or not the call can be forwarded using the Call Forwarding or Call Deflection supplementary services. It shall be present if received within the Forward Service Interaction Indicator in the Service Interaction Indicators Two from the IAM or previous CAMEL processing.

### 4.6.12.3 Send Info For MT Reconnected Call

#### 4.6.12.3.1 Description

This IF is used to request the VLR to provide information to handle a reconnected MT call.

#### 4.6.12.3.2 Information Elements

Information element name	Required	Description
Called Number	M	E.164 number of the call destination.

#### 4.6.12.4 Send Info For Outgoing Call

##### 4.6.12.4.1 Description

This IF is described in 3GPP TS 23.018 [12]; it is used to request the VLR to provide information to handle an outgoing call.

##### 4.6.12.4.2 Information Elements

Send Info For Outgoing Call contains the following CAMEL specific information elements:

Information element name	Status	Description
Suppress O-CSI	S	This IE indicates that O-CSI shall be suppressed. It shall always be present in the second interrogation.
Suppress D-CSI	S	This IE indicates that D-CSI shall be suppressed. It shall always be present in the second interrogation.
N-CSI Available	S	This IE indicates that N-CSI is available in MSC. It shall be present in the first interrogation if N-CSI is available in the MSC.

#### 4.6.12.5 Send Info For Reconnected Call

##### 4.6.12.5.1 Description

This IF is used to request the VLR to provide information to handle a reconnected MO call.

##### 4.6.12.5.2 Information Elements

Information element name	Status	Description
Called Number	M	This IE indicates the E.164 number of the call destination.
Bearer Service	S,E	This IE indicates the bearer service required for the MO call, derived from the CS bearer capability information received in the setup request from the MS. One of bearer service or teleservice shall be present.
Teleservice	S,E	This IE indicates the teleservice required for the MO call, derived from the CS bearer capability information received in the setup request from the MS or from the emergency setup request from the MS. One of bearer service or teleservice shall be present.
CUG Index	S	For the definition of this IE, see 3GPP TS 23.085 [21]. It shall be present if it was received in the setup request from the MS.
Suppress Preferential CUG	S	For the definition of this IE, see 3GPP TS 23.085 [21]. It shall be present if it was received in the setup request from the MS.
Suppress CUG Outgoing Access	S	For the definition of this IE, see 3GPP TS 23.085 [21]. It shall be present if it was received in the setup request from the MS.
Suppress O-CSI	S	This IE indicates that O-CSI shall be suppressed. It shall always be present in the second interrogation.

#### 4.6.13 VLR to MSC information flows

##### 4.6.13.1 Complete Call

##### 4.6.13.1.1 Description

This IF is described in 3GPP TS 23.018 [12]; it is used to instruct the MSC to continue the connection of a call.

##### 4.6.13.1.2 Information Elements

Complete Call contains the following CAMEL specific information elements:

Information element name	MO	MF	MT	VT	NC	NP	Description
O-CSI	S	-	-	-	-	-	This IE indicates that CAMEL handling applies for an MO call. It shall be present in the response to the first interrogation for an MO call if CAMEL handling applies; otherwise it shall be absent. It shall be absent from the response to the second interrogation for an MO call.
D-CSI	C	-	-	-	-	C	This IE identifies the subscriber as having originating CAMEL dialled services.
Call Reference Number	-	-	-	M	-	-	This IE carries the Call Reference Number provided by the HLR in the Provide Roaming Number IF.
GMSC Address	-	-	-	M	-	-	This IE is the E.164 address of the GMSC.

### 4.6.13.2 Continue CAMEL Handling

#### 4.6.13.2.1 Description

This IF is used to instruct the MSC to continue the CAMEL specific handling.

#### 4.6.13.2.2 Information Elements

Information element name	Status	Description
VT-CSI	M	This IE identifies the subscriber as having terminating CAMEL services in the VMSC.
IMSI	M	This IE contains the IMSI of the B subscriber.
MSISDN	S	This IE contains the E.164 number of the B subscriber. It will be used to create the redirecting number presented to the C subscriber. It shall be present if the call is to be forwarded or if it has been provided by the HLR in the Provide Roaming Number IF, otherwise it shall be absent.
CUG Interlock	S	For the definition of this IE, see 3GPP TS 23.085 [21]. It shall be present if the VLR has determined that the forwarded call is to be treated as a CUG call in accordance with the rules in 3GPP TS 23.085 [21], otherwise it shall be absent.
CUG Outgoing Access	S	For the definition of this IE, see 3GPP TS 23.085 [21]. It shall be present if the VLR has determined that the forwarded call is to be treated as a CUG call with outgoing access in accordance with the rules in 3GPP TS 23.085 [21], otherwise it shall be absent.
Location Information	S	This IE contains the information to define the location of the MS: see definition in 3GPP TS 23.018 [12]. It shall be present if location information was requested and is available; otherwise it shall be absent.
GMSC-Address	M	This IE is the E.164 address of the GMSC which was received in the Provide Roaming Number.
Call Reference Number	M	This IE carries the Call Reference Number provided by the HLR in the Provide Roaming Number IF.
ExtBasic Service Code	M	This IE indicates the type of basic service i.e., teleservice or bearer service.

### 4.6.13.3 Process Call Waiting

#### 4.6.13.3.1 Description

This IF is described in 3GPP TS 23.018 [12]; it is used to instruct the MSC to continue the connection of a waiting call.

#### 4.6.13.3.2 Information Elements

Process Call Waiting contains the following CAMEL specific information elements:

Information element name	Status	Description
Call Reference Number	M	This IE carries the Call Reference Number provided by the HLR in the Provide Roaming Number IF.
GMSC Address	M	This IE is the E.164 address of the GMSC.

#### 4.6.13.4 Send Info For ICA negative response

##### 4.6.13.4.1 Description

This IF is used to indicate that the outgoing call leg for which the MSC requested subscription information shall not be connected.

##### 4.6.13.4.2 Information Elements

The negative response information elements can take the following values:

- Bearer service not provisioned;
- Call barred (Operator determined barring);
- Call barred (Supplementary service barring);
- CUG reject (Inconsistent access information – index incompatible with basic service);
- CUG reject (Inconsistent access information – no CUG selected);
- CUG reject (Outgoing calls barred within the CUG);
- CUG reject (Unknown CUG index);
- Teleservice not provisioned.

#### 4.6.13.5 Send Info For Incoming Call ack

##### 4.6.13.5.1 Description

This IF is described in 3GPP TS 23.018 [12]; it is used to indicate that the incoming call for which the MSC requested subscription information shall be forwarded.

##### 4.6.13.5.1 Information Elements

Send Info For Incoming Call ack contains the following CAMEL specific information elements:

Information element name	Status	Description
O-CSI	S	This IE indicates that originating CAMEL service handling applies for a forwarded call. It shall be present if originating CAMEL service handling applies; otherwise it shall be absent.
D-CSI	S	This IE indicates that originating CAMEL dialled service handling applies for a forwarded call. It shall be present if originating CAMEL dialled service handling applies; otherwise it shall be absent.
Suppression Of Announcement	S	This IE indicates that announcements or tones generated when the call is forwarded shall be suppressed. It shall be present if it was received in the Provide Roaming Number for this call.
Call Reference Number	M	This IE carries the Call Reference Number provided by the HLR in the Provide Roaming Number IF.
GMSC Address	M	This IE is the E.164 address of the GMSC.

#### 4.6.13.6 Send Info For Incoming Call negative response

##### 4.6.13.6.1 Description

This IF is described in 3GPP TS 23.018 [12]; it is used to indicate that the incoming call for which the MSC requested subscription information shall not be connected.

##### 4.6.13.6.2 Information Elements

Send Info For Incoming Call negative response contains the following CAMEL specific information element which may be attached as an IE to any of the negative response values defined in 3GPP TS 23.018 [12]:

Information element name	Status	Description
Suppression Of Announcement	S	This IE indicates that announcements or tones generated as a result of unsuccessful call establishment shall be suppressed. It shall be present if it was received in the Provide Roaming Number for this call.

#### 4.6.13.7 Send Info For MT Reconnected Call ack

##### 4.6.13.7.1 Description

This IF is used to instruct the MSC to continue the connection of a reconnected MT call.

##### 4.6.13.7.2 Information Elements

Information element name	Required	Description
O-CSI	S	This IE indicates that originating CAMEL service handling applies for the reconnected call. It shall be present if originating CAMEL service handling applies; otherwise it shall be absent.
D-CSI	S	This IE indicates that originating CAMEL dialled service handling applies for the reconnected call. It shall be present if originating CAMEL dialled service handling applies; otherwise it shall be absent.

#### 4.6.13.8 Send Info For MT Reconnected Call negative response

##### 4.6.13.8.1 Description

This IF is used to indicate that the reconnected MT call for which the MSC requested subscription information shall not be connected.

##### 4.6.13.8.2 Information Elements

The negative response information element can take the following value:

- CUG reject

#### 4.6.13.9 Send Info For Reconnected Call ack

##### 4.6.13.9.1 Description

This IF is used to instruct the MSC to continue the connection of a reconnected MO call.

##### 4.6.13.9.2 Information Elements

Send Info For Reconnected Call ack does not contain any information elements.

## 4.6.13.10 Send Info For Reconnected Call negative response

### 4.6.13.10.1 Description

This IF is used to indicate that the reconnected MO call for which the MSC requested subscription information shall not be connected.

### 4.6.13.10.2 Information Elements

The negative response information element can take the following value:

- Call barred (Operator determined barring);
- Call barred (Supplementary service barring).

## 4.6.14 gsmSCF to HLR information flows

### 4.6.14.1 Send Routeing Info

#### 4.6.14.1.1 Description

This IF is defined in 3GPP TS 23.018 [12] and subclause 4.6.10.1; it is used to request information from the HLR to route a gsmSCF initiated call.

#### 4.6.14.1.2 Information Elements

Send Routeing Info from the gsmSCF contains the following information elements:

Information element name	Status	Description
MSISDN	M	This IE indicates the MSISDN of the called subscriber.
Alerting Pattern	O	This IE indicates the kind of Alerting Pattern to be applied.
CUG Interlock	O	For the definition of this IE, see 3GPP TS 23.085 [21].
CUG Outgoing Access	O	For the definition of this IE, see 3GPP TS 23.085 [21].
Suppression Of Announcement	O	This IE indicates that announcements or tones generated as a result of unsuccessful call establishment shall be suppressed.
Suppress T—CSI	M	This IE indicates that CAMEL subscription information should not be returned in the first Send Routeing Info ack (to avoid the need for a second interrogation).
Supported CAMEL Phases	O	This IE indicates the CAMEL Phases supported by the gsmSCF.
Supported CAMEL4 Subsets	S	This IE indicates the CAMEL phase 4 subsets supported by the gsmSCF. It shall be present if the "Supported CAMEL Phases" IE indicates support of CAMEL phase 4.
Call Reference Number	M	This IE carries the Call Reference Number allocated for the call by the gsmSCF.
GMSC Or gsmSCF Address	M	This IE is the E.164 address of the gsmSCF.
Call Diversion Treatment Indicator	O	This IE indicates whether or not the call is allowed to be forwarded on behalf of the called party using the Call Forwarding supplementary service.
Pre-paging Supported	S	This IE shall be present if the gsmSCF supports pre-paging, otherwise it shall be absent.
Interrogation Type	M	This IE shall contain the value "Basic Call".
Long FTN Supported	O	This IE indicates that the gsmSCF supports Long Forwarded to Numbers.
gsmSCF Initiated Call	M	This IE indicates that the IF was originated by a gsmSCF.
Suppress Incoming Call Barring	O	This IE indicates that Incoming Call Barrings shall be suppressed for the called party.
Suppress VT-CSI	O	This IE indicates that VT-CSI shall be suppressed.

## 4.6.15 HLR to gsmSCF information flows

### 4.6.15.1 Send Routeing Info ack

#### 4.6.15.1.1 Description

This IF is described in subclause 4.6.9.1; it is used by the HLR to transfer the requested routeing information to the gsmSCF.

### 4.6.15.2 Send Routeing Info negative response

#### 4.6.15.2.1 Description

This IF is described in 3GPP TS 23.018 [12]; it is used by the HLR to indicate that the routeing information is not available.

## 4.7 Interaction with supplementary services

### 4.7.1 Line identification

For an MO call subject to CAMEL interactions, the gsmSCF shall have the option to include the Calling Party Restriction Indicator parameter in the Connect information flow to the gsmSSF. This will be sent to the MSC and shall indicate whether the CLI Presentation Indicator present in the Calling Party Number Parameter shall be set by CAMEL action to Restricted.

### 4.7.2 Call forwarding services

#### 4.7.2.1 Registration of Call Forwarding

The functional behaviour for the registration of the Call Forwarding supplementary service is defined in 3GPP TS 23.082 [19]. The procedure specific to CAMEL is defined in this subclause:

- CAMEL\_Check\_CF\_Interaction.

## Procedure CAMEL\_Check\_CF\_Interaction

1(1)

Procedure in the HLR to check the provision of TIF-CSI.

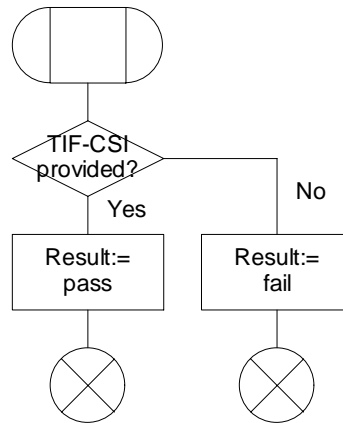

Figure 4.116a: Procedure CAMEL\_Check\_CF\_Interaction (sheet 1)

#### 4.7.2.2 Invocation of Call Forwarding

The functional behaviour for the invocation of the Call Forwarding supplementary service is defined in 3GPP TS 23.018 [12] and 3GPP TS 23.082 [19]. The following additional requirements apply.

When Call Forwarding is invoked for a CAMEL subscriber with O-CSI, the gsmSSF shall send the FTN to the gsmSCF in the format in which it was received from the HLR. When Call Forwarding is invoked for a CAMEL subscriber with D-CSI or if an N-CSI is present in the forwarding MSC, then the FTN shall be treated as defined in subclause 4.2.1.2.2.

If the Service Interaction Indicators Two parameter was included in the Initial Address Message, the Continue With Argument information flow or the Connect message, the appropriate indicator shall be applied for the forwarded call.

An HLR shall not send an FTN which is not in international format to a GMSC which does not support CAMEL phase 2, i.e. if the HLR is handling a request from a GMSC for routing information and the forwarded-to number is registered in a format other than international, the service logic in the HLR shall behave as if the call forwarding is provisioned but not registered.

#### 4.7.2.3 Invocation of Call Deflection

The functional behaviour for the invocation of the Call Deflection supplementary service is defined in 3GPP TS 23.018 [12] and 3GPP TS 23.072 [16]. The following additional requirements apply.

When Call Deflection is invoked by a CAMEL subscriber with O-CSI, the gsmSSF shall send the DTN to the gsmSCF in the format in which it was received from the MS. When Call Deflection is invoked by a CAMEL subscriber with D-CSI or if an N-CSI is present in the VMSC, then the DTN shall be treated as defined in subclause 4.2.1.2.2.

If the Service Interaction Indicators Two parameter was included in the Initial Address Message, the Continue With Argument information flow or the Connect information flow, the appropriate indicator shall be applied for the deflected call.

#### 4.7.3 Call Barring services

When a CAMEL subscriber with O-CSI and TIF-CSI attempts to activate a conditional call barring service (BOIC,BOIC-exHC), the HLR shall not check the interactions with call forwarding.

When the gsmSCF initiates a call to a subscriber, the gsmSCF can indicate to the HLR that incoming call barrings shall be suppressed for this call.

When the gsmSCF creates an additional call leg in an existing call, the gsmSCF can indicate to the VLR (via the gsmSSF and MSC) that outgoing call barrings shall be suppressed for this call leg.

#### 4.7.4 Closed User Group

For a CUG subscriber with CAMEL services:

- The HLR shall store (and transfer to the VLR) the necessary subscriber data to ensure that the served subscriber is not unnecessarily prevented by CUG constraints from originating calls.
- The HLR shall store the necessary subscriber data to ensure that the served subscriber is not unnecessarily prevented by CUG constraints from receiving calls.

For an MO or MF call, the CUG information for that call shall be sent to the gsmSCF in the Initial DP information flow.

If the gsmSCF returns a Continue information flow, the call shall continue with the original CUG information unchanged.

If the gsmSCF returns a Connect or Continue With Argument information flow, the CUG handling in table 4.7 applies.

**Table 4.7: CUG handling on receipt of Connect or Continue With Argument for an MO or MF call**

CUG parameters in information flow	Handling
Non-CUG call (note 1)	Remove CUG information for the call and continue as a non-CUG call
CUG information (note 2)	Call shall continue with modified CUG information
No CUG information	Call shall continue with original CUG information
NOTE 1: Received in Service Interaction Indicators Two IE.	
NOTE 2: CUG information consists of at least one of CUG Interlock Code and Outgoing Access Indicator.	

For an MT call which is to be routed to the terminating subscriber, the CUG information shall be extracted from the Send Routing Information ack and sent to the gsmSCF in the Initial DP, but the gsmSCF shall not have the ability to change the CUG information for the call.

For an VT call which is to be routed to the terminating subscriber, the CUG information shall be extracted from the incoming ISUP IAM and sent to the gsmSCF in the Initial DP, but the gsmSCF shall not have the ability to change the CUG information for the call.

For an MT or VT call which is subject to CAMEL forwarding, the gsmSCF shall return a Connect information flow and the CUG handling in table 4.7 applies.

## 5 USSD to/from gsmSCF

### 5.1 Architecture

#### 5.1.1 Functional Entities used for CAMEL

This subclause describes the functional architecture needed to support CAMEL handling of USSD to/from gsmSCF. The functional model of USSD in an HLR that supports CAMEL is shown in figure 5.1. The phase 2 USSD handler is defined in 3GPP TS 23.090 [23]. Phase 1 USSD information flows may be relayed from the HLR to the gsmSCF. CAMEL introduces a "CAMEL USSD application" which is invoked by the USSD handler. The CAMEL USSD functional entities and application behaviour is specified in this subclause.

**Figure 5.1: Handling of USSD to and from a CAMEL subscriber**

**HLR:** The HLR stores for subscribers requiring CAMEL support the information relevant to the current subscription regarding U-CSI. The UG-CSI is stored as global data applicable to all subscribers. The U-CSI and the UG-CSI are stored in the HLR only.

**gsmSCF:** see subclause 3.1.

## 5.1.2 Interfaces defined for CAMEL

This subclause describes the different interfaces applicable to CAMEL. It specifies on a high level the functions specific to CAMEL.

### 5.1.2.1 gsmSCF - HLR interface

This interface is used for USSD information flows, both for gsmSCF-initiated dialogues and MS-initiated dialogues (relayed via HLR). It is a network operator option whether to support or not USSD information flows on this interface.

## 5.2 Description of CAMEL Subscriber Data

### 5.2.1 USSD CAMEL Subscription Information (U-CSI)

The subscription information specified in this subclause is for information only.

This subclause defines the contents of the USSD CAMEL Subscription Information (U-CSI). The U-CSI consists of a list of pairs of the following two parameters.

#### 5.2.1.1 Service Code

Service code for a specific application in a gsmSCF which interacts with the user by USSD.

#### 5.2.1.2 gsmSCF address

Address to be used to access the gsmSCF for a particular subscriber and a particular service code. The address shall be an E.164 number to be used for routing.

## 5.3 Content of the USSD General CAMEL Service Information (UG-CSI)

The service information specified in this subclause is for information only.

This subclause defines the contents of the USSD General CAMEL Service Information (UG-CSI). The allocation of the UG-CSI is independent from a particular subscriber.

The UG-CSI consists of a list of pairs of the following two parameters.

### 5.3.1 Service Code

Service code for a specific application in a gsmSCF which interacts with the user by USSD.

### 5.3.2 gsmSCF address

Address to be used to access the gsmSCF for a particular a particular service code. The address shall be an E.164 number to be used for routing.

## 5.4 Procedures

### 5.4.1 MS Initiated USSD

For the behaviour of the USSD handler in HLR when receiving a MS initiated USSD see 3GPP TS 23.090 [23].

When the USSD handler has determined that the service code present in the received USSD does not indicate that an USSD application in the HLR shall be invoked it shall route the USSD to the USSD application specific for CAMEL, i.e. the CAMEL USSD application.

The procedure at the CAMEL USSD application at the HLR is implementation dependent. The following text describes a recommended procedure.

The CAMEL USSD application shall check the U-CSI data assigned to the specific subscriber. If the service code is present in the U-CSI the USSD is routed to the gsmSCF given by the gsmSCF address stored against the service code in the U-CSI.

If the service code is not present in the U-CSI (or the subscriber does not have U-CSI defined) then the CAMEL USSD application shall check the UG-CSI data assigned to the HLR. If the service code is present in the UG-CSI then the USSD is routed to the gsmSCF given by the gsmSCF address stored against the service code in the UG-CSI.

If the service code is not present in U-CSI or UG-CSI an error (unknown application) is returned to the USSD handler.

### 5.4.2 gsmSCF Initiated USSD

The HLR may at any time receive a USSD information flow from the gsmSCF. If the subscriber can be contacted, the HLR shall set up a transaction to the VLR and forward the information flow unchanged. Any further information exchange between the gsmSCF and MSC shall be transparent to the VLR and the HLR. When one transaction is released, the HLR shall release the other. If an error is received from the MSC, the VLR shall release the transaction to the HLR and the HLR shall release the transaction to the gsmSCF.

## 5.5 Description of information flows

This subclause contains the detailed description of the information flows used by CAMEL for USSD handling.

Each Information Element (IE) is marked as Mandatory (M), Conditional (C), Specific conditions (S) or Optional (O).

An 'M' IE shall always be included. A 'C' IE shall be included if the sending entity has the necessary information to populate the IE. The conditions for the inclusion of an 'S' IE are shown in the 'Description' column of the definition table. An 'O' IE may be included or omitted as required by the service logic. This categorization is a functional classification, i.e. it defines the requirements for the stage 2 information. It is not a stage 3 classification to be used for the ASN.1 syntax of the protocol.

The following principles apply for the handling of the IEs by the receiving entity:

- The gsmSCF may silently discard any IE which it does not functionally support.
- The HLR shall return an error if it does not functionally support an IE which it receives.

Details of errors and exceptions to these rules are specified in are specified in 3GPP TS 29.002 [32].

### 5.5.1 gsmSCF to HLR information flows

#### 5.5.1.1 Unstructured SS Request

##### 5.5.1.1.1 Description

This IF is used for the gsmSCF to request data from the MS via the HLR.

## 5.5.1.1.2 Information Elements

Information element name	Status	Description
USSD String	M	This IE contains the string that will be sent to the MS.
Data Coding Scheme	M	This IE indicates the characteristics of the USSD string.
IMSI	S,E	This IE identifies the subscriber for which the information is requested. It shall be present if this IF is the first IF in a USSD dialogue, otherwise it shall be absent.
MSISDN	S,E	This IE identifies the subscriber for which the information is requested. It shall be present if this IF is the first IF in a USSD dialogue, otherwise it shall be absent.
Alerting Pattern	O	This IE indicates an alerting pattern to be sent to the MS.

## 5.5.1.2 Unstructured SS Notify

## 5.5.1.2.1 Description

This IF is used for the gsmSCF to send data to the MS via the HLR.

## 5.5.1.2.2 Information Elements

Information element name	Status	Description
USSD String	M	This IE contains the string that will be sent to the MS.
Data Coding Scheme	M	This IE indicates the characteristics of the USSD string.
IMSI	S,E	This IE identifies the subscriber for which the information is requested. It shall be present if this IF is the first IF in a USSD dialogue, otherwise it shall be absent.
MSISDN	S,E	This IE identifies the subscriber for which the information is requested. It shall be present if this IF is the first IF in a USSD dialogue, otherwise it shall be absent.
Alerting Pattern	O	This IE indicates an alerting pattern to be sent to the MS.

## 5.5.1.3 Process Unstructured SS Data ack

## 5.5.1.3.1 Description

This IF is used for the gsmSCF to send the response to the MS via the HLR for the MS initiated IF.

## 5.5.1.3.2 Information Elements

The following information element is required:

Information element name	Status	Description
SS User Data	C	This IE contains the string that will be sent to the MS.

## 5.5.1.4 Process Unstructured SS Request ack

## 5.5.1.4.1 Description

This IF is used for the gsmSCF to send the response to the MS via the HLR for the MS initiated IF.

### 5.5.1.4.2 Information Elements

Information element name	Status	Description
USSD String	S	This IE contains the string that will be sent to the MS. It shall be present if the Data Coding Scheme is present; otherwise it shall be absent.
Data Coding Scheme	S	This IE indicates the characteristics of the USSD string. It shall be present if the Data Coding Scheme is present; otherwise it shall be absent.

## 5.5.2 HLR to gsmSCF information flows

### 5.5.2.1 Unstructured SS Request ack

#### 5.5.2.1.1 Description

This IF is used for the MS to send to the gsmSCF via the HLR for the gsmSCF initiated IF.

#### 5.5.2.1.2 Information Elements

Information element name	Status	Description
USSD String	C	This IE contains the string that will be sent to the gsmSCF. It shall be present if the Data Coding Scheme is present; otherwise it shall be absent.
Data Coding Scheme	C	This IE indicates the characteristics of the USSD string. It shall be present if the Data Coding Scheme is present; otherwise it shall be absent.

### 5.5.2.2 Unstructured SS Notify ack

#### 5.5.2.2.1 Description

This IF is used for the MS to via the HLR acknowledge to the gsmSCF that the notification was received.

#### 5.5.2.2.2 Information Elements

This IE contains no information element.

### 5.5.2.3 Process Unstructured SS Data

#### 5.5.2.3.1 Description

This IF is used for the MS to request data from gsmSCF via the HLR.

#### 5.5.2.3.2 Information Elements

Information element name	Status	Description
SS User Data	M	This IE contains the string that was received from the MS.

### 5.5.2.4 Process Unstructured SS Request

#### 5.5.2.4.1 Description

This IF is used for the MS to request data from the gsmSCF via the HLR.

## 5.5.2.4.2 Information Elements

Information element name	Status	Description
USSD String	M	This IE contains the string that will be sent to the gsmSCF, including the Service Code.
Data Coding Scheme	M	This IE indicates the characteristics of the USSD string
IMSI	M	This IE identifies the subscriber.
MSISDN	S	This IE contains the basic MSISDN of the subscriber who has requested the USSD IF. This IE is used as an operator option.
Originating Entity Number	M	This IE identifies the functional entity initiating the information flow. In this case, this shall be the address of the HLR.

## 5.5.2.5 Begin Subscriber Activity

## 5.5.2.5.1 Description

This IF is used by the HLR to start subscriber activity towards the gsmSCF for USSD purposes.

## 5.5.2.5.2 Information Elements

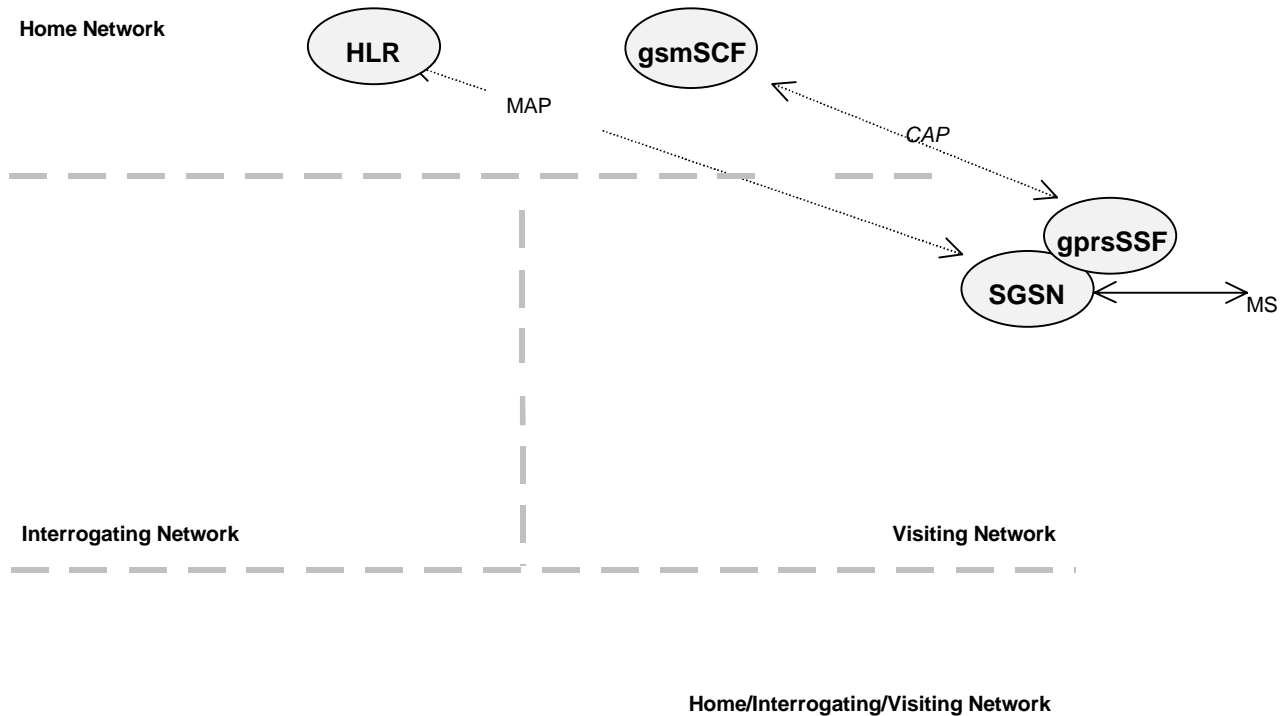

Information element name	Status	Description
IMSI	M	This IE identifies the subscriber.
Originating Entity Number	M	This IE identifies the functional entity initiating the subscriber activity. In this case, this shall be the address of the HLR.

## 6 GPRS interworking

### 6.1 Architecture

#### 6.1.1 Functional Entities used for CAMEL

This subclause describes the functional architecture needed to support GPRS interworking for CAMEL. Figure 6.1 shows the functional entities involved in a GPRS session requiring CAMEL support. The architecture is applicable to the third phase of CAMEL or higher.

**Figure 6.1: Functional architecture for support of CAMEL**

**HLR:** For subscribers requiring CAMEL support, the HLR stores the information relevant to the current subscription GPRS-CSI.

**SGSN:** When processing GPRS Attach requests or Inter-SGSN Routeing Area Updates for subscribers requiring CAMEL support, the SGSN receives a GPRS-CSI from the HLR, indicating the SGSN to request instructions from the gprsSSF. The SGSN monitors on request the GPRS events and informs the gprsSSF of these events during processing, enabling the gprsSSF to control the execution of the GPRS session or individual PDP contexts in the SGSN.

**gprsSSF:** see subclause 3.1.

**gsmSCF:** see subclause 3.1.

#### 6.1.2 Interfaces defined for CAMEL

##### 6.1.2.1 SGSN - gprsSSF interface

This is an internal interface. The interface is described in the present document to make it easier to understand the handling of DPs (arming/disarming of DPs, DP processing etc.).

### 6.1.2.2 gprsSSF - gsmSCF interface

This interface is used by the gsmSCF to control a GPRS session or individual PDP Context in a certain gprsSSF. GPRS dialogues between the gprsSSF and the gsmSCF on this interface are opened as a result of the gprsSSF sending a request for instructions to the gsmSCF. A GPRS dialogue is composed of a sequence of TC dialogues linked together by the same reference. The GPRS dialogue handler allows the TC dialogue handling.

### 6.1.2.3 HLR – SGSN interface

This interface is used to send CAMEL related subscriber data to a visited GPRS network, e.g. GPRS-CSI.

## 6.2 Detection Points (DPs)

### 6.2.1 Definition and description

GPRS events may be made visible to the gsmSCF. The DPs are the points in association at which these events are detected. The DPs for GPRS Session and PDP Context are described in subclause 6.4.2 and subclause 6.4.3.

A DP can be armed in order to notify the gsmSCF that the GPRS event was encountered, and to allow the gsmSCF to influence subsequent handling of the GPRS Session, or the PDP Context. If the DP is not armed, the processing entity continues the processing without gsmSCF involvement at this DP.

Three different types of DPs are identified:

- Trigger Detection Point-Request (TDP-R): This detection point is statically armed and may initiate a CAMEL control relationship. This CAMEL control relationship is within a new GPRS dialogue. When the GPRS event is encountered and reported, processing is suspended.
- Event Detection Point- Request (EDP-R): This detection point is dynamically armed within the context of a CAMEL control relationship. When the GPRS event is encountered, and reported, processing is suspended and the gprsSSF waits for instructions from the gsmSCF.
- Event Detection Point-Notification (EDP-N): This detection point is dynamically armed within the context of a CAMEL control relationship. When the GPRS event is encountered and reported, processing is not suspended.

Arming/disarming mechanism:

A DP may be statically armed or dynamically armed. The following arming rules apply:

- DPs for GPRS Session and PDP Context are statically armed as a result of the GPRS-CSI analysis in the SGSN.
- DPs may be dynamically armed by the gsmSCF within the context of a CAMEL control relationship. In scenario 1 which is described in the subclause 6.4.4.1, PDP context related DPs may be armed as generic DP or as non-generic DP.

The following disarming rules apply:

- A statically armed DP is disarmed when the GPRS-CSI is withdrawn in the HLR. Only TDP-Rs can be disarmed using this mechanism.
- If the GPRS Session is released, then all EDPs related to the GPRS Session are disarmed.
- If a PDP context is released, then all non-generically armed EDPs related to that PDP context are disarmed.
- If a non-generically armed EDP is met, then EDPs for the GPRS Session or that PDP Context are disarmed, in accordance with the implicit disarming rule (see subclause 6.4.6).
- Armed EDPs may be explicitly disarmed by the gsmSCF by means of the Request Report BCSM Event information flow.

## 6.2.2 Relationship, DP processing rules and GPRS dialogue

A relationship between the State Models (in the gprsSSF) and the gsmSCF for the purpose of operator specific service processing is considered to be a CAMEL relationship. There are two types of CAMEL relationships: monitor relationship and control relationship.

- A CAMEL control relationship: the gsmSCF is able to influence the GPRS Session/PDP Context via the relationship for the given state model.
- A CAMEL monitor relationship: the gsmSCF is not able to influence the GPRS Session/PDP Context via the relationship for the given state model.

A control relationship persists as long as there is one or more EDP-R armed for this instance of the state model, or if the gprsSSF is in the state Waiting For Instruction for this instance of state model.

A control relationship changes to a monitor relationship if the conditions for a control relationship are no longer fulfilled and one or more EDP-N is armed or one or more Apply Charging Report GPRS is outstanding for this instance of the state model. If no EDP-Ns are armed and no Apply Charging Reports GPRS are outstanding for this instance of the state model, the relationship terminates.

A GPRS dialogue exists between gprsSSF and gsmSCF if at least one of the following conditions is fulfilled:

- There is at least one EDP armed,
- At least one report is pending,
- gprsSSF is in state Waiting\_For\_Instructions.

## 6.3 Description of CAMEL Subscriber Data

### 6.3.1 GPRS CAMEL Subscription Information (GPRS-CSI)

This subclause defines the contents of the GPRS CAMEL Subscription Information.

#### 6.3.1.1 gsmSCF Address

Address to be used to access the gsmSCF for a particular subscriber. The address shall be an E.164 number to be used for routing.

#### 6.3.1.2 Service Key

The Service Key identifies to the gsmSCF the service logic that shall apply.

#### 6.3.1.3 Default GPRS Handling

The Default GPRS Handling indicates whether the GPRS session or PDP context shall be released or continued as requested in case of error in the gprsSSF to gsmSCF dialogue.

#### 6.3.1.4 TDP List

The TDP List indicates on which detection point triggering shall take place.

#### 6.3.1.5 CAMEL Capability Handling

CAMEL Capability Handling indicates the phase of CAMEL which is asked by the gsmSCF for the service.

#### 6.3.1.6 CSI state

The CSI state indicates whether the GPRS-CSI is active or not.

### 6.3.1.7 Notification flag

The notification flag indicates whether the change of the GPRS-CSI shall trigger Notification on Change of Subscriber Data or not.

### 6.3.2 gsmSCF address list for CSI

The gsmSCF address list contains a list of gsmSCF addresses to which Notification on Change of Subscriber Data is to be sent. This list is common to all CSI.

## 6.4 Description of CAMEL State Models

GPRS can support multiple PDP contexts simultaneously for an attached subscriber, requiring the behaviour of a GPRS session to be modelled by two state models, one for the attach/detach procedures (GPRS Attach/Detach State Model) and the other for modelling individual PDP Contexts (GPRS PDP Context State Model).

### 6.4.1 General Handling

The GPRS State Model is used to describe the actions in an SGSN during processing of a GPRS session or PDP Contexts.

The GPRS State Model identifies the points in basic GPRS processing when Operator Specific Service (OSS) logic instances (accessed through the gsmSCF) are permitted to interact with basic GPRS control capabilities.

Figure 6.2 shows the components that have been identified to describe a GPRS State Model.

Figure 6.2: GPRS State Model Components

### 6.4.2 GPRS Attach/Detach State Model

The GPRS Attach/Detach State Model is used to model the behaviour of the GPRS attach/detach procedures.

When encountering a DP the Attach/Detach State Model processing is suspended at the DP and the SGSN indicates this to the gprsSSF which determines what action, if any, shall be taken in case the DP is armed.

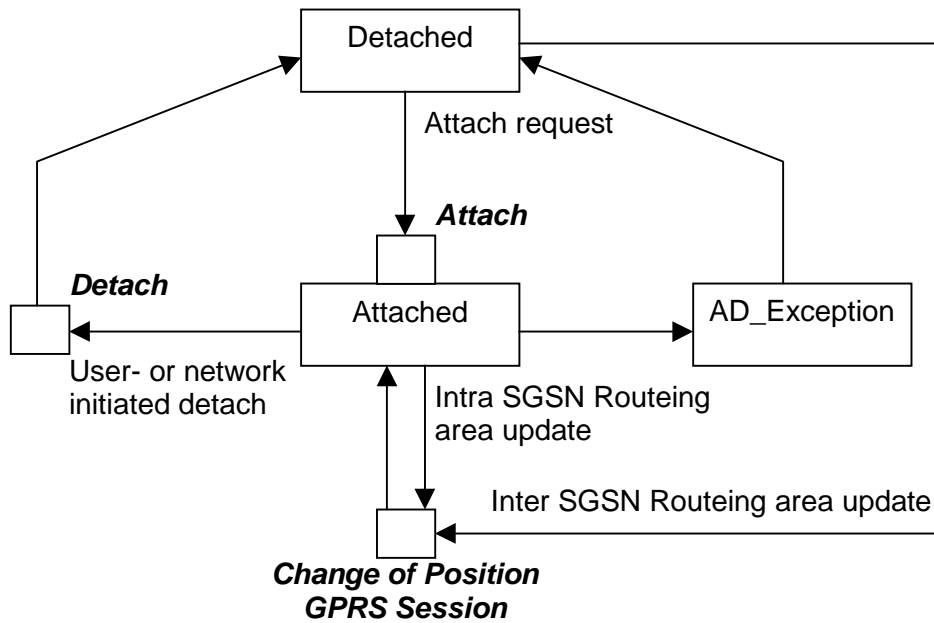

Figure 6.3: GPRS Attach/Detach State Model

Table 6.1: Description of GPRS Attach/Detach DPs in the SGSN

CAMEL Detection Point	DP Type	Description
DP Attach	TDP-R	A request to attach is received.
DP Change of Position GPRS Session	TDP-R <sup>1)</sup> , EDP-N	Routeing Area Update is accepted.
DP Detach	EDP-N, EDP-R	A detach request is received either from the MS, the SGSN or a 'Cancel Location' received from HLR or Inter SGSN Routeing update occurred in the old SGSN.
Note 1: Change of Position GPRS Session is reported as TDP-R in the case of Inter-SGSN Routeing Area Update (provided that this DP is statically armed in GPRS-CSI). Change of Position GPRS Session is reported as EDP-N in the case of Intra-SGSN Routeing Area Update (provided that this DP is dynamically armed by the Service Logic).		

### 6.4.2.1 Description of the Attach/Detach model (PIAs)

This subclause describes the model for the attach and detach a GPRS session in the SGSN. For each PIA a description can be found of the entry events, actions and exit events.

#### 6.4.2.1.1 Detached

Entry events:

- Detach (user or network initiated) and clearing of a previous GPRS session.
- Processing of exceptional conditions.

Actions:

- Interface is idled.
- Attach request is received from MS containing the IMSI/P-TMSI and the type of attach requested and, the identity of the MS is established (IMSI) (DP Attach), or Inter-SGSN Routeing Area Update Request is accepted (DP Change of Position GPRS Session).
- Information being analyzed, e.g. GPRS-CSI is analyzed.

Exit events:

- GPRS-CSI is analyzed (DP Attach or DP Change of Position GPRS Session).

#### 6.4.2.1.2 Attached

Entry events:

- GPRS-CSI is analyzed (DP Attach).

Actions:

- MM contexts are established at the MS and the SGSN.

Exit events:

- A GPRS Detach request is received from the MS or from the network (DP Detach).
- Intra-SGSN Routeing Area Update is accepted (DP Change of Position GPRS Session).
- An exception is encountered.

The GPRS Attach/Detach State Model shall only have one or more GPRS PDP Context State Models associated with it when in the Attached state. A GPRS PDP Context State Model cannot exist without its associated GPRS Attach/Detach State Model being in the Attached state. Closure of the GPRS Attach/Detach State Model via a detach will result in the idling of all associated GPRS PDP Context State Models and the release of the associated GPRS PDP Contexts.

It shall not be necessary to trigger a relationship from the GPRS Attach/Detach State Model to the gsmSCF in order for triggering to occur in an associated GPRS PDP Context State Model. However, in this latter case a GPRS Attach/Detach State Model shall still exist at the SGSN. This is so that CSE-initiated detach events sent within a given GPRS PDP Context relationship shall result in the GPRS Attach/Detach State Model transiting to the Detached state. As noted above, in this state no PDP Contexts can exist and so all associated GPRS PDP Context State Models will transit to state Idle.

### 6.4.3 GPRS PDP Context State Model

The GPRS PDP Context State Model is used to model the behaviour for the GPRS PDP Context procedures. There is one PDP Context State Model per GPRS PDP context.

When encountering a DP the PDP Context State Model processing is suspended at the DP and the SGSN indicates this to the gprsSSF which determines what action, if any, shall be taken in case the DP is armed.

Figure 6.4: GPRS PDP Context State Model

Table 6.2: Description of GPRS PDP Context DPs in the SGSN

CAMEL Detection Point	DP Type	Description
DP PDP Context Establishment	TDP-R <sup>1)</sup> , EDP-R, EDP-N	Activate PDP Context request is received from the MS.
DP PDP Context Establishment Acknowledgement	TDP-R <sup>2)</sup> , EDP-R, EDP-N	Create PDP Context response is received from the GGSN.
DP PDP Context Disconnection	EDP-N, EDP-R	Deactivate PDP Context Request is received from the MS, Delete PDP Context request is received from the GGSN. Inter SGSN Routeing update occurred in old SGSN.
DP Change of Position Context	TDP-R <sup>3)</sup> , EDP-N, EDP-R	Routeing Area Update is accepted.

NOTE 1: The PDP Context Establishment shall be reported as TDP-R (provided that this DP is statically armed in GPRS-CSI) if there is no relationship with the gsmSCF. If there is a relationship with the gsmSCF it shall be reported as EDP-R or EDP-N if armed so.

NOTE 2: The PDP Context Establishment Acknowledgement shall be reported as TDP-R (provided that this DP is statically armed in GPRS-CSI) if there is no relationship with gsmSCF. If there is a relationship with the gsmSCF, it shall be reported as EDP-R or EDP-N if armed so.

NOTE 3: Change of Position Context is reported as TDP-R in the case of Inter-SGSN Routeing Area Update (provided that this DP is statically armed in GPRS-CSI) if there is no relationship with the gsmSCF. Change of Position Context is reported as EDP-N or EDP-R in the case of Inter-SGSN Routeing Area Update (provided that this DP is armed as generic EDP) if there is a relationship with the gsmSCF. Change of Position Context is reported as EDP-N in the case of Intra-SGSN Routeing Area Update (provided that this DP is dynamically armed by the Service Logic).

6.4.3.1 Description of the PDP Context model (PIAs)

This subclause describes the model for PDP Context State Model in the SGSN. For each PIA a description can be found of the entry events, actions and exit events.

#### 6.4.3.1.1 Idle

Entry events:

- Deactivation (user or network initiated) and clearing of a previous PDP Context.
- Processing of exceptional conditions.

Actions:

- Interface is idled.
- Activate PDP Context request is received from MS (containing NSAPI, PDP Type, PDP Address, Access Point Name, QoS Requested, PDP Configuration Options), or Inter-SGSN Routeing Area Update is accepted (DP Change of Position Context).
- Information being analyzed, e.g. GPRS-CSI is analyzed.

Exit events:

- GPRS-CSI is analyzed (DP PDP Context Establishment or DP Change of Position Context, new SGSN).

#### 6.4.3.1.2 PDP Context Setup

Entry events:

- GPRS-CSI is analyzed (DP PDP Context Establishment).

Actions:

- APN and GGSN selection procedure is performed for a primary PDP context as specified in Annex A of 3GPP TS 23.060 [15]. APN and GGSN selection procedure is not performed for a secondary PDP context.
- Access Point Name is verified against the subscription. If the gsmSCF has provided an Access Point Name then the Access Point Name provided by the gsmSCF is checked against the subscription. For details refer to 3GPP TS 23.060 [15] Annex A.
- The SGSN ensures that an already active PDP context is not reactivated.
- GGSN address is derived from the Access Point Name by interrogation of a DNS. The Access Point Name consists of a Network Identifier and an Operator Identifier.
- Create PDP Context Request is sent to the GGSN.

Exit events:

- Create PDP Context Response is received from the GGSN (DP PDP Context Establishment Acknowledgement).
- An exception is encountered.

#### 6.4.3.1.3 PDP Context Established

Entry events:

- GPRS-CSI is analyzed (DP PDP Context Establishment Acknowledgement or DP Change of Position Context).

Actions:

- PDP context is established at the MS and the SGSN.

Exit events:

- Deactivation of the PDP Context is received from the MS or the GGSN, or is due to an inter SGSN routing area update (DP PDP Context Disconnection, old SGSN).
- Intra-SGSN Routeing Area Update Request is received from the MS (DP Change of Position Context).

- Inter-SGSN Routeing Area Update (DP Change of Position Context, new SGSN).
- An exception is encountered.

#### 6.4.3.1.4 Change of Position Context

Entry events:

- Inter SGSN Routing Area update accepted (new SGSN).
- Intra SGSN Routeing Area update request received from the MS.

Actions:

- PDP Context (containing NSAPI, PDP Type, PDP Address, Access Point Name, QoS Requested, PDP Configuration Options) is reestablished in case of Inter-SGSN Routeing Area update accepted (new SGSN).
- Intra SGSN Routeing Area updated.

Exit events:

- reestablishment of the PDP context at the new SGSN and return to PDP context established in case of inter SGSN Routeing Area update accepted in new SGSN (PIA PDP context established).
- Routeing Area update completed in case of intra SGSN Routeing Area update (PIA PDP context established).

### 6.4.4 GPRS CAMEL Scenarios

Two different scenarios are applicable for CAMEL control of GPRS.

#### **Scenario 1:**

Scenario 1 allows CAMEL control of the GPRS session and of multiple PDP contexts related to this session within a single GPRS dialogue.

#### **Scenario 2:**

Scenario 2 allows CAMEL control of single PDP contexts. Multiple PDP contexts are controlled in this scenario via multiple GPRS dialogues.

Scenario 1 and scenario 2 are mutually exclusive, i.e. it is not possible to use both for one GPRS session at the same time in one SGSN. A GPRS session is involved in GPRS CAMEL at one moment in time either by using scenario 1 or by using possible multiple instances of scenario 2. GPRS sessions in different SGSNs are independent from a CAMEL perspective.

#### 6.4.4.1 GPRS CAMEL Scenario 1

Scenario 1 allows CAMEL control of the GPRS session and of multiple PDP contexts related to this session within a single GPRS dialogue (Session dialogue).

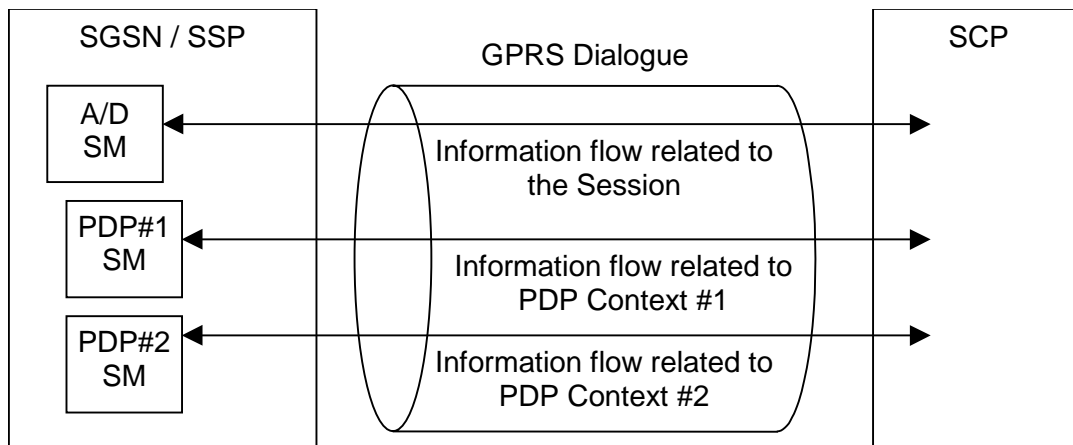

Figure 6.5: GPRS CAMEL Scenario 1

A GPRS dialogue in scenario 1 always consists of one GPRS Attach/Detach State Model and optionally of additional multiple GPRS PDP Context State Models related to the Attach/Detach State Model for the GPRS session. There is at most one GPRS Attach/Detach State Model per non idle GPRS session in one SGSN and at most one PDP Context State Model per active GPRS PDP context in one SGSN. The various PDP Context State Models are treated independently of each other.

The GPRS dialogue and the relationship between the GPRS Attach/Detach State Model and the gsmSCF are always initiated using the TDPs of the GPRS Attach/Detach State Model.

The gsmSCf requests further control or monitoring of individual GPRS PDP contexts using the Request Report GPRS Event information flow. To be informed about new individual PDP contexts the gsmSCF arms the DP 'PDP Context Establishment' or the DP 'PDP Context Establishment Acknowledgement' generically, i.e. without a PDP ID, as an EDP. To be informed about the handed over PDP contexts the gsmSCF arms the DP 'Change of Position Context' generically as an EDP-N or EDP-R.

Each GPRS PDP context is identified by a PDP ID. The PDP ID is assigned by the SGSN during PDP context establishment. The PDP ID is unique within one GPRS dialogue. The Request Report GPRS Event information flows to control new or handed over PDP contexts do not include a PDP ID. There is no 'PDP ID' related to the GPRS Attach/Detach State Model.

The PDP Id is reported to the gsmSCF in the first event notification for that PDP context.

#### 6.4.4.2 GPRS CAMEL Scenario 2

Scenario 2 allows CAMEL control of single PDP contexts. Multiple PDP contexts are controlled in this scenario via multiple GPRS dialogues (PDP Context dialogues).

Figure 6.6: GPRS CAMEL Scenario 2

A GPRS dialogue in scenario 2 consists of a single GPRS PDP Context State Model. There is no GPRS Attach/Detach State Model involved in this scenario. There is at most one PDP Context State Model per active GPRS PDP context in one SGSN.

There might be multiple GPRS dialogues in scenarios 2 for one GPRS session, each of the dialogues controlling a single GPRS PDP context. The various GPRS dialogues are independent of each other.

The GPRS dialogue and the relationship between the GPRS PDP Context State Model and the gsmSCF are always initiated using the TDPs for the GPRS PDP Context State Model.

Control of further individual GPRS PDP contexts in the same GPRS dialogue as in scenario 1 is not possible. There are no PDP IDs in this scenario.

## 6.4.5 SGSN Routeing Area Update

### 6.4.5.1 Intra-SGSN Routeing Area Update

Intra-SGSN Routeing Area Update will be detected via the DP 'Change of Position GPRS Session' for the session using the GPRS Attach/Detach State Model and via the DPs 'Change of Position Context' for the individual PDP contexts using the GPRS PDP Context State Models.

It will be reported via an EDP-N if the necessary EDP-N is armed.

### 6.4.5.2 Inter-SGSN Routeing Area Update

Inter-SGSN Routeing Area Update from the old SGSN to the new SGSN will be detected via the DP 'Change of Position GPRS Session' for the session using the GPRS Attach/Detach State Model and via the DPs 'Change of Position Context' using the GPRS PDP Context State Models for the individual PDP contexts which have been handed over.

Scenario 1:

Inter-SGSN Routeing Area Update from the old SGSN to the new SGSN will be detected in the new SGSN via the DP 'Change of Position GPRS Session' for the session using the GPRS Attach/Detach State Model and in the new SGSN via the DPs 'Change of Position Context' using the GPRS PDP Context State Models for the individual PDP contexts which have been handed over.

In this scenario the DP 'Change of Position GPRS Session' is armed as a TDP-R. If the Routeing Area Update is accepted the gprsSSF reports this TDP-R to the gsmSCF using the Initial DP GPRS information flow. To be informed about new PDP contexts the gsmSCF arms the DP 'PDP Context Establishment' or the DP 'PDP Context Establishment Acknowledgement' generically as EDP-R or EDP-N. The DPs 'Change of Position Context' for the PDP contexts which have been handed over will be reported with all necessary information to the gsmSCF when the gprsSSF is continued, i.e. it is no longer waiting for instructions. Contexts which are not continued in the new SGSN are not reported. The EDPs for new PDP contexts are reported as usual.

The Detach in the old SGSN is reported to the gsmSCF, provided this event is armed. All outstanding reports in the old SGSN are sent to the gsmSCF and all open CDRs are closed.

Scenario 2:

Inter-SGSN Routeing Area Update from the old SGSN to the new SGSN will be detected in the new SGSN via the DPs 'Change of Position Context' using the GPRS PDP Context State Models for the individual PDP contexts which have been handed over.

In this scenario the DP 'Change of Position Context' is armed as TDP-R. If the Routeing Area Update is accepted the gprsSSF reports these TDP-Rs PDP contexts which have been handed over to the gsmSCF using the Initial DP GPRS information flows in multiple GPRS dialogues.

The PDP Context Disconnection in the old SGSN is reported to the gsmSCF, provided this event is armed. All outstanding reports in the old SGSN are sent to the gsmSCF and the open CDR is closed.

## 6.4.6 Rules for Implicit Disarming of Detection Points

The two tables below give the rules for implicit disarming of event detection points.

Implicit EDP disarming rules are specified for the Attach/Detach State Model and PDP Context State Model. The tables specify which EDP's shall be disarmed (i.e. MonitorMode set to Transparent) if/when each EDP is encountered, irrespective of the EDP's MonitorMode (Transparent, NotifyAndContinue, or Request).

EDPs which are armed generically for GPRS PDP Context State Models shall only be implicitly disarmed at the end of the GPRS dialogue. Explicit disarming is possible.

When EDP's are armed with MonitorMode 'Request' (EDP-Rs) are encountered, any implicit EDP disarming shall take place before reporting the EDP and transiting the gprsSSF to the WFI state (if not already suspended in the WFI state).

The table entry 'X' means that if one DP occurs (independently of arming and reporting to the gsmSCF) the marked one is implicitly disarmed. It shall be possible to rearm explicitly an implicitly disarmed DP.

**Table 6.3: Implicit disarming rules for Scenario 1 (the rules apply for non-generically armed DPs)**

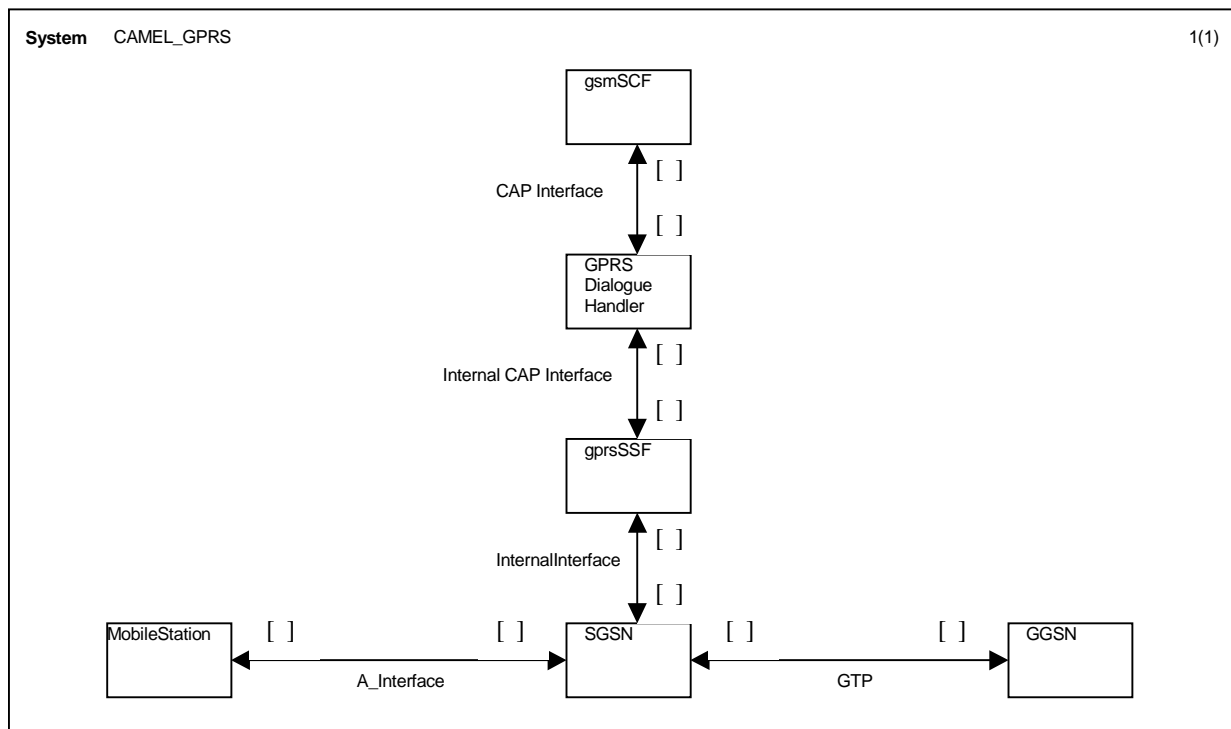

Encountered DP	Implicit disarmed DPs					
	Change of Position GPRS Session	Change of Position Context	Detach	PDP Context Establishment	PDP Context Establishment Acknowledgement	PDP Context Disconnection
Change of Position GPRS Session						
Change of Position Context						
Detach	X	X	X	X	X	X
PDP Context Establishment						
PDP Context Establishment Acknowledgement					X	
PDP Context Disconnection		X			X	X

**Table 6.4: Implicit disarming rules for Scenario 2 (the rules apply for non-generically armed DPs)**

Encountered DP	Implicit disarmed DPs		
	Change of Position Context	PDP Context Establishment Acknowledgement	PDP Context Disconnection
PDP Context Establishment Acknowledgement		X	
PDP Context Disconnection	X	X	X
Change of Position Context			

## 6.5 Procedures for CAMEL GPRS

### 6.5.1 Overall SDL Architecture

**Figure 6.7: Architecture for CAMEL/GPRS interworking**

### 6.5.2 Handling GPRS in the SGSN

The functional behaviour of the SGSN is specified in 3GPP TS 23.060 [15]. The procedures specific to CAMEL are specified in this subclause:

- Procedure CAMEL\_GPRS\_Attach;
- Procedure CAMEL\_GPRS\_Detach;
- Procedure CAMEL\_GPRS\_Routeing\_Area\_Update\_Session;
- Procedure CAMEL\_GPRS\_Routeing\_Area\_Update\_Context;
- Procedure CAMEL\_GPRS\_PDP\_Context\_Establishment;
- Procedure CAMEL\_GPRS\_Create\_PDP\_Context\_Establishment\_Acknowledgement;
- Procedure CAMEL\_GPRS\_Change\_Of\_QoS;
- Procedure CAMEL\_GPRS\_PDP\_Context\_Disconnection.

#### 6.5.2.1 Actions of the SGSN on receipt of Int\_Error

The SGSN checks the default GPRS Handling parameter in GPRS-CSI.

If the default GPRS handling is release, a Detach indication is sent to the MS. The SGSN then releases all resources and the invoked CAMEL procedure ends.

If the default GPRS handling is continue, the SGSN continues processing without CAMEL support.

### 6.5.2.2 Actions of the SGSN on receipt of Int\_Continue

The SGSN continues processing without any modification of GPRS parameters.

### 6.5.2.3 Handling of GPRS Attach/Detach

## 6.5.3 Handling GPRS in the gprsSSF

### 6.5.3.1 Process GPRS\_SSF

A relationship exists between the gsmSCF and the Attach/Detach State Model and/or between the gsmSCF and every PDP Context State Model. The relationship may be in controlling or monitoring mode. When a Continue GPRS, Connect GPRS or Request Report GPRS Event information flow is received, then the relationship between the gsmSCF and the Attach/Detach State Model, and between the gsmSCF and a PDP Context State Model may be downgraded from controlling to monitoring.

When Tssf expires, the CAMEL procedures that are waiting for an instruction from the gsmSCF shall receive an Int\_Error signal. The Default GPRS Handling parameter determines the subsequent action of those CAMEL procedures.

If the Default GPRS Handling parameter is set to 'Release', then:

- if the GPRS Dialogue is controlling a GPRS Session, then the gprsSSF shall release the entire GPRS Session;
- if the GPRS Dialogue is controlling a single PDP Context, then the gprsSSF shall release the PDP Context.

The task box 'Open GPRS Dialogue' comprises all the tasks that are required for starting a GPRS dialogue. This includes, amongst others, the allocation of a GPRS Reference Number and the allocation of resources. The task box 'Terminate GPRS Dialogue' comprises all the tasks that are required for closing a GPRS dialogue.

### 6.5.3.2 Process GPRS\_Dialogue\_Handler

When process gprsSSF sends a TC\_End request primitive to process GPRS\_Dialogue\_Handler, then the corresponding TC\_End TC Message shall be sent to the gsmSCF only when the following conditions have been fulfilled:

- The gprsSSF has processed all information flows that the gprsSSF has received from the gsmSCF.
- No information flows remain to be sent from the gprsSSF to the gsmSCF.
- The gprsSSF is not waiting for a Result or Error component for any information flows that the gprsSSF has sent to the gsmSCF.

### 6.5.3.3 Procedure Handle\_AC\_GPRS

Procedure Handle\_AC\_GPRS is called from process gprsSSF with the following input parameters:

- 'Session'. The Apply Charging GPRS procedure shall be executed for the Session
- 'PDP Id'. The Apply Charging GPRS procedure shall be executed for the indicated PDP Context.

### 6.5.3.4 Procedure Handle\_ACR\_GPRS

Procedure Handle\_ACR\_GPRS is called from process gprsSSF with the following input parameters:

- 'Session'. The Apply Charging Report GPRS procedure shall be executed for the Session. This procedure checks if a Session Period report is pending and if so, sends this report to the gsmSCF.
- 'PDP Id'. The Apply Charging Report GPRS procedure shall be executed for the indicated PDP Context. This procedure checks if a Context Volume report is pending and if so, sends this report to the gsmSCF. The procedure then checks if a Context Period is pending and if so, sends this report to the gsmSCF.
- 'Session + PDPs'. The Apply Charging Report GPRS procedure shall be executed for the Session and all PDP Contexts. The sequence of checking the reports shall be as follows:
  - 1) The procedure checks the pending Volume and Period reports for each PDP Context.
  - 2) The procedure then checks the pending Period report for the Session.

When a PDP Context Volume counter or PDP context Period timer expires, then the procedure Apply Charging Report GPRS procedure is called with the PDP Id as input parameter. The procedure will then check both reports for that PDP Context.

### 6.5.3.5 Procedure Complete\_FCI\_Record\_GPRS

Procedure Complete\_FCI\_Record\_GPRS is called from process gprsSSF with the following input parameters:

- 'Session'. The Complete\_FCI\_Record\_GPRS procedure shall be executed for the Session.
- 'PDP Id'. The Complete\_FCI\_Record\_GPRS procedure shall be executed for the indicated PDP Context.
- 'Session + PDPs'. The Complete\_FCI\_Record\_GPRS procedure shall be executed for the Session and all PDP Contexts.

### 6.5.3.6 Procedure Handle\_SCI\_GPRS

For terminology see subclause 4.5.7.2.1.

The gsmSCF may send e-parameters to the Session and to individual PDP Contexts.

When e-parameters are sent for the Session, the SGSN will forward these e-parameters directly to the Mobile Station.

When e-parameters are sent for a PDP Context and that PDP Context is not yet acknowledged (= active), then the SGSN shall retain these parameters (pending parameters). These parameters will be sent to the Mobile Station when the PDP Context is acknowledged.

The gsmSCF may send two sets of e-parameters and a Tariff Switch for the Session or a PDP Context. The first set of e-parameters shall be sent to the SGSN and the second set of e-parameters shall be stored. This second set of e-parameters shall be sent to the SGSN when the tariff switch expires.

When the Tariff Switch for the Session expires, then the stored e-parameters for the Session shall be sent to the SGSN.

When the Tariff Switch for a PDP Context expires before that PDP Context is acknowledged, then the pending e-parameters for that PDP Context shall be replaced by the stored e-parameters for that PDP Context.

The stored e-parameters for that PDP Context shall be discarded.

When the Tariff Switch for a PDP Context expires after that PDP Context has been acknowledged, then the stored e-parameters for that PDP Context shall be sent to the SGSN.

#### 6.5.3.6.1 Handling of SCI\_GPRS for the Session

1) Precondition: no Tsw running for the Session:

if 1 set of e-parameters received --> send e-parameters to the SGSN;

if 2 sets of e-parameters received --> error;

if 1 set of e-parameters and Tariff Switch received --> error;

if 2 sets of e-parameters and Tariff Switch received --> send 1<sup>st</sup> set of e-parameters to the SGSN/start Tsw (Session)/store 2<sup>nd</sup> set of e-parameters.

2) Precondition: Tsw running for the Session and no e-parameters stored for the Session:

if 1 set of e-parameters received --> error;

if 2 sets of e-parameters received --> send 1<sup>st</sup> set of e-parameters to the SGSN/store 2<sup>nd</sup> set of e-parameters;

if 1 set of e-parameters and Tariff Switch received --> error;

if 2 sets of e-parameters and Tariff Switch received --> error.

3) Precondition: Tsw running for the Session and e-parameters stored for the Session:

- if 1 set of e-parameters received --> error;
- if 2 sets of e-parameters received --> error;
- if 1 set of e-parameters and Tariff Switch received --> error;
- if 2 sets of e-parameters and Tariff Switch received --> error.

#### 6.5.3.6.2 Handling of SCI\_GPRS for a PDP Context

- 1) Precondition: before a PDP Context Establishment Acknowledgement event is detected and no Tsw running for this PDP Context:
  - if 1 set of e-parameters received --> send e-parameters to the SGSN;
  - if 2 sets of e-parameters received --> error;
  - if 1 set of e-parameters and Tariff Switch received --> error;
  - if 2 sets of e-parameters and Tariff Switch received --> send 1<sup>st</sup> set of e-parameters to the SGSN/start Tsw(PDP Id)/store 2<sup>nd</sup> set of e-parameters;
- 2) Precondition: before a PDP Context Establishment Acknowledgement event is detected and Tsw running for this PDP Context and no e-parameters stored for this PDP Context:
  - if 1 set of e-parameters received --> error;
  - if 2 sets of e-parameters received --> send 1<sup>st</sup> set of e-parameters to the SGSN/store 2<sup>nd</sup> set of e-parameters;
  - if 1 set of e-parameters and Tariff Switch received --> error;
  - if 2 sets of e-parameters and Tariff Switch received --> error.
- 3) Precondition: before a PDP Context Establishment Acknowledgement event is detected and Tsw running for this PDP Context and e-parameters stored for this PDP Context:
  - if 1 set of e-parameters received --> error;
  - if 2 sets of e-parameters received --> error;
  - if 1 set of e-parameters and Tariff Switch received --> error;
  - if 2 sets of e-parameters and Tariff Switch received --> error.
- 4) Precondition: after a PDP Context Establishment Acknowledgement event is detected and no Tsw running for this PDP Context:
  - if 1 set of e-parameters received --> send e-parameters to the SGSN;
  - if 2 sets of e-parameters received --> error;
  - if 1 set of e-parameters and Tariff Switch received --> start Tsw(PDP Id)/store e-parameters;
  - if 2 sets of e-parameters and Tariff Switch received --> send 1<sup>st</sup> set of e-parameters to the SGSN/start Tsw(PDP Id)/store 2<sup>nd</sup> set of e-parameters.
- 5) Precondition: after a PDP Context Establishment Acknowledgement event is detected and Tsw running for this PDP Context and no e-parameters stored for this PDP Context:
  - if 1 set of e-parameters received --> store e-parameters;
  - if 2 sets of e-parameters received --> send 1<sup>st</sup> set of e-parameters to the SGSN/store 2<sup>nd</sup> set of e-parameters;
  - if 1 set of e-parameters and Tariff Switch received --> error;
  - if 2 sets of e-parameters and Tariff Switch received --> error.

6) Precondition: after a PDP Context Establishment Acknowledgement event is detected and Tsw running for this PDP Context and e-parameters stored for this PDP Context:

- if 1 set of e-parameters received --> error;
- if 2 sets of e-parameters received --> error;
- if 1 set of e-parameters and Tariff Switch received --> error;
- if 2 sets of e-parameters and Tariff Switch received --> error.

### 6.5.3.7 Procedure Handle\_PDP\_Acknowledgement

Procedure Handle\_PDP\_Acknowledgement is called when an event occurs that may signal the activation (= Acknowledgement) of a PDP Context. The event signal is passed on to the Handle\_PDP\_Acknowledgement procedure.

### 6.5.3.8 GPRS duration and volume control

#### 6.5.3.8.1 Examples of information flows for GPRS session and PDP context control

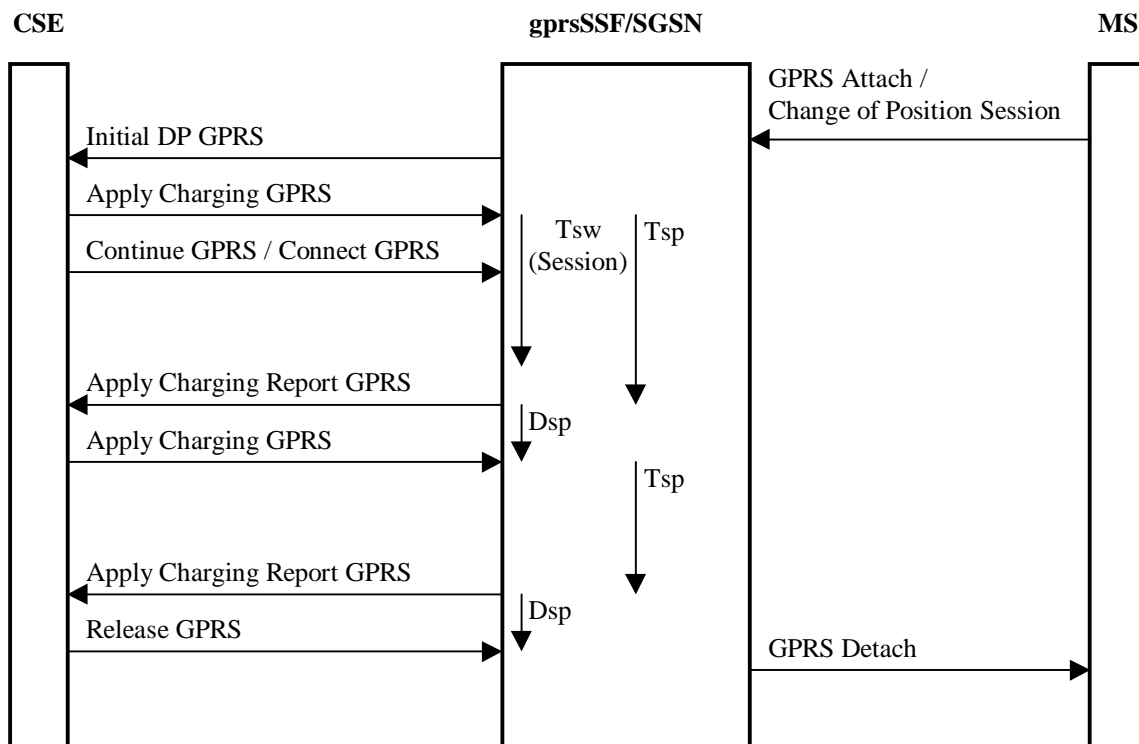

Figure 6.16a: Example of information flows for GPRS session duration at GPRS attach and change of position session

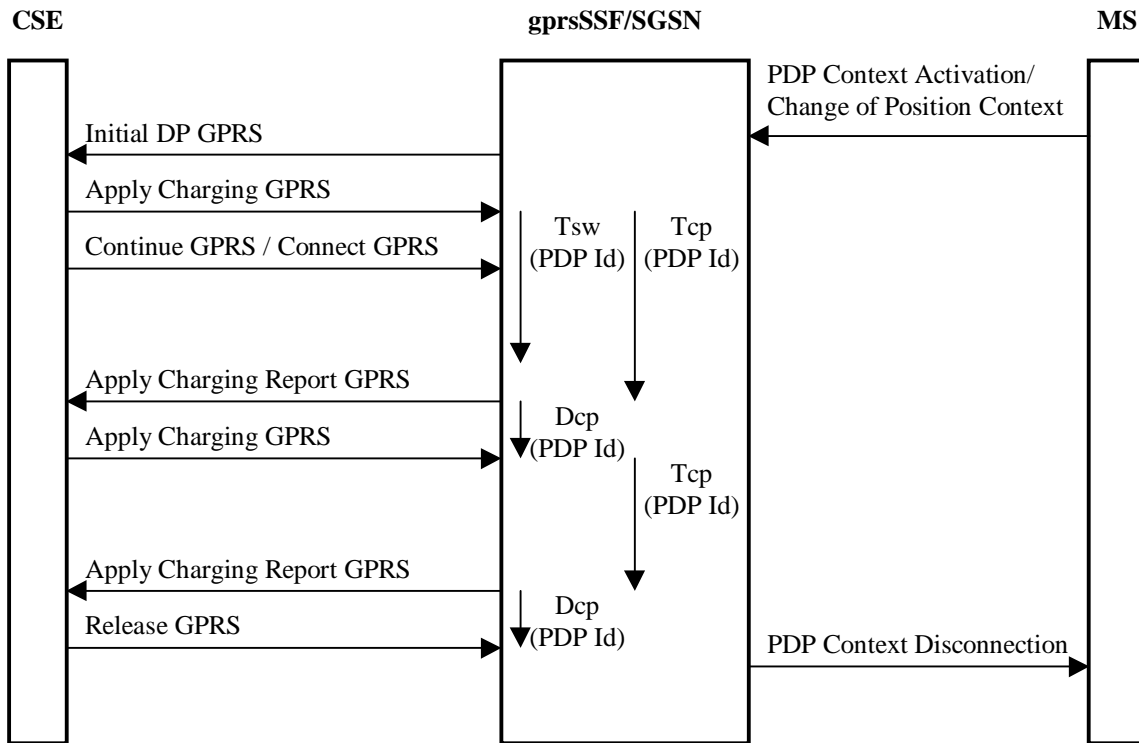

Figure 6.16b: Example of information flows for PDP context duration control at context activation and change of position context

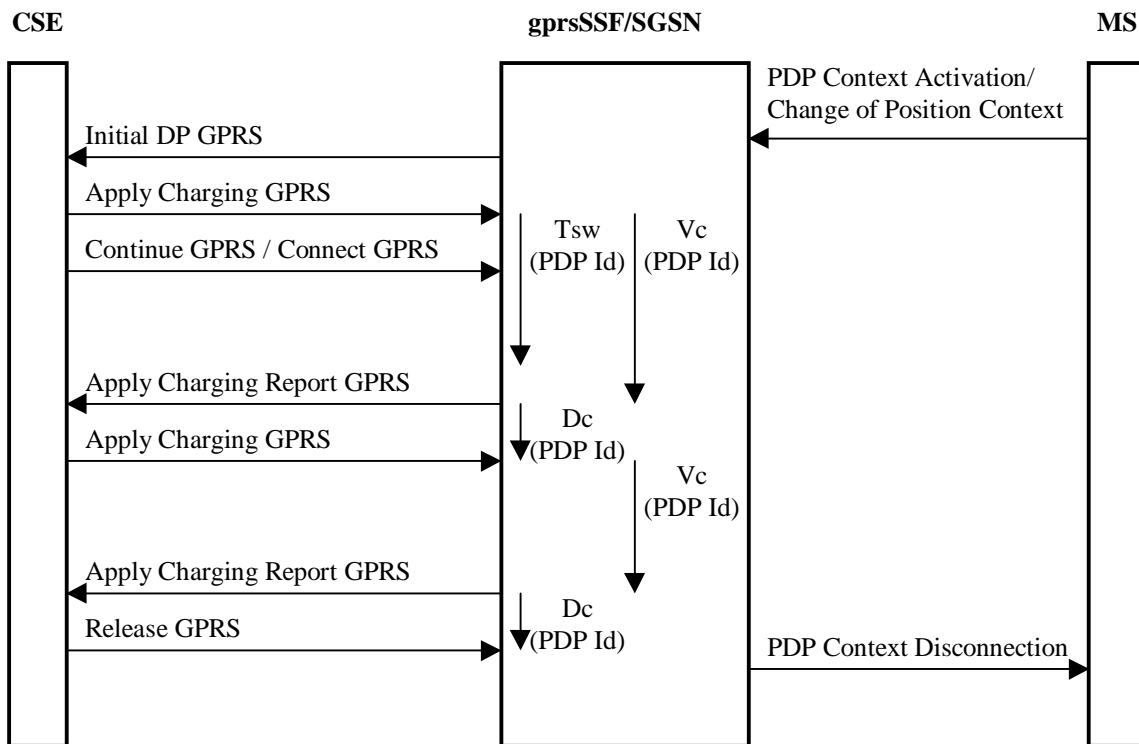

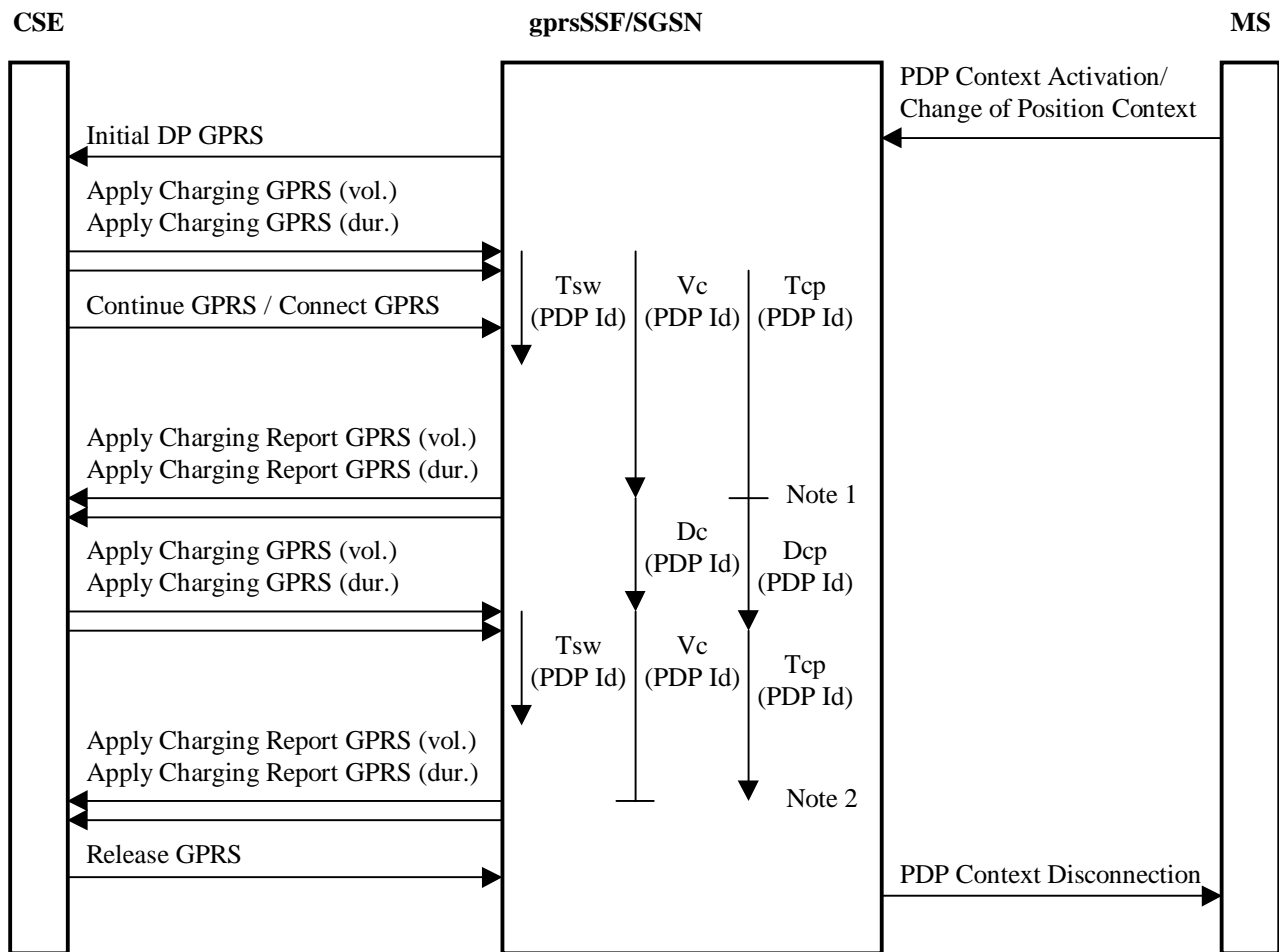

Figure 6.16c: Example of information flows for PDP context volume control at context activation and change of position context

Note1: Vc threshold reached, Tcp is stopped.

Note2: Tcp time out, Vc is stopped.

**Figure 6.16d: Example of information flows for PDP context volume and duration control at context activation and change of position context**

These figures 6.16a to 6.16d show examples of handling of the timers that are used in the process gprsSSF and in the procedures Handle\_AC\_GPRS and Handle\_ACR\_GPRS.

Duration timers (Tsp for the GPRS session and one Tcp for each PDP context) are used if the charging is on duration of the GPRS session or a PDP context.

Tariff Switch Timers (Tsw(Session) for the GPRS session and one Tsw(PDP Id) for each PDP context) define the start point of a new Tariff. Tsw(Session) is used for charging on duration. Tsw(PDP Id) is used for both methods of charging: duration charging and volume charging. If a PDP context is charged on duration and volume, only one Tsw(PDP Id) timer will be accepted from the gsmSCF for that PDP context.

Delta timers measure the response time of the gsmSCF after an Apply Charging Report GPRS information flow:

- Dsp for the GPRS session; this delta timer is used for GPRS session period timing.
- Dcp for each PDP context; these delta timers are used for PDP context period timing.
- Dc for each PDP context; these delta counters are used for PDP context volume counting.

After the sending of Apply Charging Report GPRS, the gsmSCF may reply either with:

- Apply Charging GPRS, if the gsmSCF sends a new duration because of the expiration of the previous period or because of QOS change.
- Release GPRS, if the gsmSCF decides to release the GPRS session or PDP context.

## 6.5.3.8.2 TC guard timer

### 6.5.3.8.2.1 General

When the gprsSSF sends an Apply Charging Report GPRS information flow to the gsmSCF, with SessionActive or ContextActive variable set to TRUE, then the gprsSSF shall start the TC guard timer. The gprsSSF shall also mark for the Session or PDP Context for which the Apply Charging Report GPRS was sent, that a corresponding Apply Charging GPRS information flow from the gsmSCF is expected.

When the gprsSSF receives an Apply Charging GPRS information flow or a Release GPRS information flow, then the 'Waiting-for-AC' marking(s) for the Session or PDP Context shall be removed. The gprsSSF shall then check if the TC guard timer shall be stopped (task box 'Check TC guard timer'). The TC guard timer shall be stopped if there are no more Apply Charging GPRS information flows expected for the Session and all PDP Contexts.

When an event occurs that results in the termination of a PDP Context, then the 'Waiting-for-AC' markings for that PDP Context shall be removed. The gprsSSF shall then check if the TC guard timer shall be stopped (task box 'Check TC guard timer'). The TC guard timer shall be stopped if there are no more Apply Charging GPRS information flows expected for the Session and all PDP Contexts.

When the TC guard timer expires in state Monitoring, then the gprsSSF shall close the TC dialogue, provided that all conditions for closing the TC dialogue are fulfilled, i.e. there are no information flow results expected from the gsmSCF, no information flows or errors to be sent to the gsmSCF and no information flows from the gsmSCF received and waiting to be processed.

When the TC guard timer expires in state Waiting\_for\_Instructions, then no action shall be taken.

Service Designers should note that there may be additional timer(s) in the gprsSSF to supervise the response from the gsmSCF on the Apply Charging Report GPRS procedure. As a result of this, if the gsmSCF does not send an Apply Charging GPRS, Release GPRS or Cancel GPRS in response to an Apply Charging Report GPRS when the gprsSSF is awaiting such response, then service behaviour may be unpredictable.

### 6.5.3.8.2.2 Check TC guard timer

This clause describes the actions to be taken in the task box 'Check TC guard timer'.

The tasks to be executed in the 'Check TC guard timer' box depend on the event that resulted in execution of the task box.

#### 6.5.3.8.2.2.1 Apply Charging GPRS

If 'Check guard timer' is executed as a result of an Apply Charging GPRS information flow from the gsmSCF, then the appropriate 'Waiting-for-AC' marker shall be removed, depending on the information received in the Apply Charging GPRS information flow:

- if the Apply Charging GPRS information flow carries a Session Time threshold, then the Session-Period 'Waiting-for-AC' marker shall be removed.
- if the Apply Charging GPRS information flow carries a PDP Context Volume threshold, then the PDP Context-Volume 'Waiting-for-AC' marker shall be removed.
- if the Apply Charging GPRS information flow carries a PDP Context Time threshold, then the PDP Context - Period 'Waiting-for-AC' marker shall be removed.

The gprsSSF then checks if there is any 'Waiting-for-AC' marker for the Session or any PDP Context. If there is no 'Waiting-for-AC' marker remaining, then the TC guard timer shall be stopped.

#### 6.5.3.8.2.2.2 Release GPRS

If 'Check TC guard timer' is executed as a result of a Release GPRS information flow from the gsmSCF, then the appropriate 'Waiting-for-AC' markers shall be removed, depending on the information received in the Release GPRS information flow:

- if the Release GPRS information flow is for the Session, then the Session 'Waiting-for-AC' markers shall be removed.

- if the Release GPRS information flow is for the PDP Context, then the PDP Context 'Waiting-for-AC' markers shall be removed.

The gprsSSF then checks if there is any 'Waiting-for-AC' marker for the Session or any PDP Context. If there is no 'Waiting-for-AC' marker remaining, then the TC guard timer shall be stopped.

#### 6.5.3.8.2.2.3 PDP Context Disconnect

If 'Check TC guard timer' is executed as a result of a PDP Context Disconnect signal from the SGSN, then the 'Waiting-for-AC' markers for that PDP Context shall be removed.

The gprsSSF then checks if there is any 'Waiting-for-AC' marker for the Session or any PDP Context. If there is no 'Waiting-for-AC' marker remaining, then the TC guard timer shall be stopped.

## 6.6 Description of information flows

This subclause contains the detailed description of the information flows used by CAMEL for GPRS control.

Each Information Element (IE) is marked as Mandatory (M), Conditional (C), Specific conditions (S) or Optional (O).

An 'M' IE shall always be included. A 'C' IE shall be included if the sending entity has the necessary information to populate the IE. The conditions for the inclusion of an 'S' IE are shown in the 'Description' column of the definition table. An 'O' IE may be included or omitted as required by the service logic. This categorization is a functional classification, i.e. it defines the requirements for the stage 2 information. It is not a stage 3 classification to be used for the ASN.1 syntax of the protocol.

Details of errors and exceptions to these rules are specified in 3GPP TS 29.002 [32] and TS 29.078 [33].

### 6.6.1 gprsSSF to gsmSCF Information Flows

#### 6.6.1.1 Activity Test GPRS ack

##### 6.6.1.1.1 Description

This IF is the response to the Activity Test GPRS.

##### 6.6.1.1.2 Information Elements

This IF contains no information elements.

#### 6.6.1.2 Apply Charging Report GPRS

##### 6.6.1.2.1 Description

This IF is used by the gprsSSF to report to the gsmSCF the information requested in the Apply Charging GPRS IF. In addition, this IF is used to notify the gsmSCF of changes in QoS. Note that there are several possible QoS profiles defined by the combinations of the different QoS attributes as defined in 3GPP TS 23.060 [15]. A PLMN may only support and charge on a limited subset of those QoS. It is recommended that changes in QoS are only reported in Apply Charging Report GPRS for those QoS profiles.

##### 6.6.1.2.2 Information Elements

Information element name	Status	Description
Gprs Reference Number	C	This IE consists of a number assigned by the gprsSSF and a number assigned by the gsmSCF. It is used for TCAP dialogue segmentation. Refer to 3GPP TS 29.078 [33] for the usage of this element.
Charging Result	M	This IE contains the charging information for the PDP provided by the gprsSSF. It is a choice between elapsed time and data volume.
Quality Of Service	C	This IE is described in a table below.
Active	M	This IE indicates if the GPRS session or PDP context is still established, or if it has been detached or deactivated.
PDP ID	C	This IE identifies the PDP Context to which the IF applies.  Scenario 1: If this IE is not present in the IF, then the Apply Charging Report GPRS applies to the GPRS Session. If this IE is present in the IF, then the Apply Charging Report GPRS applies to the indicated PDP Context.  Scenario 2: This IE is not used in the IF.
Charging Roll Over	C	This IE indicates which parameter(s) of the Charging Result have overflowed. Refer to 3GPP TS 29.078 [33] for the usage of this element.

Quality of Service contains the following information element:

Information element name	Status	Description
Negotiated QoS	C	This IE identifies the QoS which was negotiated between the user, the SGSN and the GGSN, as a result of a 'Modify PDP Context' request. This IE shall be included only if sending of the Apply Charging Report GPRS was triggered by a change in Quality of Service.

### 6.6.1.3 Entity Released GPRS

#### 6.6.1.3.1 Description

This IF is used by the gprsSSF to inform the gsmSCF at any phase that a GPRS Session has been detached or a PDP Context has been disconnected without reporting any EDP.

#### 6.6.1.3.2 Information Elements

Information element name	Status	Description
Gprs Reference Number	C	This IE consists of a number assigned by the gprsSSF and a number assigned by the gsmSCF. It is used for TCAP dialogue segmentation. Refer to 3GPP TS 29.078 [33] for the usage of this element.
GPRS Cause	M	This IE contains the Cause value indicating the reason for the GPRS Session Detach event or the PDP Context Disconnection event.
PDP ID	C	This IE identifies the PDP Context to which the IF applies.  Scenario 1: If this IE is not present in the IF, then the Entity Released GPRS applies to the GPRS Session. If this IE is present in the IF, then the Entity Released GPRS applies to the indicated PDP Context. Scenario 2: This IE is not used in the IF.

### 6.6.1.4 Event Report GPRS

#### 6.6.1.4.1 Description

This IF is used to notify the gsmSCF of a GPRS event previously requested by the gsmSCF in a Request Report GPRS Event IF.

#### 6.6.1.4.2 Information Elements

Information element name	Status	Description
Gprs Reference Number	C	This IE consists of a number assigned by the gprsSSF and a number assigned by the gsmSCF. It is used for TCAP dialogue segmentation. Refer to 3GPP TS 29.078 [33] for the usage of this element.
GPRS Event Type	M	This IE specifies the type of event that is reported.
Misc GPRS Info	M	This IE indicates the DP type (EDP-N or EDP-R).
GPRS Event Specific Information	M	This IE is described in a table below. This IE contains information specific to the reported event.
PDP ID	C	This IE identifies the PDP Context to which the IF applies.  Scenario 1: If this IE is not present in the IF, then the Event Report GPRS applies to the GPRS Session. If this IE is present in the IF, then the Event Report GPRS applies to the indicated PDP Context. Scenario 2: This IE is not used in the IF.

If the *GPRS Event Type* contains DP Change of Position GPRS Session, then the GPRS Event Specific Information IE contains the following information elements:

Information element name	Status	Description
Location Information In SGSN	M	See subclause 7.6.1.2.2.

If the *GPRS Event Type* contains DP Change of Position Context, then the GPRS Event Specific Information IE contains the following information elements:

Information element name	Status	Description
Access Point Name	S	This IE identifies the Access Point Name to which the MS is connected. It shall be present, if available, at inter-SGSN routing area update. It shall be absent at intra-SGSN routing area update.
Charging ID	S	This IE contains the Charging ID received from the GGSN for the PDP context. It shall be present, if available, at inter-SGSN routing area update. It shall be absent at intra-SGSN routing area update.
Location Information In SGSN	M	See subclause 7.6.1.2.2.
End User Address	S	See subclause 6.6.1.5.2. It shall be present, if available, at inter-SGSN routing area update. It shall be absent at intra-SGSN routing area update.
Quality Of Service	S	This IE is described in a table below. It shall be present, if available, at inter-SGSN routing area update. It shall be absent at intra-SGSN routing area update.
Time And Time Zone	S	This IE contains the time that the gprsSSF met the detection point, and the time zone the gprsSSF resides in. It shall be present, if available, at inter-SGSN routing area update. It shall be absent at intra-SGSN routing area update.
GGSN Address	S	This IE contains the GGSN address for control plane to which the MS is connected, see 3GPP TS 23.003 [7]. It shall be present, if available, at inter-SGSN routing area update. It shall be absent at intra-SGSN routing area update.

If the *GPRS Event Type* contains DP Detach or DP PDP context disconnection, then the GPRS Event Specific Information IE contains the following information elements:

Information element name	Status	Description
Initiating Entity	M	This IE identifies the entity that has initiated the disconnection or detachment.
Routeing Area Update	C	This IE indicates that the Detach or Disconnection is due to inter-SGSN routeing area update.

If the *GPRS Event Type* contains DP PDP context establishment, then the GPRS Event Specific Information IE contains the following information elements:

Information element name	Status	Description
Access Point Name	C	This IE identifies the Access Point Name the MS has requested to connect to.
End User Address	C	See subclause 6.6.1.5.2.
Quality Of Service	M	This IE is described in a table below.
Location Information In SGSN	M	See subclause 7.6.1.2.2.
Time And Time Zone	M	This IE contains the time that the gprsSSF met the detection point, and the time zone the gprsSSF resides in.
PDP Initiation Type	M	This IE indicates whether a PDP context was established as a result of a network-initiated request or as a result of a subscriber request.
Secondary PDP Context	C	This IE indicates that the PDP context activation was requested for a secondary PDP context. See 3GPP TS 23.060 [15].

If the *GPRS Event Type* contains DP PDP context establishment acknowledgement, then the GPRS Event Specific Information IE contains the following information elements:

Information element name	Status	Description
Access Point Name	M	This IE identifies the Access Point Name to which the MS is connected.
Charging ID	M	This IE contains the Charging ID received from the GGSN for the PDP context.
End User Address	M	See subclause 6.6.1.5.2.
Quality Of Service	M	This IE is described in a table below.
Location Information In SGSN	M	See subclause 7.6.1.2.2.
Time And Time Zone	M	This IE contains the time that the gprsSSF met the detection point, and the time zone the gprsSSF resides in.
GGSN Address	M	This IE contains the GGSN address for control plane to which the MS is connected, see 3GPP TS 23.003 [7].

Quality of Service contains the following information elements:

Information element name	Status	Description
Requested QoS	C	This IE identifies the QoS requested by the subscriber for the PDP Context. It shall be included if the EventReportGPRS is sent at PDP Context Establishment, at PDP Context Establishment Acknowledgement and at Change of Position Context.
Subscribed QoS	C	This IE identifies the subscribed QoS. It shall be included if the EventReportGPRS is sent at PDP Context Establishment, at PDP Context Establishment Acknowledgement and at Change of Position Context.
Negotiated QoS	C	This IE identifies the QoS which was negotiated between the user, the SGSN and the GGSN. It shall be included if the EventReportGPRS is sent at PDP Context Establishment Acknowledgement and at Change of Position Context.

## 6.6.1.5 Initial DP GPRS

### 6.6.1.5.1 Description

This IF is generated by the gprsSSF when a trigger is detected at a DP in the GPRS state models, to request instructions from the gsmSCF.

## 6.6.1.5.2 Information Elements

Information element name	Status	Description
Gprs Reference Number	M	This IE consists of a number assigned by the gprsSSF. It is used for TCAP dialogue segmentation. Refer to 3GPP TS 29.078 [33] for the usage of this element.
ServiceKey	M	This IE indicates to the gsmSCF the requested CAMEL Service. It is used to address the required application/SLP within the gsmSCF.
GPRS Event Type	M	This IE indicates the armed GPRS DP event resulting in the Initial DP IF.
MSISDN	M	This IE contains the basic MSISDN of the MS.
IMSI	M	This IE identifies the mobile subscriber.
Time and Time zone	M	This IE contains the time that the gprsSSF was triggered, and the time zone in which the gprsSSF resides.
GPRS MS Class	C	This IE contains the MS network and radio access capabilities.
End User Address	C	This IE is described in a table below.
Quality of Service	C	This IE is described in a table below.
Access Point Name	C	This IE identifies the Access Point Name: - At DP Change Of Position Context contains the selected APN. - AT DP PDP Context Establishment contains the APN which the MS has requested. - AT DP PDP Context Establishment Acknowledgement contains the selected APN.
Charging ID	C	This IE contains the Charging ID received from the GGSN for the PDP context.
SGSN Capabilities	C	This IE specifies the capabilities of the SGSN to support the CAMEL interworking, e.g. support of Advice of Charge.
Location Information in SGSN	M	This IE is described in subclause 7.6.1.2.2.
PDP Initiation Type	C	This IE indicates whether a PDP context was established as a result of a network-initiated request or as a result of a subscriber request.
GGSN Address	C	This IE contains the GGSN address for control plane to which the MS is connected, see 3GPP TS 23.003 [7].
Secondary PDP context	C	This IE indicates that the PDP context activation was requested for a secondary PDP context. See 3GPP TS 23.060 [15].
IMEI (with software version)	C	This IE contains the IMEISV (as defined in 3GPP TS 23.003 [7]) of the ME in use by the served subscriber.

Quality of Service contains the following information elements:

Information element name	Status	Description
Requested QoS	C	This IE identifies the QoS requested by the subscriber for a new PDP Context. It shall be included if the InitialDPGPRS is sent at PDP Context Establishment, at PDP Context Establishment Acknowledgement and at Change of Position Context.
Subscribed QoS	C	This IE identifies the subscribed QoS. It shall be included if the InitialDPGPRS is sent at PDP Context Establishment, at PDP Context Establishment Acknowledgement and at Change of Position Context.
Negotiated QoS	C	This IE identifies the QoS which was negotiated between the user, the SGSN and the GGSN. It shall be included if the Initial DP GPRS is sent at PDP Context Establishment Acknowledgement and at Change of Position Context.

End User Address shall be populated as follows:

- At DP Change Of Position Context in an Inter-SGSN Routeing Area Update: Initial DP GPRS and EventReportGPRS contain the selected value;
- At DP PDP Context Establishment: Initial DP GPRS and Event Report GPRS contain the value which the MS has requested;
- At DP PDP Context Establishment Acknowledgement: Initial DP GPRS and Event Report GPRS contain the selected value. Note that the PDP Address is not always available at this DP.

For details see 3GPP TS 23.060 [15].

End User Address contains the following information elements:

Information element name	Status	Description
PDP Type Organization	C	This IE identifies the PDP Type Organisation (e.g. IETF).
PDP Type Number	C	This IE identifies the PDP type, e.g. IPv4 or IPv6.
PDP Address	C	This IE identifies the address of the subscriber for a new PDP Context.

## 6.6.2 gsmSCF to gprsSSF Information Flows

### 6.6.2.1 Activity Test GPRS

#### 6.6.2.1.1 Description

This IF is used to check for the continued existence of a relationship between the gsmSCF and gprsSSF. If the relationship is still in existence, then the gprsSSF will respond. If no reply is received, then the gsmSCF will assume that the gprsSSF has failed in some way and will take the appropriate action.

#### 6.6.2.1.2 Information Elements

Information element name	Status	Description
Gprs Reference Number	C	This IE consists of a number assigned by the gprsSSF and a number assigned by the gsmSCF. It is used for TCAP dialogue segmentation. Refer to 3GPP TS 29.078 [33] for the usage of this element.

### 6.6.2.2 Apply Charging GPRS

#### 6.6.2.2.1 Description

This IF is used for interacting from the gsmSCF with the gprsSSF charging mechanisms to control the charging of a GPRS session or a PDP Context.

#### 6.6.2.2.2 Information Elements

Information element name	Status	Description
Gprs Reference Number	C	This IE consists of a number assigned by the gprsSSF and a number assigned by the gsmSCF. It is used for TCAP dialogue segmentation. Refer to 3GPP TS 29.078 [33] for the usage of this element.
Charging Characteristics	M	This IE specifies the charging related information to be provided by the gprsSSF and the conditions on which this information has to be provided back to the gsmSCF. It is a choice between granted volume and granted time for the data transfer. Time charging may be applied to GPRS Session or PDP Contexts; volume charging may be applied to PDP Context only.
Tariff Switch Interval	O	This information element specifies the time until the next tariff switch occurrence.
PDP ID	C	This IE identifies the PDP Context to which the IF applies.  Scenario 1: If this IE is not present in the IF, then the Apply Charging GPRS applies to the GPRS Session. If this IE is present in the IF, then the Apply Charging GPRS applies to the indicated PDP Context. Scenario 2: This IE is not used in the IF.

### 6.6.2.3 Apply Charging Report GPRS ack

#### 6.6.2.3.1 Description

This IF is the response to the Apply Charging Report GPRS.

### 6.6.2.3.2 Information Elements

This IF contains no information elements.

### 6.6.2.4 Cancel GPRS

#### 6.6.2.4.1 Description

This IF is used by the gsmSCF to request the gprsSSF to cancel all EDPs and reports.

#### 6.6.2.4.2 Information Elements

Information element name	Status	Description
Gprs Reference Number	C	This IE consists of a number assigned by the gprsSSF and a number assigned by the gsmSCF. It is used for TCAP dialogue segmentation. Refer to 3GPP TS 29.078 [33] for the usage of this element.
PDP ID	C	This IE identifies the PDP Context to which the IF applies.  Scenario 1: If this IE is not present in the IF, then all pending reports of the GPRS Session and all pending reports of the PDP Contexts shall be cancelled and all armed events of the GPRS Session, all armed events of the PDP Contexts and all generically armed events shall be disarmed. If this IE is present in the IF, then all pending reports of the indicated PDP Context shall be cancelled and all armed events of the indicated PDP Context shall be disarmed.  Scenario 2: This IE is not used in the IF.

### 6.6.2.5 Connect GPRS

#### 6.6.2.5.1 Description

This IF is used by the gsmSCF to request the gprsSSF to modify the APN used when establishing a PDP Context. This IF shall not be used for a secondary PDP context or for a network initiated PDP context.

#### 6.6.2.5.2 Information Elements

Information element name	Status	Description
Access Point Name	M	This IE contains the Access Point Name (APN) to be used when establishing the PDP Context. The gsmSCF should provide an APN which is allowed by the served subscriber's subscription. The APN provided by the gsmSCF is used for selecting the primary PDP context as specified in 3GPP TS 23.060 [15]. The gsmSCF provided APN may consist of Network Identity (NI) only, or Network Identity and Operator Identity (OI). The APN provided by the gsmSCF replaces entirely the APN requested by the MS. If the gsmSCF does not provide OI in APN then the SGSN selects the OI independent of MS.
PDP Id	C	This IE identifies the PDP Context to which the IF applies.  Scenario 1: There shall always be this IE present in this IF. This IE indicates the PDP Context to which the Connect GPRS applies.  Scenario 2: This IE is not used in the IF.

### 6.6.2.6 Continue GPRS

#### 6.6.2.6.1 Description

This information flow requests the gprsSSF to proceed with processing at the DP at which it previously suspended processing to await gsmSCF instructions. The gprsSSF completes DP processing, and continues processing (i.e., proceeds to the next point in the Attach/Detach State Model or PDP Context State Model) without substituting new data from the gsmSCF.

## 6.6.2.6.2 Information Elements

Information element name	Status	Description
PDP ID	C	This IE identifies the PDP Context to which the IF applies.  Scenario 1: If this IE is not present in the IF, then the Continue GPRS applies to the GPRS Session. If this IE is present in the IF, then the Continue GPRS applies to the indicated PDP Context. Scenario 2: This IE is not used in the IF.

## 6.6.2.7 Entity Released GPRS ack

## 6.6.2.7.1 Description

This IF is the response to the Entity Released GPRS.

## 6.6.2.7.2 Information Elements

This IF contains no information elements.

## 6.6.2.8 Event Report GPRS ack

## 6.6.2.8.1 Description

This IF is the response to the Event Report GPRS.

## 6.6.2.8.2 Information Elements

This IF contains no information elements.

## 6.6.2.9 Furnish Charging Information GPRS

## 6.6.2.9.1 Description

This IF is used to request the gprsSSF to include information in the CAMEL specific logical call record.

The logical call record is created when FCI-GPRS is received and a logical call record for that state model does not exist. For modelling purposes the logical call record is buffered in the gprsSSF. The gprsSSF completes logical call records as defined in the SDLs. Once the logical call record is completed, then its free format data are moved to the corresponding CDR and the logical call record is deleted.

In the SGSN there is a separate Logical call record for the attach/detach state model and for each PDP context.

The CSE can send multiple concatenated FCIs per Logical Call Record for completion. The total maximum of free format data is 160 octets per Logical Call Record. The 160 octets may be sent in one or more FCI IF. If there is incomplete free format data and one or more new FCI IFs is/are received to overwrite the incomplete data, then the incomplete data are discarded and the gsmSCF can send another 160 octets per CDR.

## 6.6.2.9.2 Information Elements

Information element name	Status	Description
Gprs Reference Number	C	This IE consists of a number assigned by the gprsSSF and a number assigned by the gsmSCF. It is used for TCAP dialogue segmentation.
FCI GPRS Billing Charging Characteristics	M	This IE is described in a table below.

FCI GPRS Billing Charging Characteristics contains the following information:

Information element name	Status	Description
FCIBCCCAMEL Sequence 1	M	This IE is described in a table below.

FCIBCCCAMEL Sequence 1 contains the following information:

Information element name	Status	Description
Free Format Data	M	This IE contains free format data to be inserted in the CAMEL logical call record.
Append Free Format Data	O	This IE indicates that the gprsSSF shall append the free format data to the Logical call record. In the SGSN there is a separate Logical call record for the attach/detach state model and for each PDP context. <ul style="list-style-type: none"> <li>- If this IE is present indicating "Append", the gprsSSF shall append the free format data received in this IF to the free format data already present in the Logical call record for that GPRS session or PDP Context.</li> <li>- If this IE is absent or indicates "Overwrite", then the gprsSSF shall overwrite all free format data already present in the Logical call record for that GPRS session or PDP Context, by the free format data received in this IF.</li> </ul> If no Logical call record exists yet for that GPRS session or PDP Context, then the gprsSSF shall ignore this IE.
PDP Id	C	This IE identifies the PDP Context to which the IF applies. <p>Scenario 1: If this IE is not present in the IF, then the Furnish Charging Information GPRS applies to the GPRS Session. If this IE is present in the IF, then the Furnish Charging Information GPRS applies to the indicated PDP Context.</p> <p>Scenario 2: This IE is not used in the IF.</p>

## 6.6.2.10 Release GPRS

### 6.6.2.10.1 Description

This IF is used by the gsmSCF to tear down an existing GPRS session or PDP Context at any time.

### 6.6.2.10.2 Information Elements

Information element name	Status	Description
Gprs Reference Number	C	This IE consists of a number assigned by the gprsSSF and a number assigned by the gsmSCF. It is used for TCAP dialogue segmentation.
GPRS Cause	M	This IE contains the Cause value indicating the reason for releasing the GPRS session or PDP context.
PDP ID	C	This IE identifies the PDP Context to which the IF applies. <p>Scenario 1: If this IE is not present in the IF, then the Release GPRS applies to the GPRS Session, in which case the GPRS Session and all PDP Contexts shall be released. If this IE is present in the IF, then the Release GPRS applies to the indicated PDP Context, in which case the indicated PDP Context shall be released.</p> <p>Scenario 2: This IE is not used in the IF.</p>

## 6.6.2.11 Request Report GPRS Event

### 6.6.2.11.1 Description

This IF is used to request the gprsSSF to monitor for an event and send a notification back to the gsmSCF when the event is detected (see Event Report GPRS IF).

## 6.6.2.11.2 Information Elements

Information element name	Status	Description
Gprs Reference Number	C	This IE consists of a number assigned by the gprsSSF and a number assigned by the gsmSCF. It is used for TCAP dialogue segmentation.
GPRS Event	M	This IE specifies the event or events of which a report is requested.
PDP ID	C	This IE identifies the PDP Context to which the IF applies.  Scenario 1: If this IF is used to arm an event related to the GPRS Session, then this IF shall not include this IE. If this IF is used to arm an event related to a specific PDP Context, then this IF shall include this IE for that PDP Context. If this IF is used to generically arm a PDP Context related event, then this IF shall not include this IE.  Scenario 2: This IE is not used in the IF.

GPRS Event contains the following information elements:

Information element name	Status	Description
GPRS Event type	M	This IE specifies the type of event of which a report is requested.
Monitor Mode	M	This IE indicates how the event shall be reported.

## 6.6.2.12 Reset Timer GPRS

## 6.6.2.12.1 Description

This IF is used to refresh the gprsSSF timer.

## 6.6.2.12.2 Information Elements

Information element name	Status	Description
Gprs Reference Number	C	This IE consists of a number assigned by the gprsSSF and a number assigned by the gsmSCF. It is used for TCAP dialogue segmentation.
Timer ID	M	This IE specifies the default value for the Tssf timer.
Timer Value	M	This IE specifies the value to which the timer Tssf shall be set.

## 6.6.2.13 Send Charging Information GPRS

## 6.6.2.13.1 Description

This IF is used to send e-parameters from the gsmSCF to the gprsSSF. If charge advice information is received from the gsmSCF, it shall replace the charge advice information which would be generated by the SGSN and inhibit any further generation of CAI by the SGSN. Further processing of the charge advice information by the SGSN shall be in accordance with the Advice of Charge supplementary service.

If the SGSN supports Advice of Charge, then the gsmSCF may use this IF to send e-parameters to the gprsSSF. However, if the subscriber is not provisioned with the Advice of Charge supplementary service, then no e-parameters shall be sent to the MS and no error due to this fact shall be sent back to the gsmSCF.

If the SGSN does not support Advice of Charge, then the gsmSCF shall not send e-parameters to the gprsSSF.

The SGSN's support of Advice of Charge is indicated in the Initial DP GPRS IF.

**NOTE:** If charge advice information is received from the gsmSCF after charge information has been generated by the SGSN and sent to the MS, the behaviour of the service may be unpredictable or incorrect; the service designer should therefore ensure that the first set of charge advice information is sent to the gprsSSF before charge information is sent to the MS.

### 6.6.2.13.2 Information Elements

Information element name	Status	Description
Gprs Reference Number	C	This IE consists of a number assigned by the gprsSSF and a number assigned by the gsmSCF. It is used for TCAP dialogue segmentation.
SCI GPRS Billing ChargingCharacteristics	M	This IE defines the Advice Of Charge related information to be provided to the Mobile Station, if supported by the SGSN.

GPRS SCI Billing Charging Characteristics contains the following information elements:

Information element name	Status	Description
AOC GPRS	M	This IE is present after an Activate PDP Context Accept or Attach Accept has been received from the SGSN. This IE defines the Advice Of Charge related information to be provided to the Mobile Station, if supported by the SGSN.
PDP Id	C	This IE identifies the PDP Context to which the IF applies.  Scenario 1: If this IE is not present in the IF, then the Send Charging Information GPRS applies to the GPRS Session. If this IE is present in the IF, then the Send Charging Information GPRS applies to the indicated PDP Context.  Scenario 2: This IE is not used in the IF.

AOC GPRS contains the following information elements:

Information element name	Status	Description
AOC Initial	M	This IE contains CAI elements as defined in 3GPP TS 22.024 [3].
AOC Subsequent	O	This IE is described in a table below.

AOC Subsequent contains the following information elements:

Information element name	Status	Description
CAI Elements	M	This IE contains CAI elements as defined in 3GPP TS 22.024 [3].
Tariff Switch Interval	O	This IE indicates the tariff switch time until the next tariff switch applies.

## 6.6.3 HLR to SGSN Information Flows

### 6.6.3.1 Delete Subscriber Data

#### 6.6.3.1.1 Description

This IF is used by the HLR to delete CAMEL subscription data from an SGSN. It is specified in 3GPP TS 29.002 [32].

#### 6.6.3.1.2 Information Elements

The Delete Subscriber Data IF contains the following CAMEL specific information elements:

Information element name	Status	Description
CAMEL Subscription Info Withdraw	O	This IE identifies that all CSIs shall be deleted from the subscriber data in SGSN.
Specific CSI Withdraw	O	This IE is used to indicate that only GPRS-CSI shall be deleted from the SGSN. This IE should not be present when CAMEL Subscription Info Withdraw is present.

### 6.6.3.2 Insert Subscriber Data

#### 6.6.3.2.1 Description

This IF is specified in 3GPP TS 29.002 [32] and used by the HLR to insert subscriber data in the SGSN.

#### 6.6.3.2.2 Information Elements

Insert Subscriber Data contains the following CAMEL specific information element:

Information element name	Status	Description
GPRS-CSI	O	This IE identifies the subscriber as having CAMEL GPRS services.

GPRS-CSI contains the following information elements:

Information element name	Status	Description
GsmSCF Address	M	See subclause 6.3.1.1.
Service Key	M	See subclause 6.3.1.2.
Default Session Handling	M	See subclause 6.3.1.3.
TDP List	M	See subclause 6.3.1.4.
CAMEL Capability Handling	M	See subclause 6.3.1.5.

## 6.6.4 SGSN to HLR Information Flows

### 6.6.4.1 Insert Subscriber Data ack

See subclause 4.6.8.1.

### 6.6.4.2 Update GPRS Location

#### 6.6.4.2.1 Description

This IF is used by the SGSN to indicate to the HLR the CAMEL phases supported by the SGSN. It is specified in 3GPP TS 29.002 [32].

#### 6.6.4.2.2 Information Elements

Update GPRS location contains the following CAMEL specific information element:

Information element name	Status	Description
Supported CAMEL Phases	S	This IE identifies which CAMEL phases are supported by the SGSN. The SGSN may indicate support of CAMEL phase 3 or higher. It shall be present when the SGSN supports CAMEL.

## 7 Short Message Services

### 7.1 Architecture

#### 7.1.1 Functional Entities used for CAMEL

This subclause describes the functional architecture needed to support Mobile Originating Short Message Service (MO SMS) and Mobile Terminating Short Message Service (MT SMS) interworking for CAMEL. Figures 7.1a and 7.1b show the functional entities involved in MO or MT Short Message requiring CAMEL support.

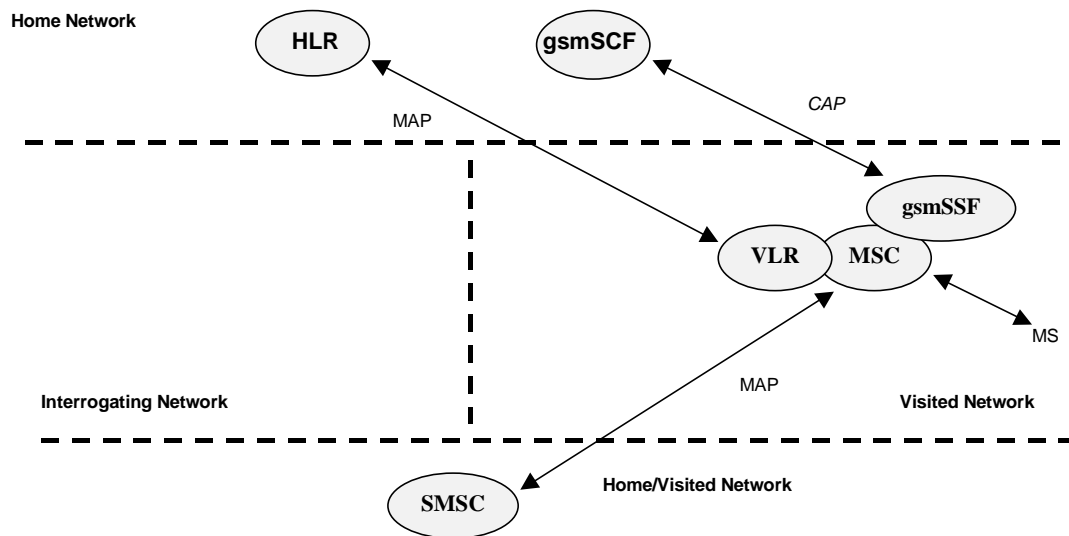

Figure 7.1a: Functional architecture for support of CAMEL control of MSC switched MO and MT SMS

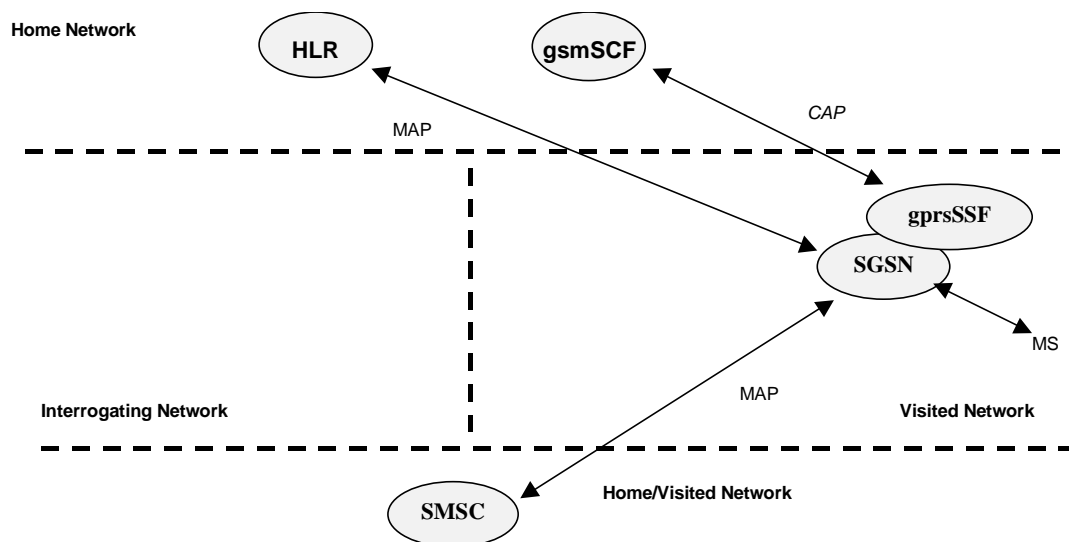

Figure 7.1b: Functional architecture for support of CAMEL control of SGSN switched MO and MT SMS

**HLR:** The HLR stores MO-SMS-CSI and/or MT-SMS-CSI. MO-SMS-CSI contains subscription information for subscribers that require CAMEL support of MO SMS. MT-SMS-CSI contains subscription information for subscribers that require CAMEL support of MT SMS. One or both of MO-SMS-CSI and MT-SMS-CSI are transferred to the VLR or to the SGSN on Location Update and Restore Data or when MO-SMS-CSI or MT-SMS-CSI has changed.

**VLR:** The VLR receives the MO-SMS-CSI and MT-SMS-CSI for the subscriber from the HLR. MO-SMS-CSI and MT-SMS-CSI are used by the MSC to determine if a Service Logic shall be invoked for an MO SMS or MT SMS.

**SGSN:** The SGSN receives the MO-SMS-CSI and MT-SMS-CSI for the subscriber from the HLR. The SGSN uses the MO-SMS-CSI and MT-SMS-CSI to determine if a Service Logic shall be invoked for an MO SMS or MT SMS.

**MSC:** The MSC receives MO-SMS-CSI and MT-SMS-CSI from the VLR and uses this to determine if a Service Logic shall be invoked for an MO SMS or MT SMS.

**gprsSSF:** see subclause 3.1.

**gsmSSF:** see subclause 3.1.

**gsmSCF:** see subclause 3.1.

**SMSC:** Short Message Service Centre.

## 7.1.2 Interfaces defined for CAMEL

### 7.1.2.1 HLR – VLR interface

This interface is used to send CAMEL related subscriber data (MO-SMS-CSI and MT-SMS-CSI) to a visited MSC/VLR or to remove CAMEL related subscriber data from a visited MSC/VLR.

### 7.1.2.2 HLR – SGSN interface

This interface is used to send CAMEL related subscriber data (MO-SMS-CSI and MT-SMS-CSI) to a visited SGSN or to remove CAMEL related subscriber data from a visited SGSN.

### 7.1.2.3 gsmSSF - gsmSCF interface

This interface is used by the gsmSCF to control the handling of MO SMS and MT SMS in the MSC. A relationship on this interface is opened as a result of the gsmSSF sending a request for instructions to the gsmSCF.

### 7.1.2.4 gprsSSF - gsmSCF interface

This interface is used by the gsmSCF to control the handling of MO SMS and MT SMS in the SGSN. A relationship on this interface is opened as a result of the gprsSSF sending a request for instructions to the gsmSCF.

### 7.1.2.5 MSC - gsmSSF interface

This is an internal interface. The interface is described in the present document to make it easier to understand the handling of DPs (arming/disarming of DPs, DP processing etc.).

### 7.1.2.6 SGSN - gprsSSF interface

This is an internal interface. The interface is described in the present document to make it easier to understand the handling of DPs (arming/disarming of DPs, DP processing etc.).

### 7.1.2.7 MSC - VLR interface

This is an internal interface. The interface is described in the present document to make it easier to understand the internal information flow within the MSC/VLR.

### 7.1.2.8 MSC - SMSC interface

This interface is used by the MSC to submit a SM to the SMSC and to deliver a SM to the MSC.

### 7.1.2.9 SGSN - SMSC interface

This interface is used by the SGSN to submit a SM to the SMSC and to deliver a SM to the SGSN.

## 7.2 Detection Points (DPs)

For the general handling of the DPs, see subclause 4.2.

### 7.2.1 Criteria at DP SMS Delivery Request

The HLR may store a criterion that indicates when triggering shall take place. The criterion for DP SMS\_Delivery\_Request consists of a list of TPDU types. Refer to 3GPP TS 23.040 [14] for the available TPDU types. When the TPDU type of the Short Message is present in the list of TPDU types, then triggering shall take place. Otherwise, triggering shall not take place.

If no criterion is defined for a subscriber, then triggering shall take place regardless of the TPDU type of the Short Message.

## 7.3 Description of CAMEL Subscriber Data

Note: CAMEL Phase 3 specifies SMS-CSI for MO SMS CAMEL Services. CAMEL Phase 4 specifies MO-SMS-CSI for MO SMS CAMEL Services and MT-SMS-CSI for MT SMS CAMEL Services. SMS-CSI and MO-SMS-CSI are, however, syntactically and functionally identical.

### 7.3.1 Mobile Originating Short Message Service CAMEL Subscription Information (MO-SMS-CSI)

This subclause defines the contents of the Short Message Service CAMEL Subscription Information.

#### 7.3.1.1 gsmSCF address

Address to be used to access the gsmSCF for a particular subscriber. The address shall be an E.164 number to be used for routing.

#### 7.3.1.2 Service Key

The Service Key identifies to the gsmSCF the service logic.

#### 7.3.1.3 Default SMS Handling

The Default SMS Handling indicates whether the Short Message submission shall be released or continued as requested in the case of error in the dialogue between gsmSCF and gsmSSF or gprsSSF.

#### 7.3.1.4 TDP List

The TDP List indicates on which detection point triggering shall take place. For MO-SMS-CSI only DP SMS\_Collected\_Info is used.

#### 7.3.1.5 CAMEL Capability Handling

CAMEL Capability Handling indicates the phase of CAMEL which is asked by the gsmSCF for the service. This parameter shall be set to CAMEL Phase 3

#### 7.3.1.6 CSI state

The CSI state indicates whether the MO-SMS-CSI is active or not.

#### 7.3.1.7 Notification flag

The notification flag indicates whether the change of the MO-SMS-CSI shall trigger Notification on Change of Subscriber Data or not.

### 7.3.2 Mobile Terminating Short Message Service CAMEL Subscription Information (MT-SMS-CSI)

This subclause defines the contents of the Mobile Terminating Short Message Service CAMEL Subscription Information.

#### 7.3.2.1 gsmSCF address

Address to be used to access the gsmSCF for a particular subscriber. The address shall be an E.164 number to be used for routing.

### 7.3.2.2 Service Key

The Service Key identifies to the gsmSCF the service logic.

### 7.3.2.3 Default SMS Handling

The Default SMS Handling indicates whether the Short Message delivery shall be released or continued as requested in the case of error in the dialogue between gsmSCF and gsmSSF or gprsSSF.

### 7.3.2.4 TDP List

The TDP List indicates on which detection point triggering shall take place. For MT-SMS-CSI only DP SMS\_Delivery\_Request is used.

### 7.3.2.5 DP criteria

The DP criteria indicate whether the SMS\_SSF shall request the gsmSCF for instructions.

### 7.3.2.6 CAMEL Capability Handling

CAMEL Capability Handling indicates the phase of CAMEL which is asked by the gsmSCF for the service. This parameter shall be set to CAMEL Phase 4.

### 7.3.2.7 CSI state

The CSI state indicates whether the MT-SMS-CSI is active or not.

### 7.3.2.8 Notification flag

The notification flag indicates whether the change of the MT-SMS-CSI shall trigger Notification on Change of Subscriber Data or not.

## 7.3.3 gsmSCF address list for CSI

The gsmSCF address list indicates a list of gsmSCF addresses to which Notification on Change of Subscriber Data is to be sent. This list is common to all CSI's.

## 7.4 Description of SMS State Models

### 7.4.1 General Handling

See subclause 4.4.1.

The State Model for MO SMS handling contains Points in Association (PIA's) instead of Points in Call (PIC's).

### 7.4.2 Mobile Originating SMS State Models

#### 7.4.2.1 Description of MO SMS state model

The MO SMS state model is used to describe the actions in an MSC and in a SGSN during Mobile Originating SMS.

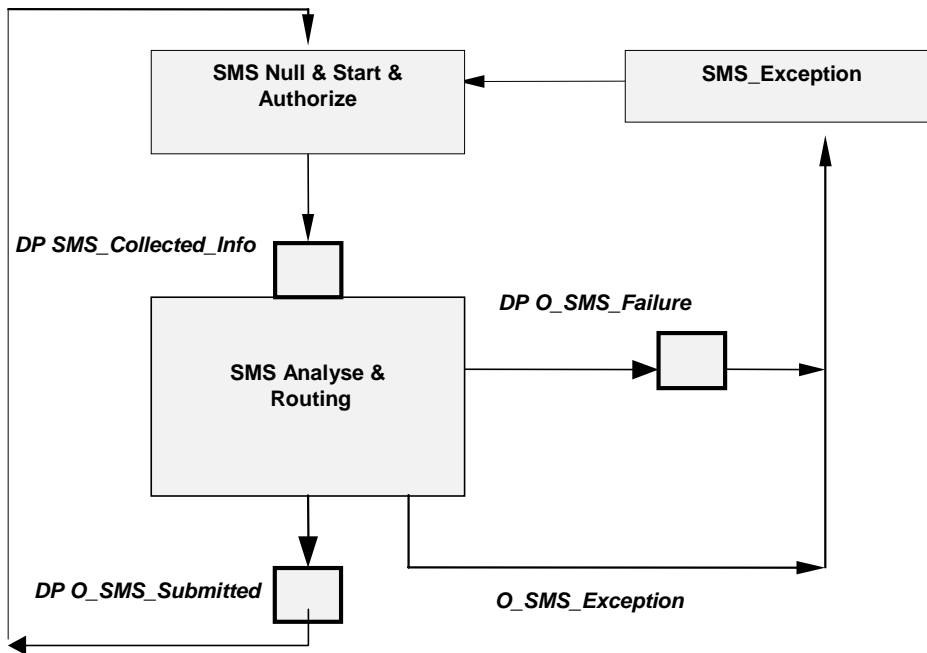

Figure 7.2: MO SMS State Model

Table 7.1: Description of MO SMS DPs in the MSC and SGSN

CAMEL Detection Point	DP Type	Description
DP SMS_Collected_Info	TDP-R	Indication that the MO-SMS-CSI is analysed and a mobile originated short message is received.
DP O_SMS_Failure	EDP-N, EDP--R	Indication that the SM submission to the Short Message Service Centre failed
DP O_SMS_Submitted	EDP-N, EDP-R	Indication that the SM has been successfully submitted to the Short Message Service Centre.

7.4.2.1.1 Description of the MO SMS state model (PIAs)

This subclause describes the state model for originating SMS transfer. For each PIA a description can be found of the entry events, actions and exit events.

7.4.2.1.1.1 SMS Null & Start & Authorize

Entry events:

- Previous MO SMS transfer to the SMSC completed (DP O\_SMS\_Submitted).
- Exception event is reported.

Actions:

- Interface is idled.
- Authentication.
- Ciphering.
- MO SMS subscription check.
- RP-MO-DATA message containing the User Data and the SMSC address is received from MS.
- The supplementary service "barring of all outgoing calls" is checked and invoked if necessary.
- The ODB category "barring of all outgoing calls" is checked and ODB is invoked if necessary.

Exit events:

- MO-SMS-CSI is analysed.
- An exception condition is encountered.

#### 7.4.2.1.1.2 SMS Analyse & Routing

Entry events:

- MO-SMS - CSI is analysed (DP SMS\_Collected\_Info).

Actions:

- Information being analysed and/or translated to determine routing address of the SMSC.
- Outgoing barring services and ODB categories not already applied are checked and invoked if necessary.
- The short message is sent to the SMSC.

Exit events:

- Acknowledge from the SMSC is received. (DP O\_SMS\_submitted).

A positive acknowledgement is sent to the MS.

- An exception condition is encountered - this leads to the SMS\_Exception PIA.

A negative acknowledgement is sent to the MS.

- Attempt to select the route for the SMS fails (DP O\_SMS\_Failure).

A negative acknowledgement is sent to the MS.

- Negative acknowledgement from the SMSC is received (DP O\_SMS\_Failure).

A negative acknowledgement is sent to the MS.

#### 7.4.2.1.1.3 SMS\_Exception

Entry events:

- An exception condition is encountered. In addition to specific examples listed above, exception events include any type of failure, which means that the normal exit events for a PIA cannot be met.

Actions:

- Default handling of the exception condition is applied. This includes general actions necessary to ensure that no resources remain inappropriately allocated such as:
  - If a relationship exists between the gsmSCF and gsmSSF or gprsSSF send an error information flow closing the relationship and indicating that any outstanding Short Message handling instructions will not run to completion.
  - The MSC/gsmSSF or SGSN/gprsSSF shall make use of vendor-specific procedures to ensure release of internal resources.

Exit events:

- Default handling of the exception condition by MSC/gsmSSF or SGSN/gprsSSF completed.

### 7.4.3 Mobile Terminating SMS State Model

#### 7.4.3.1 Description of MT SMS state model

The MT SMS state model is used to describe the actions in an MSC and in a SGSN during Mobile Terminating SMS.

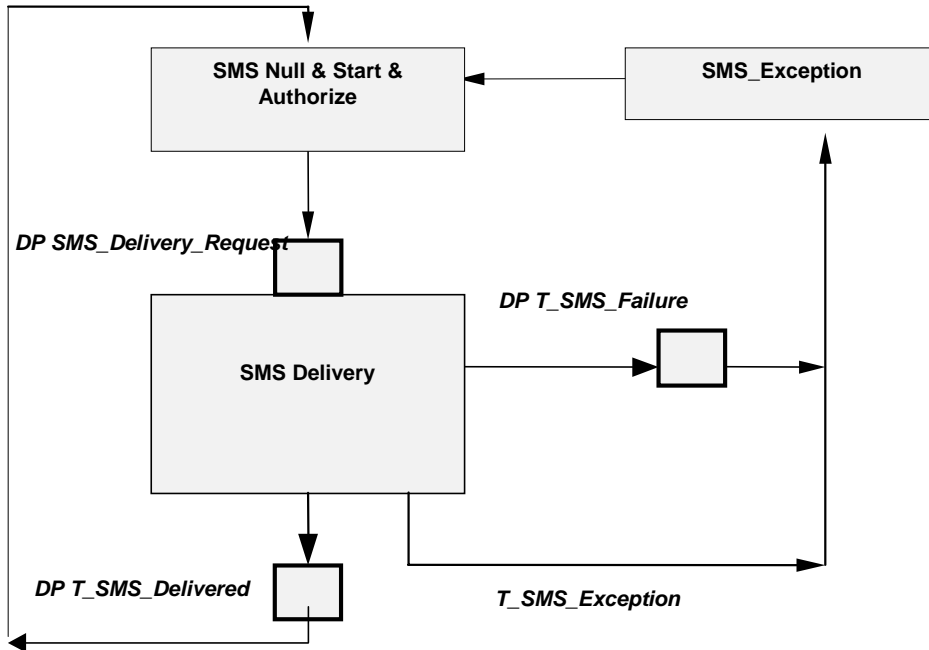

Figure 7.3: MT SMS State Model

Table 7.2: Description of MT SMS DPs in the MSC and SGSN

CAMEL Detection Point	DP Type	Description
DP SMS_Delivery_Request	TDP-R	Indication that the MT-SMS-CSI is analysed and a mobile terminating short message or status report is received.
DP T_SMS_Failure	EDP-N, EDP-R	Indication that the SM delivery to the Mobile Station has failed
DP T_SMS_Delivered	EDP-N, EDP-R	Indication that the SM has been successfully delivered to the Mobile Station.

##### 7.4.3.1.1 Description of the MT SMS state model (PIAs)

This subclause describes the state model for terminating SMS transfer. For each PIA a description can be found of the entry events, actions and exit events.

###### 7.4.3.1.1.1 SMS Null & Start & Authorize

Entry events:

- MAP-MT-FORWARD-SHORT-MESSAGE message is received from SMS-GMSC.
- Previous MT SMS transfer to the MS completed (DP T\_SMS\_Delivered).
- Exception event is reported.

Actions:

- Interface is idled.
- MT SMS subscription check.
- MT-SMS-CSI is received from the VLR (in the MSC only).

Exit events:

- MT-SMS-CSI is analysed.
- An exception condition is encountered.

#### 7.4.3.1.1.2 SMS Delivery

Entry events:

- MT-SMS-CSI is analysed. (DP SMS\_Delivery\_Request).

Actions:

- Subscriber paging is performed, if required.
- The short message is delivered to the MS.

Exit events:

- Acknowledge from the MS is received. (DP T\_SMS\_Delivered).  
A positive acknowledgement is sent to the SMSC.
- An exception condition is encountered - this leads to the SMS\_Exception PIA.  
A negative acknowledgement is sent to the SMSC.
- Negative acknowledgement from the MS is received (DP T\_SMS\_Failure).  
A negative acknowledgement is sent to the SMSC.

#### 7.4.3.1.1.3 SMS\_Exception

Entry events:

- An exception condition is encountered. In addition to specific examples listed above, exception events include any type of failure, which means that the normal exit events for a PIA cannot be met.

Actions:

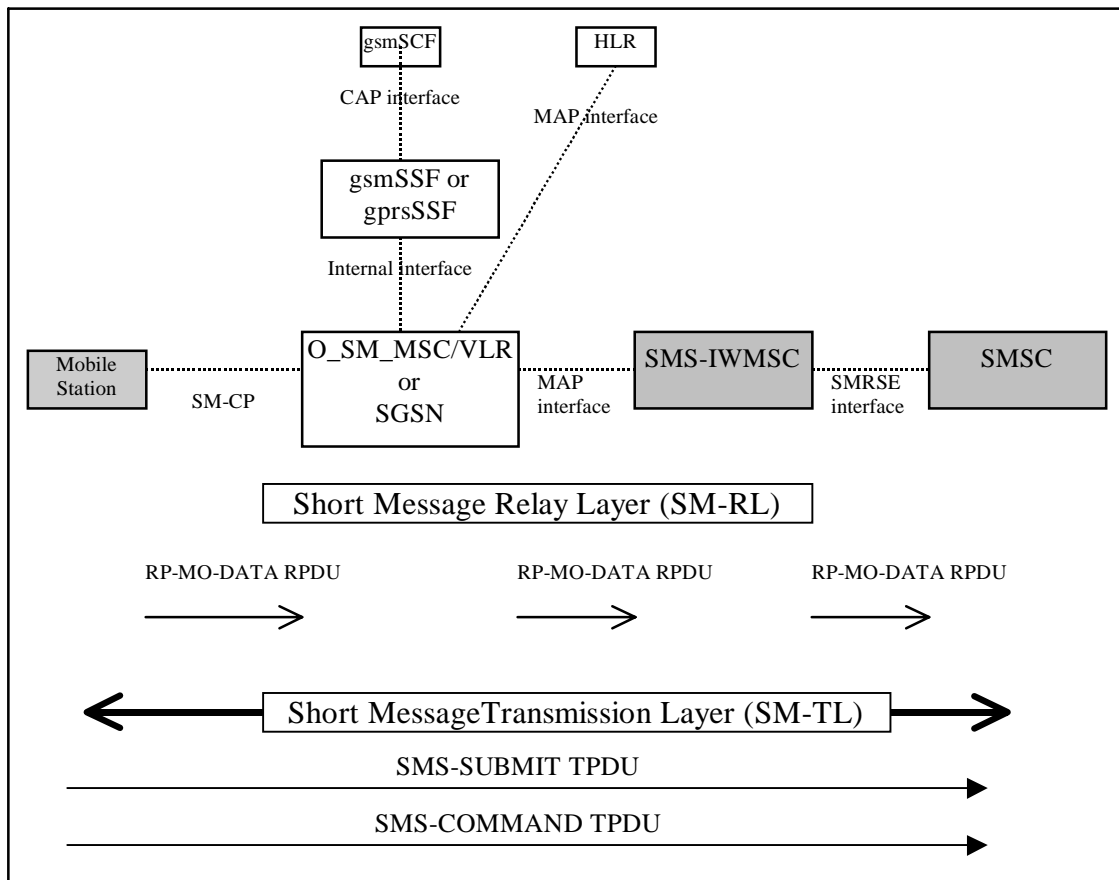

- Default handling of the exception condition is applied. This includes general actions necessary to ensure that no resources remain inappropriately allocated such as:
  - If a relationship exists between the gsmSCF and gsmSSF or gprsSSF send an error information flow closing the relationship and indicating that any outstanding Short Message handling instructions will not run to completion.
  - The MSC/gsmSSF or SGSN/gprsSSF shall make use of vendor-specific procedures to ensure release of internal resources.

Exit events:

- Default handling of the exception condition by MSC/gsmSSF or SGSN/gprsSSF completed.

## 7.5 Procedures for CAMEL SMS

### 7.5.1 Functional architecture for CAMEL MO SMS services

Note The functional entities depicted by means of dark shaded boxes in the figure 7.4 are not affected by CAMEL interaction with MO-SMS.

Note The Relay Protocol between the MS and the MSC or SGSN is described in 3GPP TS 24.011 [29]. The Relay Protocol between the MSC or SGSN and the SMS-GMSC is described in 3GPP TS 29.002 [32]. The Relay Protocol between the SMS-GMSC and the SMSC is not standardised. Examples of this protocol are described in GSM TR 03.47 [39].

**Figure 7.4: MO SMS via MSC or SGSN**

### 7.5.2 Handling of mobile originating SMS

#### 7.5.2.1 Handling of mobile originating SMS in the originating MSC or SGSN

The functional behaviour of the originating MSC or SGSN is specified in 3GPP TS 29.002 [32] and 3GPP TS 23.060 [15]. The procedures specific to CAMEL are specified in this subclause:

- Procedure CAMEL\_O\_SMS\_INIT;
- Procedure CAMEL\_O\_SMS\_SUBMITTED;
- Procedure CAMEL\_O\_SMS\_FAILURE.

A CAMEL Service may be invoked for the following Mobile Originated short message types:

- Short Message Submission (TPDU type = SMS-SUBMIT)
- Short Message Command (TPDU type = SMS-COMMAND)

Refer to 3GPP TS 23.040 [14] for a description of the various TPDU types.

#### 7.5.2.1.1 Actions of the MSC or SGSN on receipt of Int\_Error

The MSC or SGSN checks the default SMS Handling parameter in MO-SMS-CSI.

If the default SMS handling is 'releaseTransaction', a A\_RP\_ERROR is sent to the MS. The MSC or SGSN then releases all resources and the procedure CAMEL\_O\_SMS\_INIT ends.

If the default SMS handling is 'continueTransaction', the MSC or SGSN continues processing without CAMEL support.

#### 7.5.2.1.2 Actions of the MSC or SGSN on receipt of Int\_Continue\_SMS

The MSC or SGSN continues processing with modified SM parameters. The MSC or SGSN shall transparently modify the SMS parameters with the received information. Parameters which are not included in the Int\_Continue\_SMS signal are unchanged.

#### 7.5.2.1.3 Actions of the MSC or SGSN on receipt of Int\_Connect\_SMS

The MSC or SGSN continues processing with modified SM parameters. The MSC or SGSN shall transparently modify the SMS parameters with the received information. Barring is checked with the modified parameters. Parameters which are not included in the Int\_Connect\_SMS signal are unchanged.

#### 7.5.2.1.4 Actions of the MSC or SGSN on receipt of Int\_Release\_SMS

A\_RP\_ERROR is sent to the MS and the Short Message is deleted. The SMS cause received in the Int\_Release\_SMS signal is used. The MSC or SGSN then releases all resources and the procedure CAMEL\_O\_SMS\_INIT ends.

#### 7.5.2.1.5 Allocation of SMS Reference Number

During the CAMEL handling of a Mobile Originated Short Message, the MSC or SGSN shall allocate an SMS Reference Number. This SMS Reference Number shall be placed in the SMS-MO Call Detail Record, together with the MSC Address or SGSN Number. This SMS Reference Number shall also be sent to the gsmSCF in the Initial DP SMS Information Flow, together with the MSC Address or SGSN Number. The combination of SMS Reference Number and MSC Address or SGSN Number forms a globally unique pair. This pair may be used for correlation of CDRs produced in the MSC or SGSN with CDRs produced in the gsmSCF.

An SMS Reference Number shall be generated and placed in the SMS-MO Call Detail Record, for every Short Message, including the case when a Short Message forms part of a set of concatenated Short Messages.

#### 7.5.2.2 Handling of A\_MM\_Release and A\_LLC\_Release

If the radio link with the subscriber is lost during the handling of a CAMEL procedure in the MSC or SGSN, then the MSC or SGSN sends signal A\_MM\_Release\_ind or A\_LLC\_Release\_ind to that procedure. This results in the termination of that CAMEL procedure. (Refer to 3GPP TS 29.002 [32] for details.)

#### 7.5.2.3 Handling of time-out from SMSC

If the MSC or SGSN does not receive a confirmation from the SMSC after submission of a Short Message, then the MSC or SGSN calls procedure CAMEL\_O\_SMS\_FAILURE. (Refer to 3GPP TS 29.002 [32] for details.)

### Procedure CAMEL\_O\_SMS\_INIT

1(3)

/\* A procedure in the MSC or SGSN to perform CAMEL handling of mobile originated SMS submission request.\*/

/\* Signals to/from the right are to/from gsmSSF/gprsSSF (SMS\_SSF). Signals from the left are from MS, unless otherwise stated.\*/

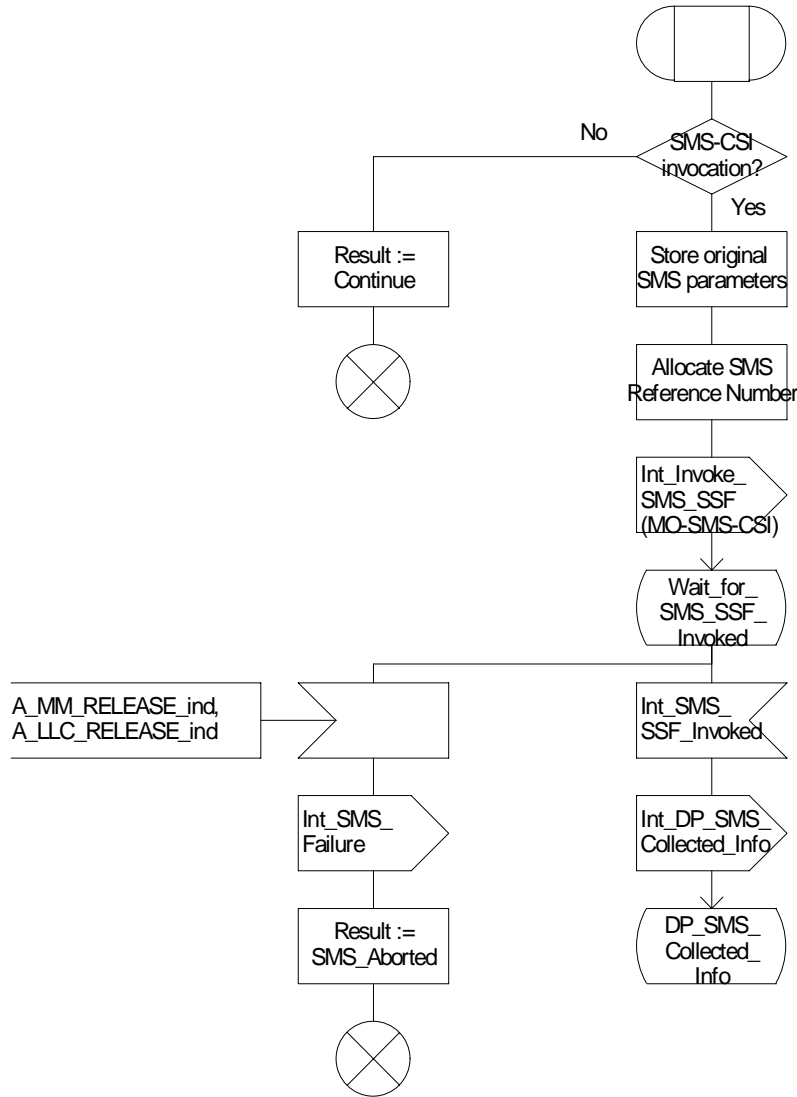

Figure 7.5a: Procedure CAMEL\_O\_SMS\_INIT (sheet 1)

### Procedure CAMEL\_O\_SMS\_INIT

2(3)

/\* A procedure in the MSC or SGSN to perform CAMEL handling of mobile originated SMS submission request.\*/

/\* Signals from the right are from gsmSSF/gprsSSF (SMS\_SSF).\*/

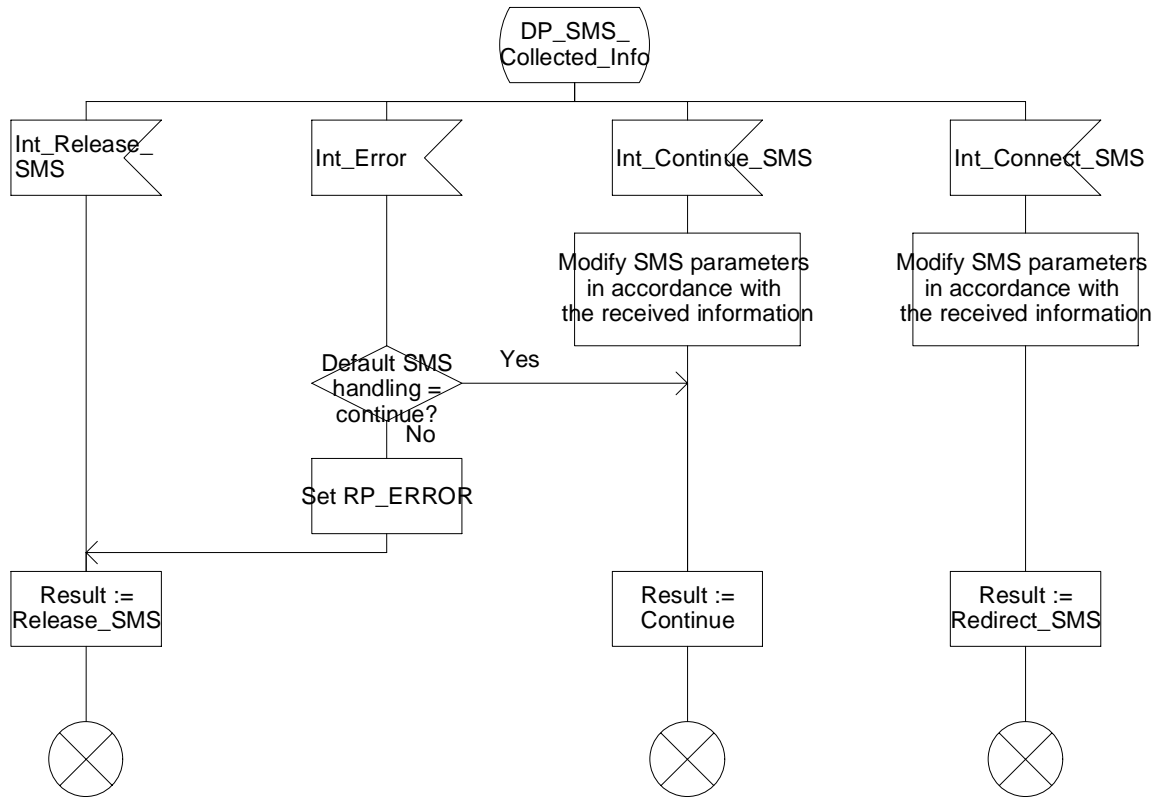

Figure 7.5b: Procedure CAMEL\_O\_SMS\_INIT (sheet 2)

### Procedure CAMEL\_O\_SMS\_INIT

3(3)

/\* A procedure in the MSC or SGSN to perform CAMEL handling of mobile originated SMS submission request.\*/

/\* Signal to the right is to gsmSSF/gprsSSF (SMS\_SSF). Signals from the left are from MS.\*/

Figure 7.5c: Procedure CAMEL\_O\_SMS\_INIT (sheet 3)

### Procedure CAMEL\_O\_SMS\_SUBMITTED

1(1)

/\* Procedure in the MSC or SGSN (SMS\_SSF) to report successful submission to gsmSCF of CAMEL. \*/

/\* Signals to/from the right are to/from gsmSSF/gprsSSF (SMS\_SSF). \*/

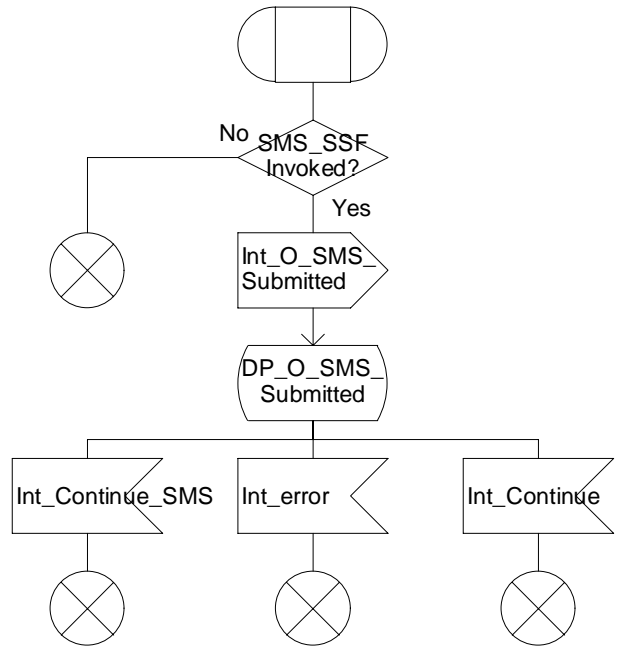

Figure 7.6a: Procedure CAMEL\_O\_SMS\_SUBMITTED (sheet 1)

### Procedure CAMEL\_O\_SMS\_FAILURE

1(1)

/\* Procedure in the MSC or SGSN to handle CAMEL notification to gsmSCF about unsuccessful submission. \*/

/\* Signals to/from the right are to/from gsmSSF/gprsSSF (SMS\_SSF). \*/

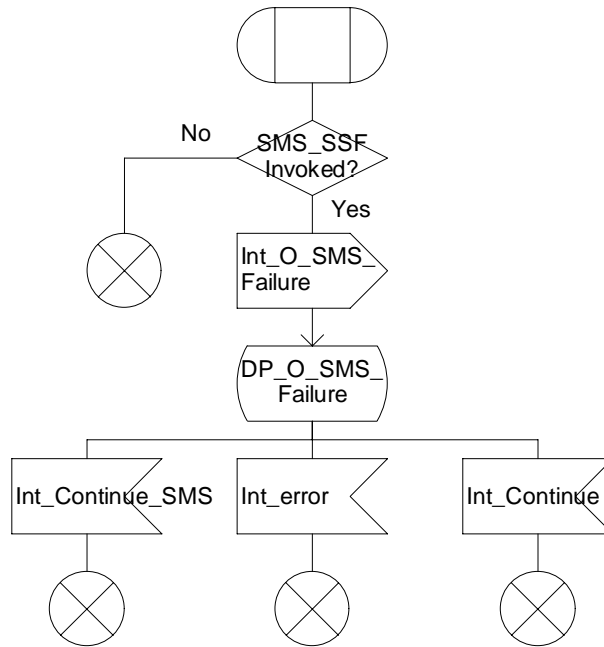

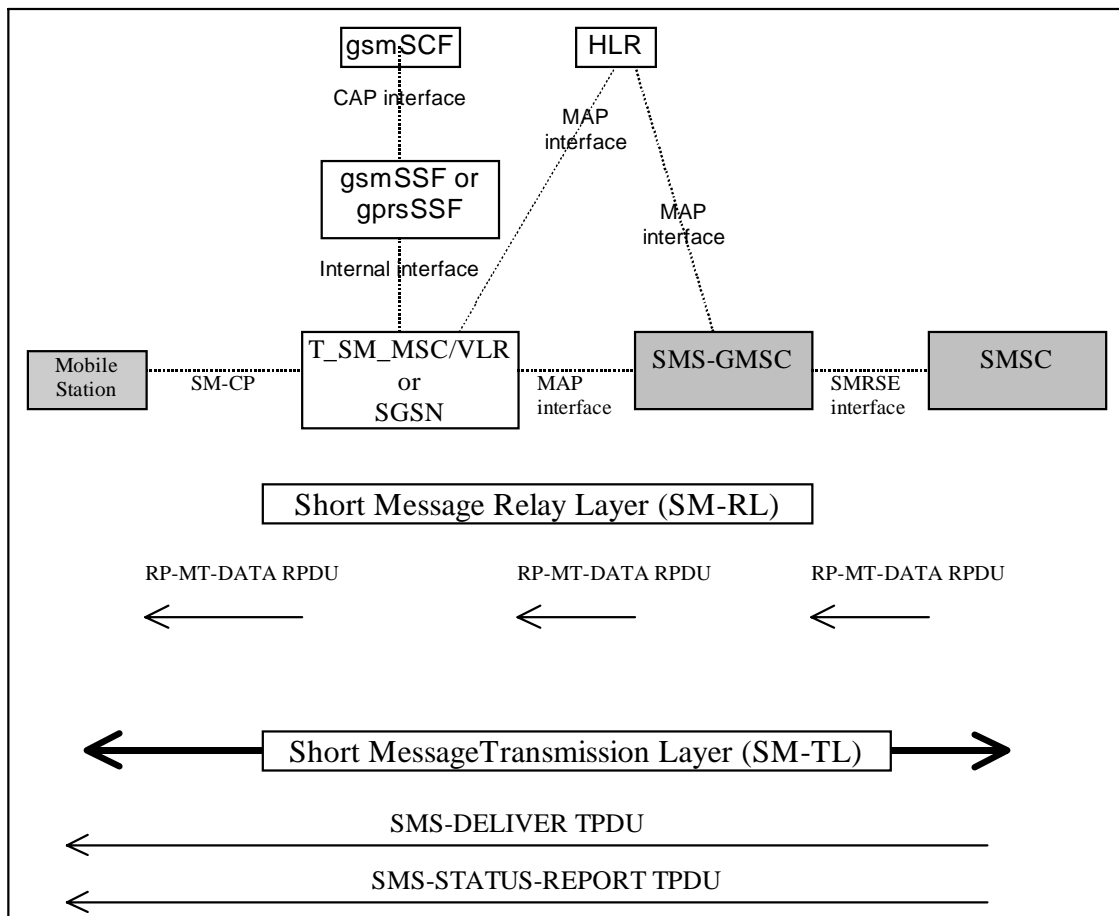

Figure 7.7a: Procedure CAMEL\_O\_SMS\_FAILURE (sheet 1)

### 7.5.3 Functional architecture for CAMEL MT SMS services

Note The functional entities depicted by means of dark shaded boxes in the figure 7.8 are not affected by CAMEL interaction with MT-SMS.

Note The Relay Protocol between the MS and the MSC or SGSN is described in 3GPP TS 24.011 [29]. The Relay Protocol between the MSC or SGSN and the SMS-GMSC is described in 3GPP TS 29.002 [32]. The Relay Protocol between the SMS-GMSC and the SMSC is not standardised. Examples of this protocol are described in GSM TR 03.47 [39].

**Figure 7.8: MT SMS via MSC or SGSN**

### 7.5.4 Handling of mobile terminating SMS

#### 7.5.4.1 Handling of mobile terminating SMS in the terminating MSC or SGSN

A CAMEL Service may be invoked for the following Mobile Terminated short message types:

- Short Message Delivery (TPDU type = SMS-DELIVER)
- Short Message Status Report (TPDU type = SMS-STATUS-REPORT)

Refer to 3GPP TS 23.040 [14] for a description of the various TPDU types.

The functional behaviour of the terminating MSC or SGSN is specified in 3GPP TS 29.002 [32]. The procedures specific to CAMEL are specified in the following subclauses:

##### 7.5.4.1.1 Procedure CAMEL\_T\_SMS\_INIT;

This procedure is called when a Short Message delivery attempt is received from the SMS-GMSC. If MT-SMS-CSI is present for the subscriber, then the SMS\_SSF shall be invoked. Otherwise, the Short Message delivery attempt proceeds without CAMEL.

When the SMS\_SSF is invoked and the SMS\_SSF has requested the gsmSCF for instructions, the MSC or SGSN may receive the following responses from the SMS\_SSF:

- Int\_Continue\_SMS

The gsmSCF has indicated that SM delivery may proceed. It may have supplied the SMS\_SSF with a modified Calling Party Number. This Calling Party Number shall replace the TP-Originating-Address in the SMS-DELIVER TPDU.

- Int\_Release\_SMS

The gsmSCF has force-released SM delivery. The RP Cause received from the gsmSCF shall be conveyed to the SMS-GMSC in the RP-Cause component, in the RP-ERROR RPDU.

- Int\_Error

A Tssf time-out has occurred; the SM has not been forwarded to the Mobile Station. If Default SMS Handling equals 'Continue', the SM delivery proceeds. Otherwise, SM delivery shall be aborted. In the latter case, the RP-Cause component, in the RP-ERROR RPDU shall be set to EquipmentProtocolError, in accordance with 3GPP TS 29.002 [32].

#### 7.5.4.1.2 Procedure CAMEL\_T\_SMS\_DELIVERED

This procedure is called when the MSC or SGSN has detected that delivery of the SM to the Mobile Station has succeeded. No event specific information is sent to the gsmSCF.

When Short Message delivery attempt success has been reported to the gsmSCF, then the MSC or SGSN may receive the following responses from the SMS\_SSF:

- Int\_Continue\_SMS

The event was reported to the gsmSCF in interrupt mode. The gsmSCF has concluded CAMEL processing and has terminated the Service Logic.

- Int\_Continue

The event was not reported to the gsmSCF or was reported in notification mode.

- Int\_Error

A Tssf time-out has occurred.

In all the above cases, the SM processing in the MSC or SGSN continues.

#### 7.5.4.1.3 Procedure CAMEL\_T\_SMS\_FAILURE

This procedure is called when the MSC or SGSN has detected that delivery of the SM to the Mobile Station has failed. If the delivery failure is due to RP-ERROR RPDU received from the MS, then the MT SMS Cause in the event report to the gsmSCF shall be set to the RP-Cause component in the RP-ERROR-RPDU. Otherwise, if the delivery failure is due to internal failure in the MSC or SGSN or time-out from the MS, then the MT SMS Cause in the event report to the gsmSCF shall be set to "Protocol error, unspecified", as defined in 3GPP TS 24.011 [29].

When Short Message delivery attempt failure has been reported to the gsmSCF, then the MSC or SGSN may receive the following responses from the SMS\_SSF:

- Int\_Continue\_SMS

The event was reported to the gsmSCF in interrupt mode. The gsmSCF has concluded CAMEL processing and has terminated the Service Logic.

- Int\_Continue

The event was not reported to the gsmSCF or was reported in notification mode.

- Int\_Error

A Tssf time-out has occurred.

In all the above cases, the SM processing in the MSC or SGSN continues.

#### 7.5.4.1.4 Allocation of SMS Reference Number

During the CAMEL handling of a Mobile Terminating Short Message, the MSC or SGSN shall allocate an SMS Reference Number. This SMS Reference Number shall be placed in the SMS-MT Call Detail Record, together with the MSC Address or SGSN Number. This SMS Reference Number shall also be sent to the gsmSCF in the Initial DP SMS Information Flow, together with the MSC Address or SGSN Number. The combination of SMS Reference Number and MSC Address or SGSN Number forms a globally unique pair. This pair may be used for correlation of CDRs produced in the MSC or SGSN with CDRs produced in the gsmSCF.

An SMS Reference Number shall be generated and placed in the SMS-MT Call Detail Record, for every Short Message, including the case when a Short Message forms part of a set of concatenated Short Messages.

### Procedure CAMEL\_T\_SMS\_INIT

1(2)

/\* A procedure in the MSC or SGSN to perform CAMEL handling of mobile terminated SMS delivery request.\*/

/\* Signals to/from the right are to/from gsmSSF/gprsSSF (SMS\_SSF).\*/

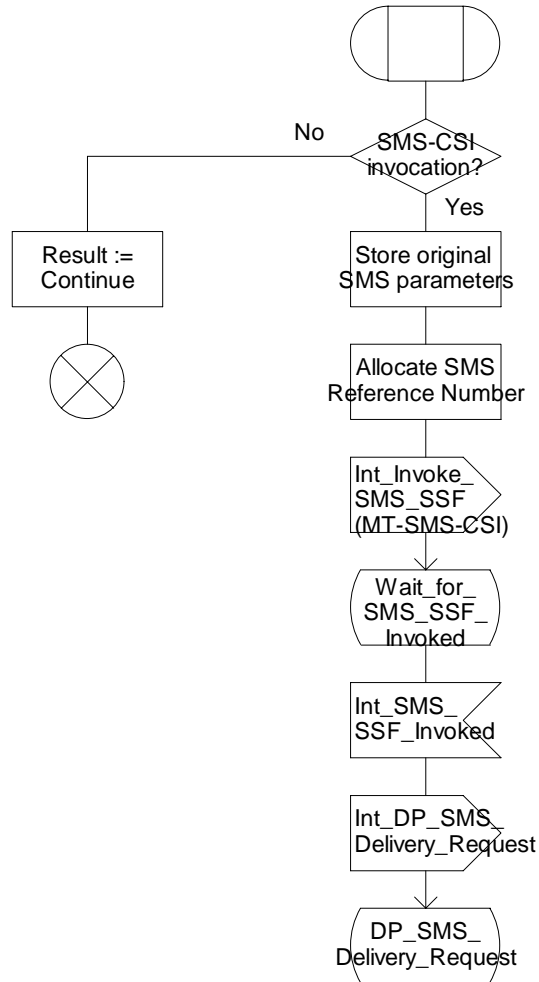

Figure 7.9a: Procedure CAMEL\_T\_SMS\_INIT (sheet 1)

### Procedure CAMEL\_T\_SMS\_INIT

2(2)

/\* A procedure in the MSC or SGSN to perform CAMEL handling of mobile terminated SMS delivery request.\*/

/\* Signals from the right are from gsmSSF/gprsSSF (SMS\_SSF).\*/

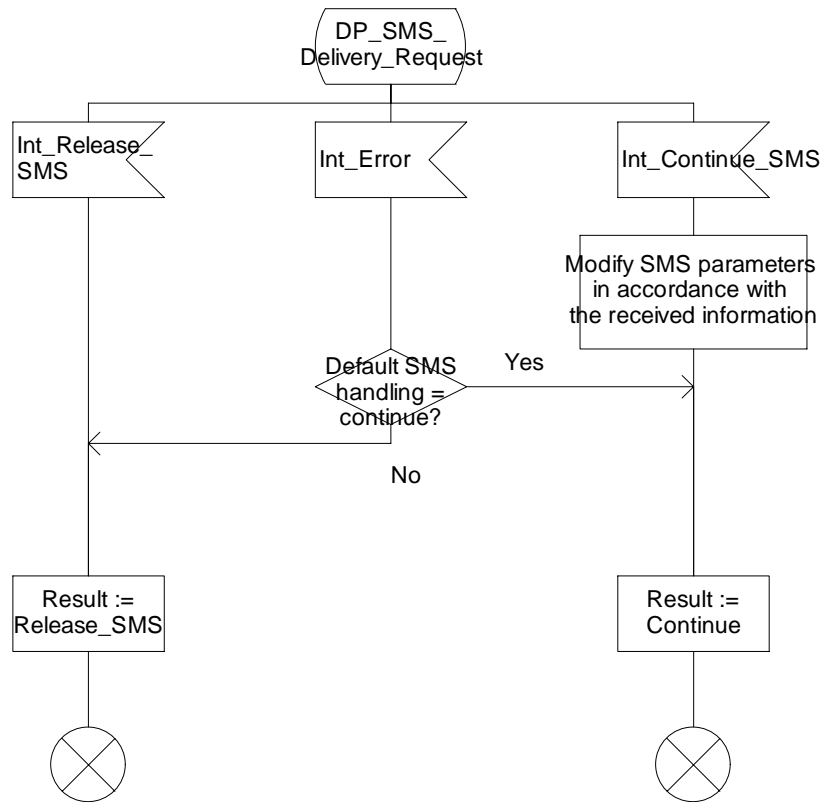

Figure 7.9b: Procedure CAMEL\_T\_SMS\_INIT (sheet 2)

### Procedure CAMEL\_T\_SMS\_FAILURE

1(1)

/\* Procedure in the MSC or SGSN  
to handle CAMEL notification to gsmSCF  
about unsuccessful delivery. \*/

/\* Signals to/from the right are to/from  
gsmSSF/gprsSSF (SMS\_SSF). \*/

Figure 7.10a: Procedure CAMEL\_T\_SMS\_FAILURE (sheet 1)

### Procedure CAMEL\_T\_SMS\_DELIVERED

1(1)

/\* Procedure in the MSC or SGSN (SMS\_SSF) to handle CAMEL notification to gsmSCF about successful delivery. \*/

/\* Signals to/from the right are to/from gsmSSF/gprsSSF (SMS\_SSF). \*/

Figure 7.11a: Procedure CAMEL\_T\_SMS\_DELIVERED (sheet 1)

#### 7.5.4.2 Handling of mobile terminating SMS in the VLR

The functional behaviour of the VLR is specified in 3GPP TS 29.002 [32]. The procedures specific to CAMEL are specified in the following procedures:

- Procedure CAMEL\_MT\_SMS\_VLR;
- Procedure CAMEL\_MT\_SMS\_CHECK\_VLR.

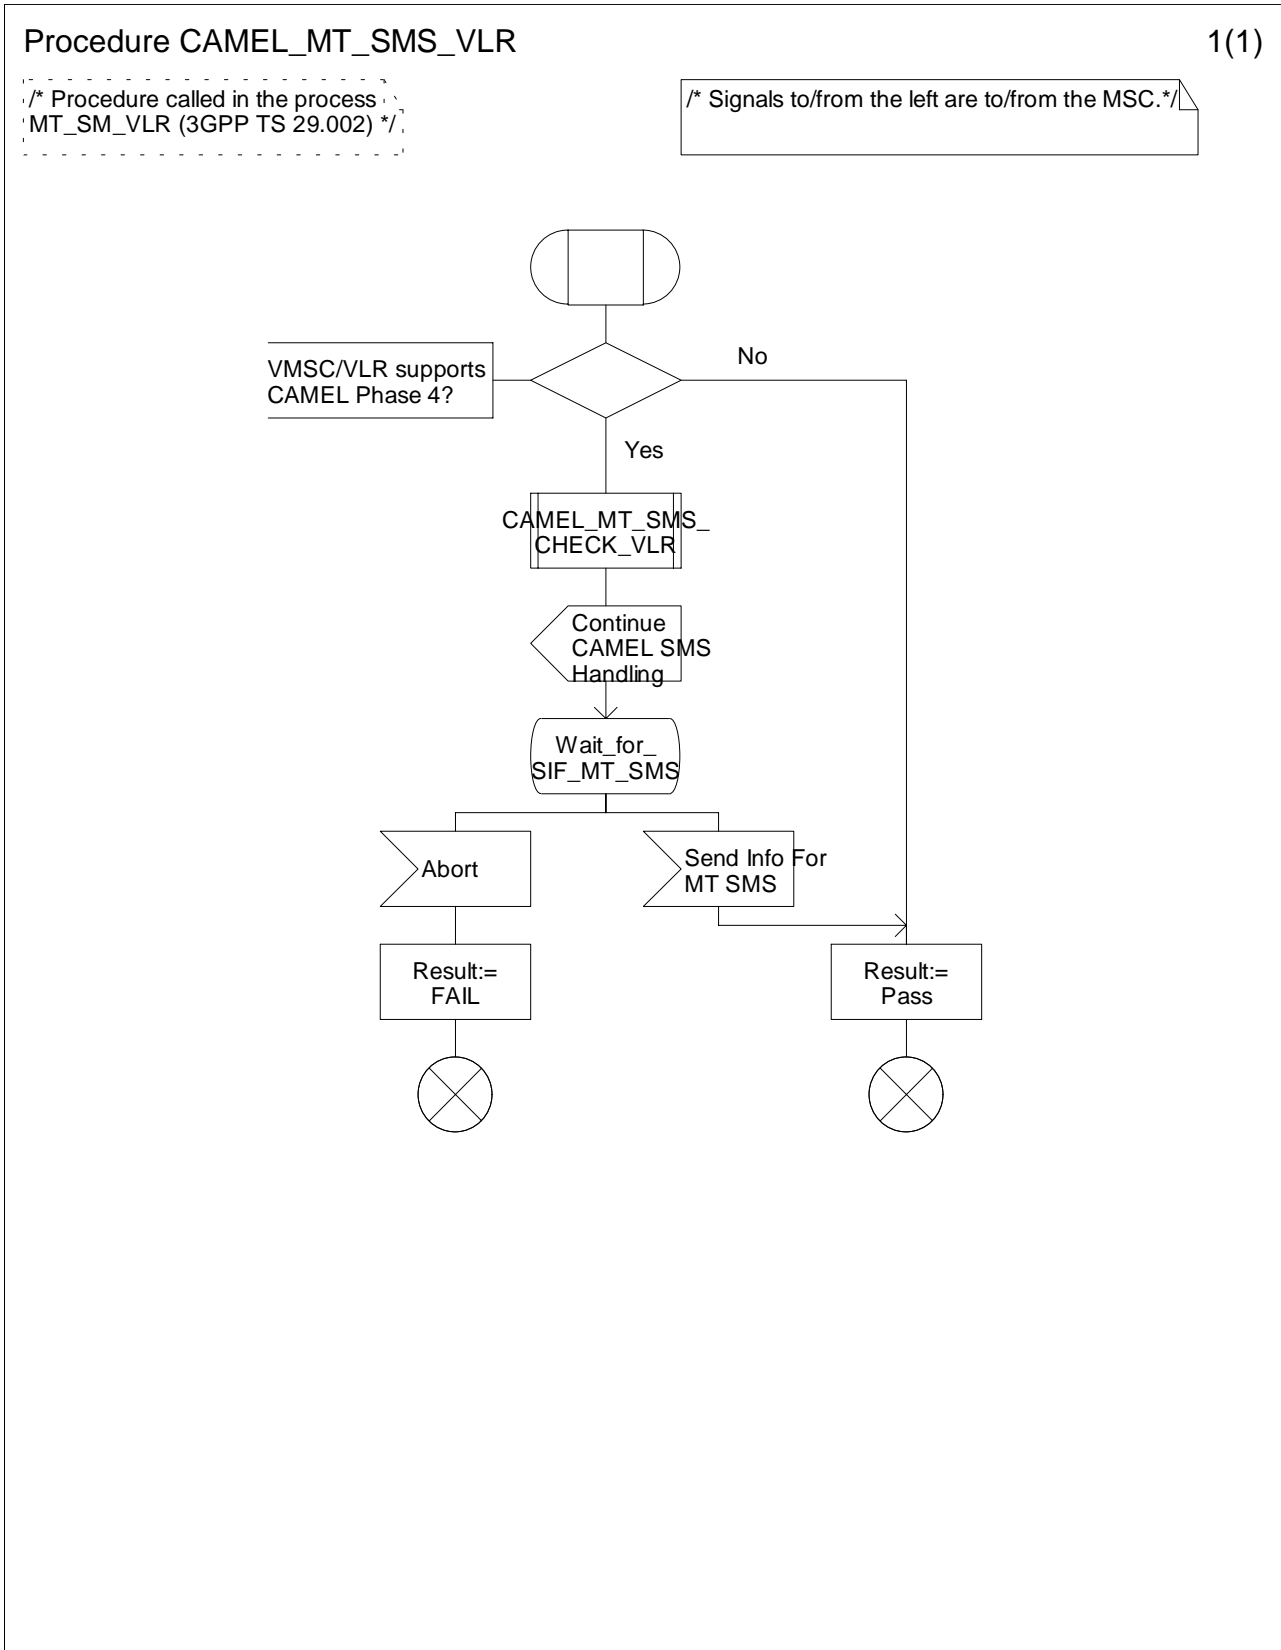

Figure 7.12a: Procedure CAMEL\_MT\_SMS\_VLR (sheet 1)

### Procedure CAMEL\_MT\_SMS\_CHECK\_VLR

1(1)

/\* Procedure in the VLR to check the MT-SMS-CSI and set the MT-SMS-CSI parameter for SEND INFO MT SMS ack accordingly. \*/

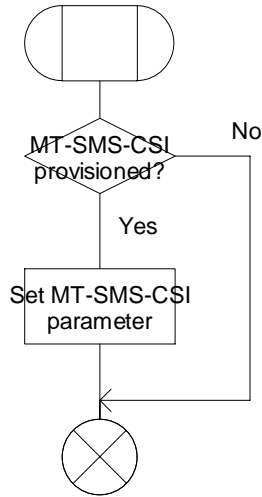

Figure 7.13a: Procedure CAMEL\_MT\_SMS\_CHECK\_VLR (sheet 1)

## 7.5.5 Handling of mobile originating and mobile terminating SMS in the gsmSSF or gprsSSF

### 7.5.5.1 Process SMS\_SSF

- Sheet 1 The Int\_Invoke SMS\_SSF signal dictates which TDP shall be armed. For a Mobile Originated SMS service, the SMS\_Collected\_Info TDP shall be armed. For a Mobile Terminated SMS service, the SMS\_Delivery\_Request TDP shall be armed.
- Sheet 2 The Int\_SMS\_Failure signal may be received only for a MO-SMS service. It is received when a MS detach event occurs before the SMS\_SSF is invoked.
- Sheet 3 The SMSC Address and Destination Subscriber Number may be received in CAP ConnectSMS only for a MO-SMS service.
- Sheet 4: For a MO-SMS service, the following events may be armed or disarmed: O\_SMS\_Submission, O\_SMS\_Failure. For a MT-SMS service, the following events may be armed or disarmed: T\_SMS\_Delivery, T\_SMS\_Failure.
- Sheet 5: For a MO-SMS service, the gsmSCF may place free-format charging data in the 'MOSMSRecord' CDR (in the MSC) or in the S-SMO-CDR (in the SGSN).
- For a MT-SMS service, the gsmSCF may place free-format charging data in the 'MTSMSRecord' (in the MSC) or in the S-SMT-CDR (in the SGSN).
- Refer to 3GPP TS 32.005 [34] and 3GPP TS 32.015 [35] for a description of these CDR types.
- Sheet 6: The Int\_SMS\_Failure signal in state Waiting\_For\_Instructions may be received for a MO-SMS service only. It is received when a MS detach event occurs before the gsmSCF has given instruction to continue SM processing.
- Sheet 7: When the SM submission or failure event occurs, both MO-SMS events shall be disarmed.
- When the SM delivery or failure event occurs, both MT-SMS events shall be disarmed.

### 7.5.5.2 Process Complete\_SMS\_FCI\_Record

- Sheet 1: For a MO-SMS service, the 'MOSMSRecord' or 'S-SMO-CDR' shall be closed. For a MT-SMS service, the 'MTSMSRecord' or 'S-SMT-CDR' shall be closed.

# Process SMS\_SSF

1(7)

/\* Process to handle MO/MT SMS.  
Locates either in the gsmSSF or gprsSSF.\*/

/\* Signals to/from the left are to/from MSC or SGSN; signals to/from the right are to/from the gsmSCF, unless otherwise stated.\*/

/\*

## 7.6 Description of information flows

This subclause contains the detailed description of the information flows used by CAMEL for SMS control.

Each Information Element (IE) is marked as Mandatory (M), Conditional (C), Optional (O), Specific conditions (S), mutually Exclusive (E), or not applicable (-) for each different traffic case: Mobile Originating SMS (MO) and Mobile Terminating SMS (MT).

An 'M' IE shall always be included. A 'C' IE shall be included if the sending entity has the necessary information to populate the IE. The conditions for the inclusion of an 'S' IE are shown in the 'Description' column of the definition table. When a set of 'E' IEs is shown in the definition of an Information Flow or compound IE, only one of those IEs may be included. An 'O' IE may be included or omitted as required by the service logic. A '-' IE shall always be omitted. This categorization is a functional classification, i.e. it defines the requirements for the stage 2 information. It is not a stage 3 classification to be used for the ASN.1 syntax of the protocol.

The distinction between MO and MT SMS applies only to the Information Flows between the gsmSCF and the gsmSSF or gprsSSF.

Details of errors and exceptions to these rules are specified in 3GPP TS 29.002 [32], TS 29.078 [33].

### 7.6.1 gsmSSF or gprsSSF to gsmSCF information flows

#### 7.6.1.1 Event Report SMS

##### 7.6.1.1.1 Description

This IF is used to notify the gsmSCF of an event previously requested by the gsmSCF in a Request Report SMS Event IF.

##### 7.6.1.1.2 Information Elements

Information element name	MO	MT	Description
Event Type	M	M	This IE specifies the type of event that is reported.
Event Specific Information	C	C	This IE indicates the SMS related information specific to the event.
Misc SMS Info	M	M	This IE indicates the DP type.

If the Event Type IE indicates O\_SMS\_Failure, then the Event Specific Information contains the following information element:

Information element name	MO	MT	Description
MO_SMS Cause	M	-	This IE indicates the reason of submission failure.

If the Event Type IE indicates T\_SMS\_Failure, then the Event Specific Information contains the following information elements:

Information element name	MO	MT	Description
MT_SMS Cause	-	M	This IE indicates the reason of delivery failure.

If the Event Type IE indicates O\_SMS\_Submitted or T\_SMS\_Delivered, then no Event Specific Information shall be sent to the gsmSCF.

#### 7.6.1.2 Initial DP SMS

##### 7.6.1.2.1 Description

This IF is generated by the gsmSSF or gprsSSF when a trigger is detected at a DP in the state model, to request instructions from the gsmSCF.

## 7.6.1.2.2 Information Elements

Information element name	MO	MT	Description
Destination Subscriber Number	M	-	This IE contains a number to identify the Destination short message entity. The Destination Subscriber Number shall be retrieved from the TP-Destination-Address in the SMS-SUBMIT TPDU or the SMS-COMMAND TPDU.
Called Party Number	-	M	This IE contains a number to identify the subscriber for whom the Short Message is destined. The Called Party Number shall be the MSISDN of the served subscriber.
Calling Party Number	M	C	For MO SMS: This IE contains a number to identify the subscriber who requests the SM submission. The Calling Party Number shall be the MSISDN of the served subscriber. For MT SMS: This IE contains the address of the submitter of the short message. For SMS-DELIVER TPDU, the Calling Party Number shall be retrieved from the TP-Originating-Address in the SMS-DELIVER TPDU. For SMS-STATUS-REPORT TPDU, this element shall not be included in this IF.
Event Type	M	M	This IE indicates the armed event resulting in the Initial DP SMS IF.
IMSI	M	M	This IE identifies the mobile subscriber.
Location Information In MSC	C	C	This IE is described in a table below.
Location Information In SGSN	C	C	This IE is described in a table below.
Service Key	M	M	This IE indicates to the gsmSCF the requested CAMEL Service. It is used to address the required application/SLP within the gsmSCF.
Time And Timezone	M	M	This IE contains the time that the gsmSSF or gprsSSF was triggered, and the time zone the gsmSSF or gprsSSF resides in.
TP Short Message Specific Information	M	M	This IE contains the first octet of the applicable TPDU. For SMS-SUBMIT, the following elements may be included: - Message Type Indicator - Reject Duplicates - Validity Period Format - Status Report Request - User Data Header Indicator - Reply Path For SMS-COMMAND, the following elements may be included: - Message Type Indicator - User Data Header Indicator - Status Report Request For SMS-DELIVER, the following elements may be included: - Message Type Indicator - More Messages to Send - Status Report Indication - User Data Header Indicator - Reply Path For SMS-STATUS-REPORT, the following elements may be included: - Message Type Indicator - More Messages to Send - Status Report Qualifier - User Data Header Indicator Refer to 3GPP TS 23.040 [14] for an indication of which elements of this 1 <sup>st</sup> octet are Mandatory and which elements are Conditional.
TP Protocol Identifier	M	C	This IE indicates the protocol used above SM-Transfer Layer. The TP Protocol Identifier shall be retrieved from the applicable TPDU. For SMS-STATUS-REPORT, the sending of this IE is Conditional, depending on its presence in the SMS-STATUS-REPORT TPDU.
TP Data Coding Scheme	C	M	This IE indicates the data coding scheme of the TP-User Data field, and may indicate a message class. The message class may indicate e.g. the originator of the Short Message. The TP Data Coding Scheme shall be retrieved from the applicable TPDU. For SMS-COMMAND, this IE shall not be included in this IF.
TP Validity Period	S	-	This IE indicates the length of the validity period or the absolute time of the validity period termination. This IE is used only for the SMS-SUBMIT TPDU. The TP Validity Period, if available, shall be retrieved from the SMS-SUBMIT TPDU.

Information element name	MO	MT	Description
			For other TPDU, this IE shall not be included in this IF.
SMSC Address	M	M	For MO SMS: This IE defines the address of the SMSC to which the MO short message is intended to be submitted. It shall be retrieved from the RP-Destination-Address in the RP-MO-DATA RPDU. For MT SMS: This IE identifies the address of the SMSC from which the MT short message is originating. It shall be retrieved from the RP-Originating-Address in the RP-MT-DATA RPDU.
SMS Reference Number	M	M	This IE carries the SMS Reference Number. This Reference Number is allocated by the MSC or SGSN that processes the Short Message. It may be used by the gsmSCF for inclusion in a gsmSCF SMS record.
MSC Address	S	S	This IE carries the E.164 MSC Address. This IE shall be present if the Short Message processing takes place in an MSC. Otherwise shall be absent.
SGSN Number	S	S	This IE carries the Global Title of the SGSN. See 3GPP TS 23.060 [15]. This IE shall be present if the Short Message processing takes place in an SGSN. Otherwise shall be absent.
GPRS MS Class	C	-	This IE contains the MS network and radio access capabilities if the short message is being transferred through an SGSN.
MS Classmark 2	C	-	This IE contains the MS classmark 2 if the short message is being transferred through an MSC.
IMEI (with software version)	C	-	This IE contains the IMEISV (as defined in 3GPP TS 23.003 [7]) of the ME in use by the served subscriber.
Note: Refer to 3GPP TS 23.040 [14] for a description and encoding of the various TP-DUs and RP-DUs.			

Location Information in MSC is based on the Location Information IE defined in 3GPP TS 23.018 [12]. The following differences apply:

Information element name	MO	MT	Description
Location number	C	C	See 3GPP TS 23.018 [12].
VLR number	M	M	See 3GPP TS 23.018 [12].
Age of location information	-	M	See 3GPP TS 23.018 [12].
Current Location Retrieved	-	-	Not applicable
Selected LSA Identity	S	S	This IE is applicable only if SoLSA is supported by the MSC. This IE indicates the LSA identity associated with the current position of the MS. It shall be present if the LSA ID in the subscriber data matches the LSA ID of the current cell. In the case of multiple matches the LSA ID with the highest priority shall be present. See 3GPP TS 23.073 [17].

Location Information in SGSN is based on the Location Information For GPRS IE defined in the subclause 11.3.6.1.2. The following differences and clarifications apply:

Information element name	MO	MT	Description
Service area ID	C,E	C,E	
Cell ID	C,E	C,E	
Location area ID	C,E	C,E	
Routeing area ID	C	C	
Geographical information	C	C	
Geodetic information	-	-	Not applicable
Age of location information	-	-	Not applicable
Current Location Retrieved	-	-	Not applicable

## 7.6.2 gsmSCF to gsmSSF or gprsSSF information flows

### 7.6.2.1 Connect SMS

#### 7.6.2.1.1 Description

This IF is used to request the gsmSSF or gprsSSF to perform the actions to route the Short Message to a specific destination (for MO SMS) or to deliver the Short Message to the MS (for MT SMS).

#### 7.6.2.1.2 Information Elements

Information element name	MO	MT	Description
Calling Partys Number	O	O	This IE indicates the subscriber who sent the SMS; possibly changed by the gsmSCF. If the Short Message type is SMS-SUBMIT or SMS-COMMAND, then this IE, if present, it shall replace the RP-Originating-Address in the RP-MO-DATA RPDU (CHOICE set to MSISDN). If the Short Message type is SMS-DELIVER, then this IE, if present, shall replace the TP-Originating-Address in the SMS-DELIVER TPDU. If the Short Message type is SMS-STATUS-REPORT, then this IE, if present, shall be ignored.
Destination Subscriber Number	O	-	This IE identifies the Destination short message entity; possibly changed by the gsmSCF. This IE, if present, shall replace the TP-Destination-Address in the SMS-SUBMIT TPDU or SMS-COMMAND-TPDU.
SMSC Address	O	-	This IE indicates the SMSC address to which the MO short message shall be submitted; possibly changed by the gsmSCF. This IE, if present, shall replace the RP-Destination-Address in the RP-MO-DATA RPDU (CHOICE set to serviceCentreAddressDA).

### 7.6.2.2 Continue SMS

#### 7.6.2.2.1 Description

This information flow requests the gsmSSF or gprsSSF to proceed normally. The gsmSSF or gprsSSF completes DP processing, and continues with the SMS handling.

#### 7.6.2.2.2 Information Elements

This IF contains no information elements.

### 7.6.2.3 Furnish Charging Information SMS

#### 7.6.2.3.1 Description

This IF is used to request the gsmSSF or gprsSSF to include information in the CAMEL specific logical MO SMS or MT SMS record.

The logical call record is created when FCI-SMS is received and a logical call record for that short message does not exist. For modelling purposes the logical call record is buffered in the gsmSSF or gprsSSF. The gsmSSF or gprsSSF completes logical call records as defined in the SDLs. Once the logical call record is completed, then its free format data are moved to the corresponding CDR and the logical call record is deleted.

The gsmSCF can send multiple concatenated FCIs per Short Message for completion. The total maximum of free format data is 160 octets per SM. The 160 octets may be sent in one or more FCI IFs. If there are incomplete free format data and new FCI IFs is/are received to overwrite the incomplete data, then the incomplete data are discarded and the gsmSCF can send another 160 octets per SM.

### 7.6.2.3.2 Information Elements

Information element name	MO	MT	Description
FCI Billing Charging Characteristics	M	M	This IE is described in a table below.

FCI Billing Charging Characteristics contains the following information element:

Information element name	MO	MT	Description
FCIBCCCAMEL Sequence 1	M	M	This IE is described in a table below.

FCIBCCCAMEL Sequence 1 contains the following information elements:

Information element name	MO	MT	Description
Free Format Data	M	M	This IE contains free format data to be inserted in the CAMEL logical call record.
Append Free Format Data	O	O	This IE indicates that the gsmSSF or gprsSSF shall append the free format data to the Logical MO SMS or MT SMS record. <ul style="list-style-type: none"> <li>- If this IE is present indicating "Append", the gsmSSF or gprsSSF shall append the free format data received in this IF to the free format data already present in the Logical MO SMS or MT SMS record.</li> <li>- If this IE is absent or indicates "Overwrite", then the gsmSSF shall overwrite all free format data already present in the Logical MO SMS or MT SMS record, by the free format data received in this IF.</li> </ul> If no Logical MO SMS or MT SMS record exists yet, then the gsmSSF or gprsSSF shall ignore this IE.

### 7.6.2.4 Release SMS

#### 7.6.2.4.1 Description

This IF is used to tear down by the gsmSCF an existing SMS transfer.

#### 7.6.2.4.2 Information Elements

Information element name	MO	MT	Description
RP Cause	M	M	SMS Cause. Indicates the SMS specific cause of the release. The cause is reported to the MS (in the case of MO SMS) or SMSC (in the case of MT SMS). For MO SMS, the RP Cause value shall be used to set the RP-Cause in the RP-ERROR RPDU sent to the MS. 3GPP TS 24.011 [29] specifies which RP-Cause values may be sent to the MS. For MT SMS, the RP Cause value shall be used to set the RP-Cause in the RP-ERROR RPDU sent to the SMSC. 3GPP TS 29.002 [32] specifies which RP-Cause values may be sent to the SMSC.

### 7.6.2.5 Request Report SMS Event

#### 7.6.2.5.1 Description

This IF is used to request the gsmSSF or gprsSSF to monitor for an event and to send a notification to the gsmSCF when the event is detected (see Event Report SMS IF).

#### 7.6.2.5.2 Information Elements

Information element name	MO	MT	Description
SMS Event	M	M	This IE specifies the event or events of which a report is requested.

SMS Event contains the following information elements:

Information element name	MO	MT	Description
Event Type	M	M	This IE specifies the type of event of which a report is requested.
Monitor Mode	M	M	This IE indicates how the event shall be reported.

## 7.6.2.6 Reset Timer SMS

### 7.6.2.6.1 Description

This IF is used to refresh a gsmSSF or gprsSSF timer.

### 7.6.2.6.2 Information Elements

Information element name	MO	MT	Description
Timer Value	M	M	This IE specifies the value to which the indicated timer shall be set.
Timer ID	O	O	This IE indicates which timer shall be reset. It shall be set to 'Tssf'.

## 7.6.3 HLR to VLR or SGSN information flows

### 7.6.3.1 Delete Subscriber Data

#### 7.6.3.1.1 Description

This IF is used by the HLR to delete CAMEL subscription data from a VLR or SGSN. It is specified in 3GPP TS 29.002 [32]

#### 7.6.3.1.2 Information Elements

The Delete Subscriber Data IF contains the following CAMEL specific information elements:

Information element name	Status	Description
CAMEL Subscription Info Withdraw	O	This IE identifies that all CSIs shall be deleted from the subscriber data in VLR or SGSN.
Specific CSI Withdraw	O	This IE is used to indicate that only MO-SMS-CSI or MT-SMS-CSI shall be deleted from the VLR or SGSN. This IE should not be present when CAMEL Subscription Info Withdraw is present.

### 7.6.3.2 Insert Subscriber Data

#### 7.6.3.2.1 Description

This IF is used by the HLR to insert subscriber data in the VLR or SGSN. It is specified in 3GPP TS 29.002 [32].

#### 7.6.3.2.2 Information Elements

The Insert Subscriber Data contains the following CAMEL specific information elements:

Information element name	Status	Description
MO-SMS-CSI	O	This IE identifies the subscriber as having MO SMS CAMEL services.
MT-SMS-CSI	O	This IE identifies the subscriber as having MT SMS CAMEL services.

MO-SMS-CSI contains the following information elements:

Information element name	Status	Description
gsmSCF Address	M	See subclause 7.3.1.1.
Service Key	M	See subclause 7.3.1.2.
Default SMS Handling	M	See subclause 7.3.1.3.
CAMEL Capability Handling	M	See subclause 7.3.1.5.
SMS Triggers	M	See subclause 7.3.1.4. It includes the following trigger: SMS_Collected_Info

MT-SMS-CSI contains the following information elements:

Information element name	Status	Description
gsmSCF Address	M	See subclause 7.3.2.1.
Service Key	M	See subclause 7.3.2.2.
Default SMS Handling	M	See subclause 7.3.2.3.
CAMEL Capability Handling	M	See subclause 7.3.2.6.
SMS Triggers	M	See subclause 7.3.2.4. It includes the following trigger: SMS_Delivery_Request.
SMS Trigger Criteria	C	See subclause 7.3.2.5.

## 7.6.4 VLR or SGSN to HLR information flows

### 7.6.4.1 Insert Subscriber Data ack

See subclause 4.6.8.1. This information flow is sent by the VLR.

### 7.6.4.2 Update Location

See subclause 4.6.8.3.

### 7.6.4.3 Update GPRS Location

#### 7.6.4.3.1 Description

This IF is used by the SGSN to indicate to the HLR the CAMEL phases and CAMEL phase 4 subsets supported by the SGSN. It is specified in 3GPP TS 29.002 [32].

#### 7.6.4.3.2 Information Elements

Update GPRS location contains the following CAMEL specific information element:

Information element name	Status	Description
Supported CAMEL Phases	S	This IE indicates which CAMEL phases are supported by the SGSN. The SGSN may indicate support of CAMEL phase 3 or higher. It shall be present when the SGSN supports CAMEL.
Supported CAMEL4 Subsets	S	This IE indicates the CAMEL phase 4 subsets supported in the SGSN. It shall be present if the "Supported CAMEL Phases" IE contains support of CAMEL phase 4.

## 7.6.5 VLR to MSC Information Flows

### 7.6.5.1 Continue CAMEL SMS Handling

#### 7.6.5.1.1 Description

This IF is used to instruct the MSC to continue the CAMEL specific handling.

### 7.6.5.1.2 Information Elements

Information element name	Status	Description
MT-SMS-CSI	M	This IE contains the CAMEL Subscription Information for MT SMS.
IMSI	M	IMSI of the served subscriber.
MSISDN	M	MSISDN of the served subscriber.

### 7.6.5.2 Send Info For MO SMS ack

#### 7.6.5.2.1 Description

This IF is used to transport MO SMS related subscription data from the VLR to the MSC. It is specified in 3GPP TS 29.002 [32].

#### 7.6.5.2.2 Information Elements

Information element name	Status	Description
MO-SMS-CSI	C	This IE contains the CAMEL Subscription Information for MO SMS.
ODB Data	C	This IE contains ODB data. This information is used to apply ODB for a reconnected Short Message, if needed.
CB SS Data	C	This IE contains CB SS data. This information is used to apply CB for a reconnected Short Message, if needed.

## 7.6.6 MSC to VLR Information Flows

### 7.6.6.1 Send Info For MT SMS

#### 7.6.6.1.1 Description

This IF is described in 3GPP TS 29.002 [32]; it is used to request the VLR to provide information to handle an MT SMS.

#### 7.6.6.1.2 Information Elements

Send Info For MT SMS contains the following CAMEL specific information element:

Information element name	Status	Description
Suppress MT-SMS-CSI	S	This IE indicates to the VLR that it shall not return MT-SMS-CSI to the MSC. This IE shall not be present in the first interrogation; it shall be present in the second interrogation.

## 8 SS Notifications

### 8.1 Architecture

#### 8.1.1 Functional Entities used for CAMEL

This subclause describes the functional architecture needed to support Supplementary Service (SS) Notifications. Figure 8.1 shows the functional entities involved in sending SS Notifications. The architecture is applicable to the third phase of CAMEL or higher.

**Figure 8.1: Functional architecture for support of SS Notifications**

**HLR:** For subscribers requiring CAMEL support, the HLR stores the information relevant to the current subscription regarding SS-CSI. The SS-CSI is sent to the VLR at Location Update, on Data Restoration or if the SS-CSI is updated by administrative action. When processing an invocation of the CCBS supplementary service, the HLR shall send a notification of the invocation of the supplementary service to the gsmSCF if required by the SS-CSI.

**MSC:** When processing an invocation of any of the supplementary services ECT, CD and MPTY, the MSC may receive an SS-CSI from the VLR, indicating that a notification of the invocation of the supplementary service shall be sent to the gsmSCF.

**VLR:** The VLR stores the SS-CSI as a part of the subscriber data for subscribers roaming in the VLR area.

**gsmSCF:** The gsmSCF receives the SS Invocation Notification from the MSC or HLR.

#### 8.1.2 Interfaces defined for SS Notifications

This subclause describes the different interfaces applicable to SS Notifications. It specifies on a high level the functions specific to SS Notifications.

##### 8.1.2.1 MSC - gsmSCF interface

This interface is used by the MSC to send supplementary service invocation notifications to the gsmSCF. The SS invocations that can be notified to the gsmSCF via this interface are Call Deflection (CD), Explicit Call Transfer (ECT) and Multi Party (MPTY).

##### 8.1.2.2 HLR - gsmSCF interface

This interface is used by the HLR to send supplementary service invocation notifications to the gsmSCF. The SS invocation that can be notified to the gsmSCF via this interface is Call Completion to Busy Subscriber (CCBS).

### 8.1.2.3 VLR - MSC interface

This interface is used by the VLR to transfer SS-CSI to the MSC.

### 8.1.2.4 HLR-VLR interface

This interface is used by the HLR to send the SS-CSI to the VLR or to remove SS-CSI from the VLR.

## 8.2 Description of CAMEL Subscriber Data

### 8.2.1 Supplementary Service Invocation Notification CAMEL Subscription Information (SS-CSI)

This subclause defines the contents of the Supplementary Service Invocation Notification CAMEL Subscription Information (SS-CSI).

#### 8.2.1.1 Notification criteria

This data indicates for which supplementary services notifications shall be sent. The supplementary services which may be indicated are ECT, CD, CCBS and MPTY.

#### 8.2.1.2 gsmSCF address

Address to be used to access the gsmSCF for a particular subscriber. The address shall be an E.164 number to be used for routing.

#### 8.2.1.3 CSI state

The CSI state indicates whether the SS-CSI is active or not.

#### 8.2.1.4 Notification flag

The notification flag indicates whether the change of the SS-CSI shall trigger Notification on Change of Subscriber Data or not.

### 8.2.2 gsmSCF address list for CSI

The gsmSCF address list indicates a list of gsmSCF addresses to which Notification on Change of Subscriber Data is to be sent. This list is common to all CSI.

## 8.3 Procedures for CAMEL

### 8.3.1 Handling of Supplementary Service Invocation Notification

At the invocation of any of the services ECT, CD and MPTY the VLR checks whether the criteria for sending a notification are fulfilled, i.e. whether the subscriber is provisioned with the SS-CSI and the particular invoked supplementary service is marked in the SS-CSI. If this is the case a notification is sent to the gsmSCF given by the gsmSCF address contained in the SS-CSI. The processing of the particular SS invocation is not suspended. If the notification criteria are not fulfilled the processing of the particular supplementary service continues unchanged and no notification is sent.

The sending of the notification is independent of call related CAMEL processing, i.e. processing indicated by O/D/T/VT-CSI.

On invocation of ECT, the VLR shall include the SS-CSI in the Invoke ECT response message (see Process MAF027 in 3GPP TS 23.091 [24]) to the MSC if applicable for ECT.

On invocation of MPTY, the VLR shall include the SS-CSI in the Process MPTY message (see Process MPTY\_MAF026 in 3GPP TS 23.084 [20]) to the MSC if applicable for MPTY.

On invocation of CD, the VLR shall include the SS-CSI in the Send Info For Incoming Call ack information flow to the MSC if applicable to CD (see 3GPP TS 23.072 [16]).

When a subscriber activates a CCBS request, the HLR checks whether the criteria for sending a notification are fulfilled, i.e. whether

- The subscriber is provisioned with an active SS-CSI, and
- CCBS is marked in the SS-CSI.

If the criteria are fulfilled, a notification is immediately sent to the gsmSCF given by the gsmSCF address contained in the SS-CSI and the processing of the CCBS request continues. Whenever the state of the CCBS request changes (see 3GPP TS 23.093 [25]), an additional notification is immediately sent to the gsmSCF and the processing of the CCBS request continues.

If the criteria are not fulfilled, the processing of the CCBS request continues unchanged and no notifications are sent.

At the invocation of the CCBS supplementary service, the HLR checks whether the criteria for sending a notification are fulfilled, i.e. whether the subscriber is provisioned with the SS-CSI and the particular invoked supplementary service is marked in the SS-CSI. If this is the case, a notification is sent to the gsmSCF given by the gsmSCF address contained in the SS-CSI. The processing of the SS invocation is not suspended. If the notification criteria are not fulfilled the processing of the particular supplementary service continues unchanged and no notification are sent.

## 8.4 Description of information flows

This subclause contains the detailed description of the information flows used by CAMEL for notification of Supplementary Service invocation.

Each Information Element (IE) is marked as Mandatory (M), Specific conditions (S) or Optional (O).

An 'M' IE shall always be included. The conditions for the inclusion of an 'S' IE are shown in the 'Description' column of the definition table. An 'O' IE may be included or omitted as required by the service logic. This categorization is a functional classification, i.e. it defines the requirements for the stage 2 information. It is not a stage 3 classification to be used for the ASN.1 syntax of the protocol.

The following principles apply for the handling of the IEs by the receiving entity:

- The gsmSCF may silently discard any IE which it does not functionally support.

Details of errors and exceptions to these rules are specified in 3GPP TS 29.002 [32].

### 8.4.1 MSC to gsmSCF information flows

#### 8.4.1.1 SS Invocation Notification

##### 8.4.1.1.1 Description

This IF is generated by the MSC when it shall notify the gsmSCF of a supplementary service invocation.

### 8.4.1.1.2 Information Elements

Information element name	Status	Description
Notification Event	M	This IE indicates the supplementary service invocation, resulting in the SS Invocation Notification IF. Only the following supplementary services are allowed: Explicit Call Transfer, Call Deflection, Multi Party.
Notification Event Specific Information	S	In the case of ECT, the sending entity shall include the called party for each call originated by the subscriber and relevant to the ECT invocation. Note: the subscriber may have originated zero, one or two calls relevant to the ECT service. In the case of CD, the deflected to number shall be included in this IE. In the case of MPTY, this IE shall be omitted.
IMSI	M	This IE identifies the mobile subscriber who has invoked the supplementary service to be notified.
MSISDN	M	This IE identifies the mobile subscriber who has invoked the supplementary service to be notified.

## 8.4.2 HLR to VLR information flows

### 8.4.2.1 Delete Subscriber Data

#### 8.4.2.1.1 Description

This IF is used by the HLR to delete CAMEL subscription data from a VLR. It is specified in 3GPP TS 29.002 [32].

#### 8.4.2.1.2 Information Elements

The Delete Subscriber Data IF contains the following CAMEL specific information elements for SS Notifications:

Information element name	Status	Description
CAMEL Subscription Info Withdraw	O	This IE identifies that all CSIs shall be deleted from the subscriber data in the VLR.
Specific CSI Withdraw	O	This IE is used to indicate that only SS-CSI shall be deleted from the VLR. This IE should not be present when CAMEL Subscription Info Withdraw is present.

### 8.4.2.2 Insert Subscriber Data

#### 8.4.2.2.1 Description

This IF is used by an HLR to update a VLR with certain subscriber data. This IF is specified in 3GPP TS 29.002 [32].

#### 8.4.2.2.2 Information Elements

The Insert Subscriber Data contains the following CAMEL specific information element for SS Notifications:

Information element name	Status	Description
SS-CSI	O	This IE is described in subclause 8.2.1. This IE identifies the subscriber as having supplementary service invocation notification services. It contains the Notification Criteria and gsmSCFAddress. When SS-CSI is sent to the VLR, it shall not contain a marking for CCBS.

## 8.4.3 HLR to gsmSCF information flows

### 8.4.3.1 SS Invocation Notification

This IF is generated by the HLR when it shall notify the gsmSCF of a supplementary service invocation.

### 8.4.3.1.2 Information Elements

Information element name	Status	Description
Notification Event	M	This IE indicates the supplementary service invocation, resulting in the SS Invocation Notification IF. Only the following supplementary services are allowed: Completion of Calls to Busy Subscriber
IMSI	M	This IE identifies the mobile subscriber who has invoked the supplementary service to be notified.
MSISDN	M	This IE identifies the mobile subscriber who has invoked the supplementary service to be notified.
B- Number	M	This IE indicates the destination address of the CCBS request.
CCBS Request State	M	This IE identifies the current state of the CCBS request. It can be one of: - Request; - Recall; - Active; - Completed; - Suspended; - Frozen; - Deleted.

## 8.4.4 VLR to MSC information flows

### 8.4.4.1 Invoke SS result

#### 8.4.4.1.1 Description

This IF is used by the VLR to send SS-CSI to the MSC. This IF is specified in 3GPP TS 29.002 [32].

#### 8.4.4.1.2 Information Elements

The Invoke SS result contains the following CAMEL specific information element for SS Notifications:

Information element name	Status	Description
SS-CSI	C	This IE is included when it is available in the VLR and either ECT or MPTY has been successfully invoked and that supplementary service has been marked for notification.

### 8.4.4.2 Send Info For Incoming Call ack

#### 8.4.4.2.1 Description

This IF is used by the VLR to send SS-CSI to the MSC. This IF is specified in 3GPP TS 23.018 [12].

#### 8.4.4.2.2 Information Elements

The Send Info For Incoming Call ack contains the following CAMEL specific information elements for SS Notifications:

Information element name	Status	Description
SS-CSI	S	This IE is included when it is available in the VLR and CD has been successfully invoked and that supplementary service has been marked for notification.

## 9 Mobility Management

### 9.1 Architecture

#### 9.1.1 Functional Entities used for CAMEL

This subclause describes the functional architecture required to support Mobility Management in CAMEL. Figures 9.1a and 9.1b show the functional entities involved in CAMEL support of Mobility Management. The architecture in the figure 9.1a is applicable to the third phase of CAMEL or higher and the architecture in the figure 9.1b is applicable to the fourth phase of CAMEL.

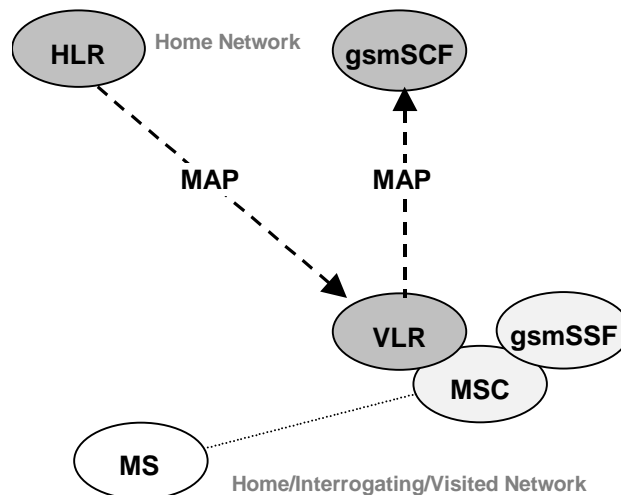

Figure 9.1a: Functional architecture for CS subscriber support of CAMEL

Figure 9.1b: Functional architecture for GPRS subscriber support of CAMEL

**gsmSCF:** see subclause 3.1.

**HLR:** The HLR contains Mobility management CAMEL Subscription Information (M-CSI) for those CS subscribers that require CAMEL control of Mobility Management events and Mobility management GPRS CAMEL Subscription Information (MG-CSI) for those GPRS subscribers that require CAMEL control of Mobility Management events. M-CSI is sent to the VLR during the Location Update and Restore Data procedures or when M-CSI is modified in the HLR. The M-CSI is deleted in the VLR with the Delete Subscriber Data procedure. MG-CSI is sent to the SGSN during the Routing Area Update and Restore Data procedures or when MG-CSI is modified in the HLR. The MG-CSI is deleted in the SGSN with the Delete Subscriber Data procedure.

**MS:** Mobile Station.

**MSC:** see subclause 4.1.

**VLR:** After having completed a Mobility Management event from a CS subscriber, the VLR may find it necessary to send a notification to the gsmSCF. The content of M-CSI indicates which Mobility Management events shall be reported to the gsmSCF.

**SGSN:** After having completed a Mobility Management event from a GPRS subscriber, the SGSN may find it necessary to send a notification to the gsmSCF. The content of MG-CSI indicates which Mobility Management events shall be reported to the gsmSCF.

## 9.1.2 Interfaces defined for CAMEL

This subclause describes the different interfaces applicable to CAMEL control of Mobility Management events. It specifies on a high level the functions specific to CAMEL.

### 9.1.2.2 VLR - gsmSCF interface

This interface is used by the VLR to send Mobility Management event notifications to the gsmSCF. When processing a mobility management event, the VLR may find it necessary to send a notification to the gsmSCF, depending on the presence of M-CSI for the subscriber and the contents of M-CSI.

### 9.1.2.3 SGSN - gsmSCF interface

This interface is used by the SGSN to send Mobility Management event notifications to the gsmSCF. When processing a mobility management event, the SGSN may find it necessary to send a notification to the gsmSCF, depending on the presence of MG-CSI for the subscriber and the contents of MG-CSI.

## 9.2 Description of CAMEL Subscriber Data

### 9.2.1 Mobility Management CAMEL Subscription Information (M-CSI)

This subclause specifies the contents of the Mobility Management CAMEL Subscription Information (M-CSI).

#### 9.2.1.1 Mobility Management Triggers

This data indicates which Mobility Management events shall result in a notification to the gsmSCF. One or more events may be marked per subscriber. These events are:

- Location update in the same VLR service area.
- Location update to another VLR service area.
- IMSI attach.
- MS initiated IMSI detach (explicit detach).
- Network initiated IMSI detach (implicit detach).

#### 9.2.1.2 gsmSCF address

This is the address of the gsmSCF where the Mobility Management event notification shall be sent to. The gsmSCF address is in E.164 format.

#### 9.2.1.3 Service Key

The Service Key is included in the notification information flow to the gsmSCF. It indicates to the gsmSCF which Service Logic shall be applied.

#### 9.2.1.4 CSI state

The CSI state indicates whether the M-CSI is active or not.

#### 9.2.1.5 Notification flag

The notification flag indicates whether the change of the M-CSI shall trigger Notification on Change of Subscriber Data or not.

### 9.2.2 Mobility Management for GPRS CAMEL Subscription Information (MG-CSI)

This subclause specifies the contents of the Mobility Management for GPRS CAMEL Subscription Information (MG-CSI).

#### 9.2.2.1 Mobility Management Triggers

This data indicates which Mobility Management events shall result in a notification to the gsmSCF. One or more events may be marked per subscriber. These events are:

- Routeing area update of MS to a different SGSN service area;
- Routeing area update of MS within the same SGSN service area;
- GPRS attach (e.g. MS switched on, successful routeing area update after network initiated transfer to "MS not reachable for paging");
- MS-initiated GPRS detach (e.g. MS switched off);
- Network-initiated GPRS detach.
- Network-initiated transfer to the "not reachable for paging" state (the network has not received a periodic routeing area update from the MS and assumes that the MS is unreachable).

#### 9.2.2.2 gsmSCF address

This is the address of the gsmSCF where the Mobility Management event notification shall be sent to. The gsmSCF address is in E.164 format.

#### 9.2.2.3 Service Key

The Service Key is included in the notification information flow to the gsmSCF. It indicates to the gsmSCF which Service Logic shall be applied.

#### 9.2.2.4 CSI state

The CSI state indicates whether the MG-CSI is active or not.

#### 9.2.2.5 Notification flag

The notification flag indicates whether the change of the MG-CSI shall trigger Notification on Change of Subscriber Data or not.

### 9.2.3 gsmSCF address list for CSI

The gsmSCF address list indicates the gsmSCF addresses to which Notification on Change of Subscriber Data shall be sent. This list is common to all CSI.

## 9.3 Procedures for Mobility management

### 9.3.1 Procedures for Mobility management for CS subscriber

The different procedures for Mobility Management are shown in Figures 9.2a to 9.2e.

Figure 9.2a: Location Update within a single VLR Service Area. (The VLR Service area may be in the HPLMN or in the VPLMN.);

Figure 9.2b: Location Update from one VLR Service Area to another VLR Service Area. (Both VLR Service Areas are in the HPLMN or in the same VPLMN.);

Figure 9.2c: Location Update from one PLMN to another PLMN;

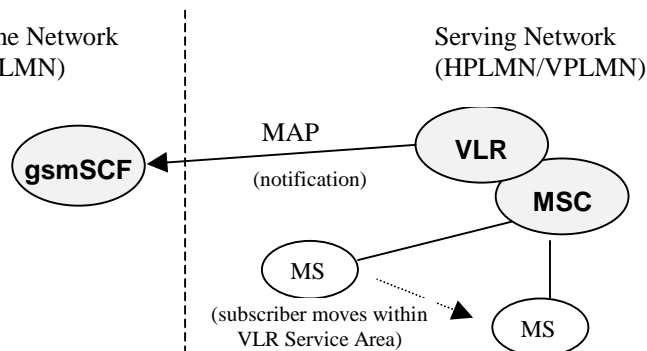

- update from HPLMN to VPLMN;
- update from VPLMN to HPLMN;
- update from one VPLMN to another VPLMN.

Figure 9.2d: IMSI Detach (in HPLMN or in VPLMN);

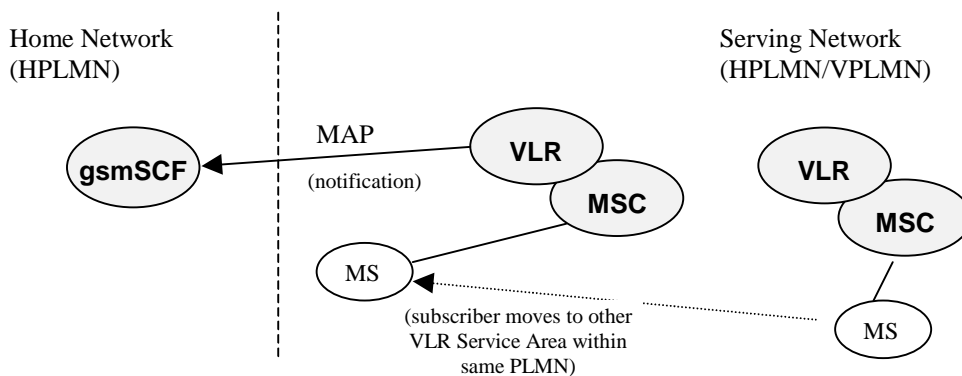

- explicit detach (the MS has been switched off by the subscriber);
- implicit detach (the network has not received a periodic paging update from the MS and assumes that the MS is switched off or unreachable).

Figure 9.2e: IMSI Attach (in HPLMN or in VPLMN);

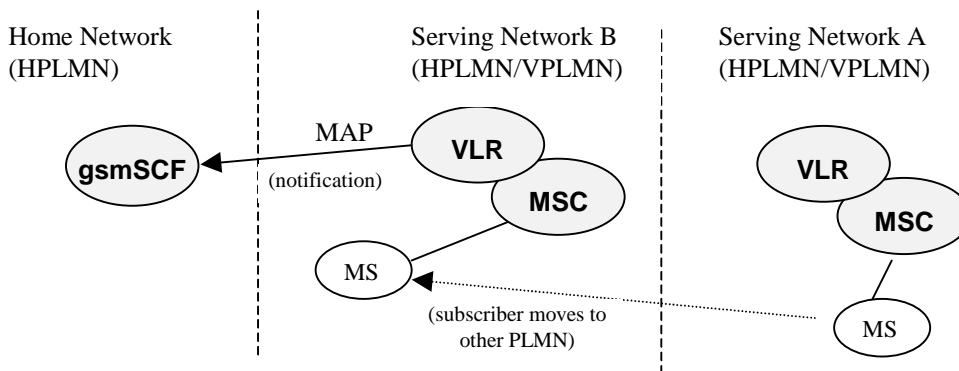

- attach (the MS has been switched on by the subscriber – subscription data is still available in the VLR, no location update is needed).

**Figure 9.2a: Location Update within a single VLR Service Area**

**Figure 9.2b: Location Update from one VLR Service Area to another VLR Service Area**

**Figure 9.2c: Location Update from one PLMN to another PLMN**

**Figure 9.2d: IMSI Detach (implicit/explicit)**

**Figure 9.2e: IMSI Attach**

When a Mobility Management Event has taken place and the processing has been completed, then the VLR may find it necessary to send a notification to the gsmSCF. The processing of the Mobility Management event in the VLR is not suspended by the sending of the notification nor is it in any way affected by the notification.

The sending of a Mobility Management notification to gsmSCF is independent of other CAMEL subscription data for a subscriber. E.g. a subscriber may have M-CSI without O-CSI or VT-CSI.

The sending of a Mobility Management event notification is subscription based.

Refer to subclause 9.2.1 for a description of M-CSI and the different Mobility Management events that may lead to a notification to the gsmSCF.

### 9.3.1.1 Procedure descriptions

#### 9.3.1.1.1 Procedure Set\_Notification\_Type

This procedure is called from process Update\_Location\_VLR in 3GPP TS 23.012 [10]. It checks the information element 'Location Update Type', which the VLR receives from the MSC via MAP\_UPDATE\_LOCATION\_AREA service. This element identifies the type of Location Update requested by the mobile station.

The possible values of this parameter are specified in 3GPP TS 24.008 [28].

The type of Location Update that was requested by the mobile station determines which Mobility Management notification information flow shall be sent to the gsmSCF.

The values 'Periodic Updating' and 'Reserved' shall not lead to a Mobility Management notification to the gsmSCF.

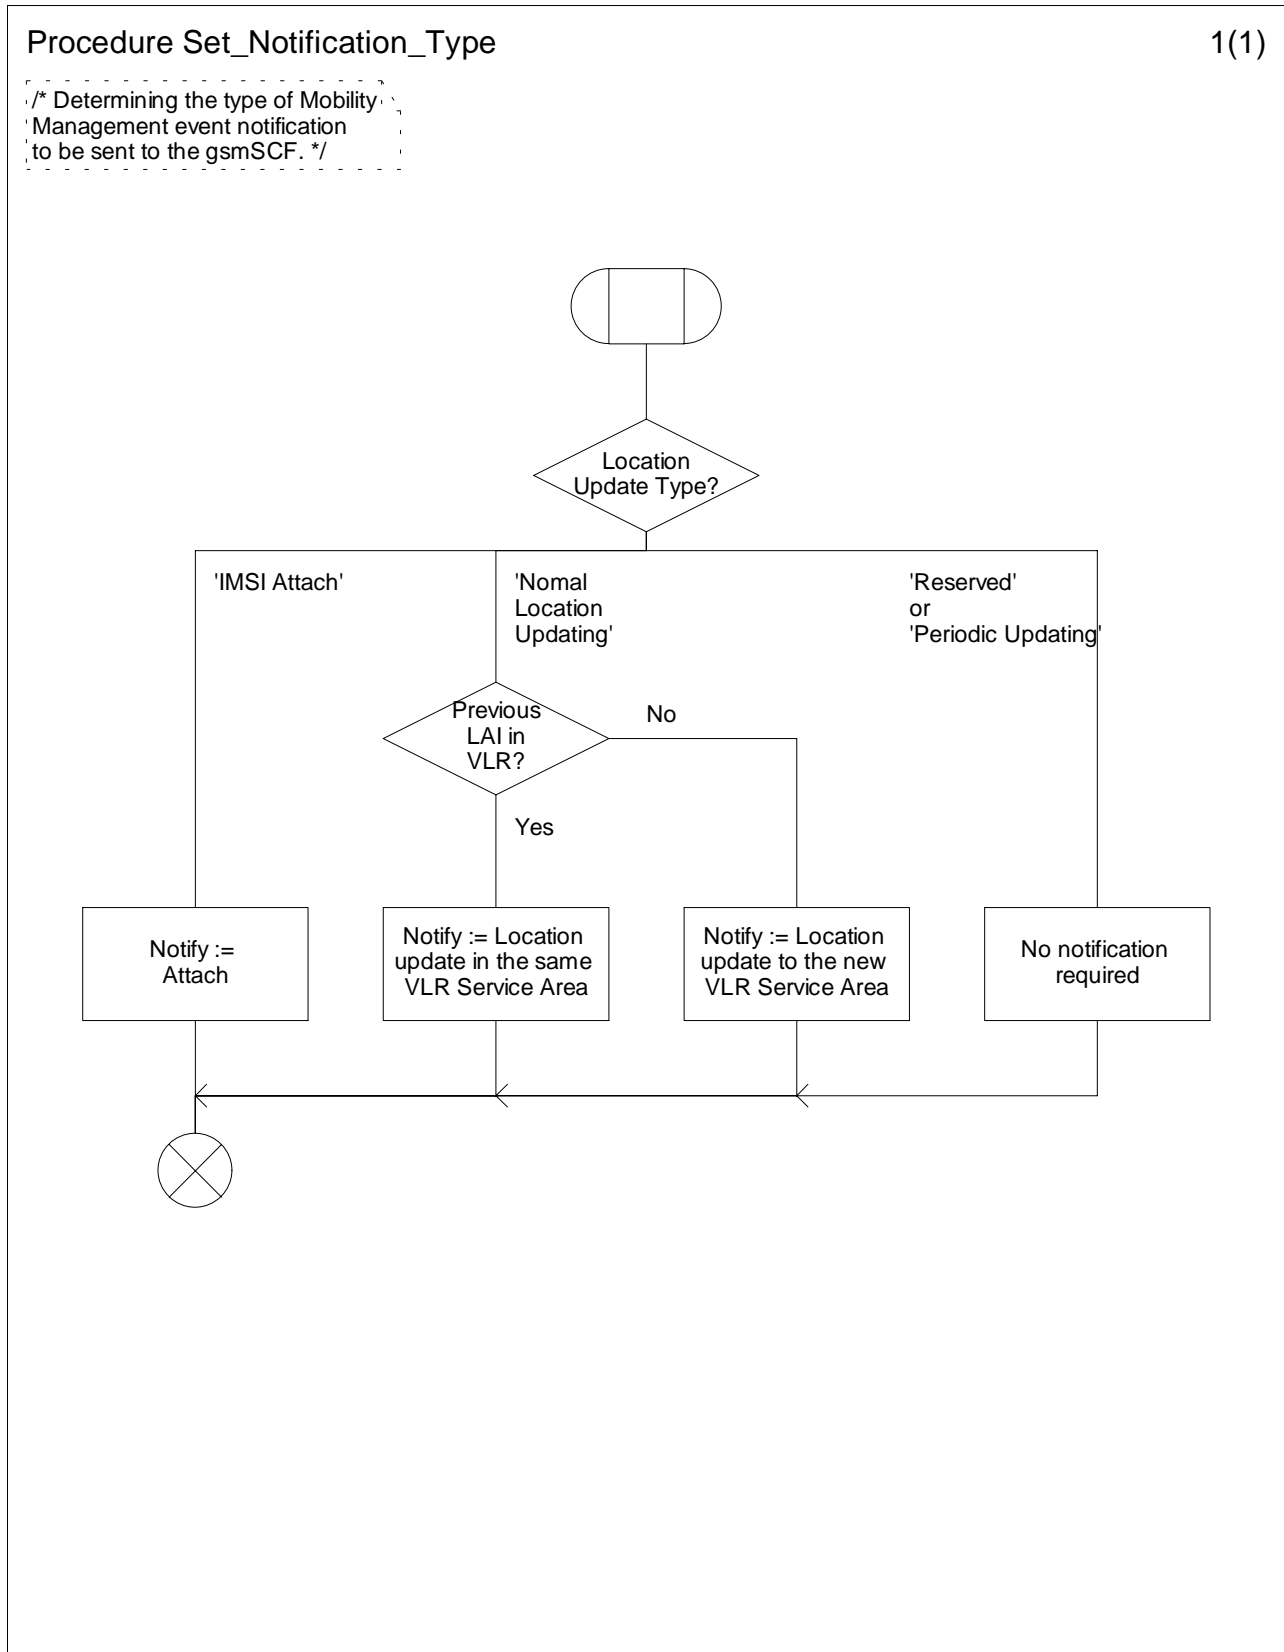

Figure 9.3a: Procedure Set\_Notification\_Type (sheet 1)

9.3.1.1.2 Procedure Notify\_gsmSCF

This procedure is called from the process 'Update\_Location\_Area\_VLR' and process 'Detach\_IMSI\_VLR' in 3GPP TS 23.012 [10]. It is also called from the process 'Update\_Location\_VLR' in 3GPP TS 29.002 [32].

The calling process passes on the variable 'Notify' to the procedure 'Notify\_gsmSCF'. This variable indicates which Mobility Management notification may be necessary to be sent to the gsmSCF. If this variable has a value NULL, then no notification shall be sent to the gsmSCF.

If a notification may be necessary to be sent to the gsmSCF, then the procedure checks the presence of M-CSI.

- If M-CSI is present and the Mobility Management event indicated in the variable 'Notify' is marked in M-CSI, then a notification shall be sent to the gsmSCF.
- If M-CSI is not present or the Mobility Management event indicated in the variable 'Notify' is not marked in M-CSI, then no notification shall be sent to the gsmSCF.

### Procedure Notify\_gsmSCF

1(1)

/\* Sending a notification to the  
gsmSCF, if needed. \*/

/\* Signals to/from the right are  
to/from the process  
'MM\_Event\_Notification\_VLR'  
in 3GPP TS 29.002. \*/

Figure 9.4a: Procedure Notify\_gsmSCF (sheet 1)

## 9.3.2 Procedures for Mobility management for GPRS subscriber

The different procedures for Mobility Management are shown in figures 9.5a to 9.5e.

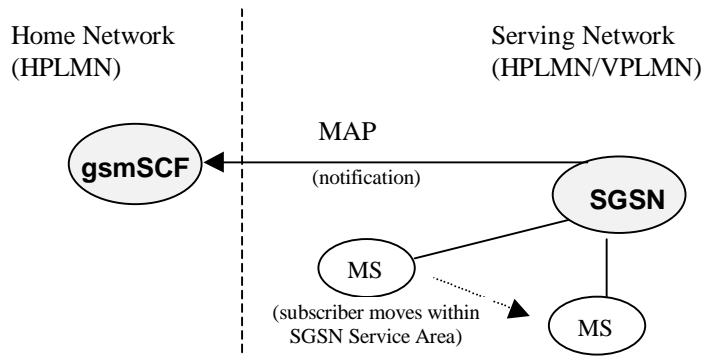

Figure 9.5a: Routing Area Update within SGSN Service Area

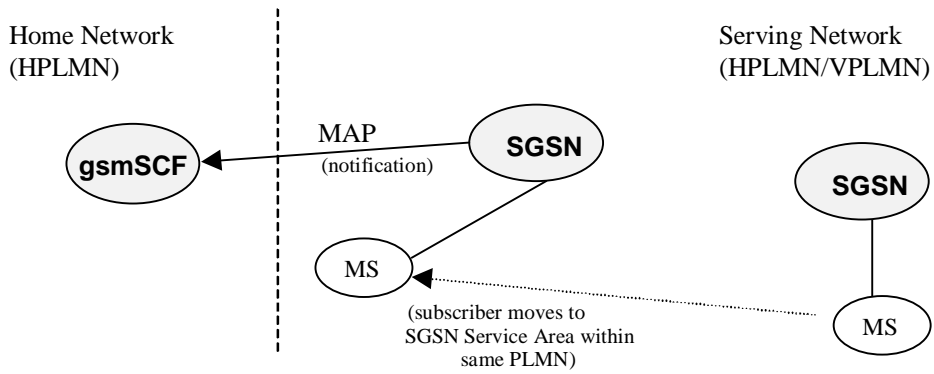

Figure 9.5b: Routing Area Update from one SGSN Service Area to another SGSN Service Area

Figure 9.5c: Routing Area Update from one PLMN to another PLMN

Figure 9.5d: Attach of MS

**Figure 9.5e: GPRS detach**

When a Mobility Management Event has taken place and the processing has been completed, then the SGSN may have to send a notification to the gsmSCF.

The sending of a Mobility Management notification to gsmSCF is independent of other CAMEL subscription data for a subscriber. E.g. a subscriber may have MG-CSI without GPRS-CSI.

The sending of a Mobility Management event notification is subscription based.

Refer to subclause 9.2.2 for a description of MG-CSI and the different Mobility Management events that may lead to a notification to the gsmSCF.

### 9.3.2.1 Procedure CAMEL\_PS\_Notification

This procedure is called from processes in 3GPP TS 23.060 [15]. When this procedure is called, it checks the presence of MG-CSI. If there is no MG-CSI, then no notification is sent to the gsmSCF.

### Procedure CAMEL\_PS\_Notification

1(1)

/\* procedure in the SGSN for mobility management for GPRS subscriber \*/

Figure 9.6a: Procedure CAMEL\_PS\_Notification (sheet 1)

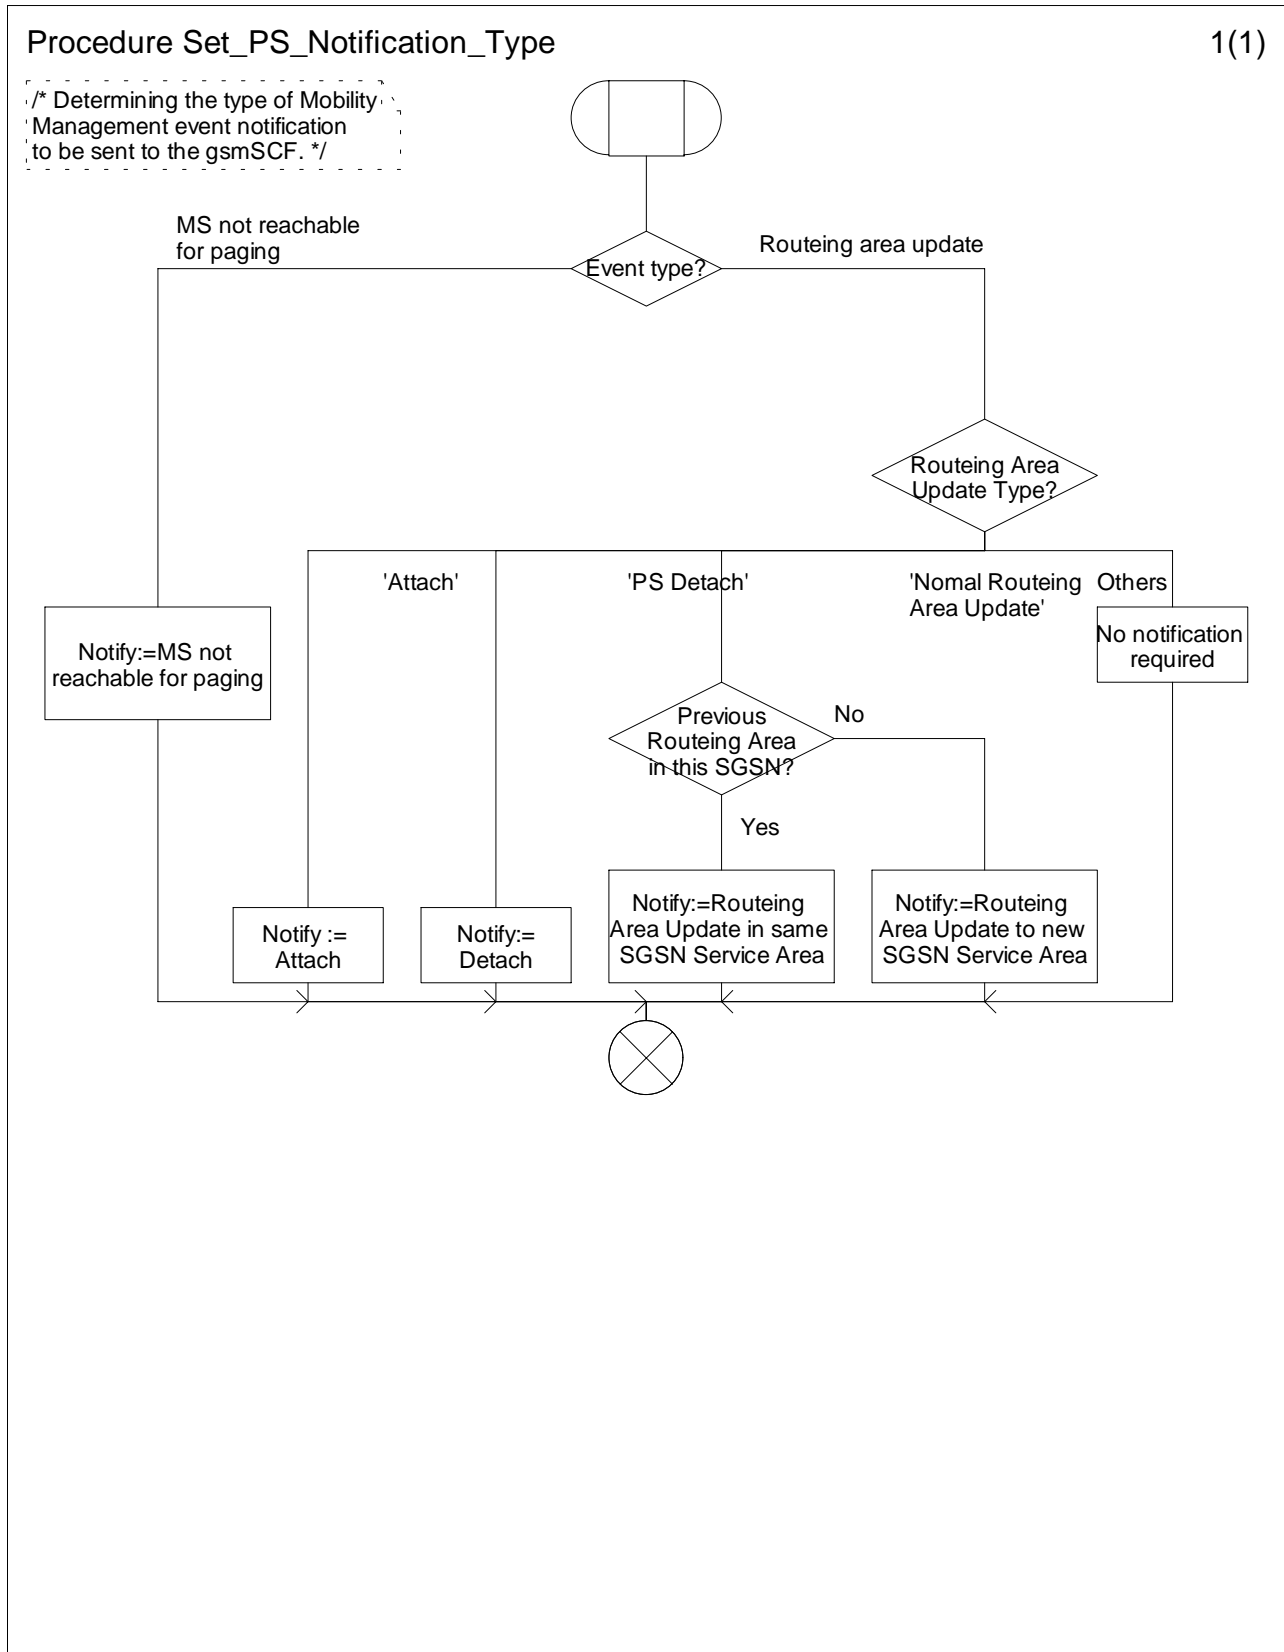

Figure 9.7a: Procedure Set\_PS\_Notification\_Type (sheet 1)

### Procedure Notify\_PS\_gsmSCF

1(1)

/\* Sending a notification to the  
gsmSCF, if needed. \*/

/\* Signals to/from the right are  
to/from the process  
'MM\_Event\_Notification\_VLR/SGSN'  
in 3GPP TS 29.002. \*/

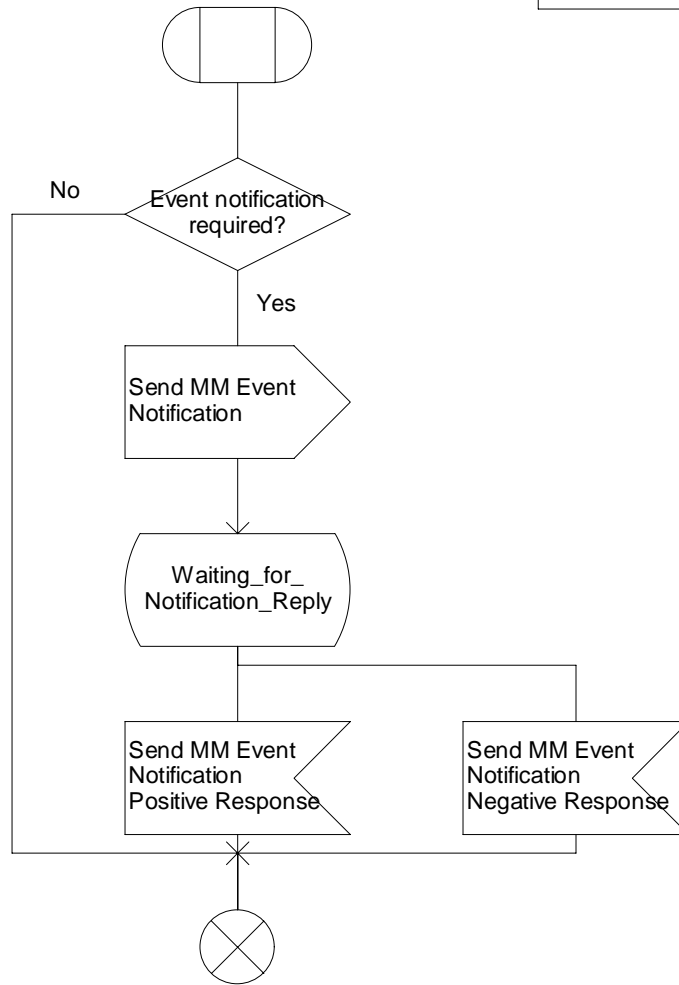

Figure 9.8a: Procedure Notify\_PS\_gsmSCF (sheet 1)

## 9.4 Description of information flows

This subclause contains the detailed description of the information flows used by CAMEL for Mobility Management control.

Each Information Element (IE) is marked as Mandatory (M), Conditional (C), Specific conditions (S), mutually Exclusive (E), Optional (O) or not applicable (-) for each different entity involved: VLR (VLR) and SGSN (SGSN) where distinction is applicable.

An 'M' IE shall always be included. A 'C' IE shall be included if the sending entity has the necessary information to populate the IE. The conditions for the inclusion of an 'S' IE are shown in the 'Description' column of the definition table. When a set of 'E' IEs is shown in the definition of an Information Flow or compound IE, only one of those IEs may be included. An 'O' IE may be included or omitted as required by the service logic. A '-' IE shall always be omitted. This categorization is a functional classification, i.e. it defines the requirements for the stage 2 information. It is not a stage 3 classification to be used for the ASN.1 syntax of the protocol.

The following principles apply for the handling of the IEs by the receiving entity:

- The gsmSCF may silently discard any IE which it does not functionally support;
- The VLR shall functionally support all IEs which can be sent to it;
- The SGSN shall functionally support all IEs which can be sent to it.

### 9.4.1 VLR or SGSN to gsmSCF information flows

#### 9.4.1.1 Mobility Management event Notification

##### 9.4.1.1.1 Description

This IF is generated by the VLR or SGSN to notify the gsmSCF of a Mobility Management event.

##### 9.4.1.1.2 Information Elements

Information element name	VLR	SGSN	Description
Event Met	M	M	This IE indicates the type of Mobility Management event that lead to the notification. Refer to subclause 9.2.1.1 for the CS subscriber and subclause 9.2.2.1 for the GPRS subscriber.
Service Key	M	M	This IE indicates the Service Logic that the gsmSCF shall apply.
IMSI	M	M	This IE identifies the mobile subscriber to whom the Mobility Event applies.
Basic MSISDN	M	M	This IE identifies the mobile subscriber to whom the Mobility Event applies.
Location Information for CS subscriber	C	-	This IE is described in a table below. This IE indicates the current location of the MS.
Location Information for GPRS subscriber	-	C	This IE indicates the current location of the MS which is equivalent to the location info SGSN IE in subclause 7.6.1.2.
Supported CAMEL Phases	M	M	This IE indicates the CAMEL Phases that are supported by the sending entity (VMSC/VLR or SGSN) in which the MS is registered after the mobility management event.
Supported CAMEL4 Subsets	M	M	This IE indicates the CAMEL phase 4 subsets supported by the sending entity (VMSC/VLR or SGSN).

Location Information for CS subscriber is defined in 3GPP TS 23.018 [12]. The following differences apply:

Information element name	Status	Description
Service area ID	C,E	See 3GPP TS 23.018 [12].
Cell ID	C,E	See 3GPP TS 23.018 [12].
Current Location Retrieved	-	Not applicable
Location area ID	C,E	See 3GPP TS 23.003 [7].
Selected LSA Identity	S	This IE indicates the LSA identity associated with the current position of the MS. It shall be present if the LSA ID in the subscriber data matches the LSA ID of the current cell. In the case of multiple matches the LSA ID with the highest priority it shall be present. See 3GPP TS 23.073 [17].

### 9.4.3 SGSN to HLR information flows

#### 9.4.3.1 Update GPRS Location

See subclause 7.6.4.3.

### 9.4.4 VLR to HLR information flows

#### 9.4.4.1 Update Location

See subclause 4.6.8.3.

#### 9.4.4.2 Restore Data

See subclause 4.6.8.4.

### 9.4.2 HLR to VLR or SGSN information flows

#### 9.4.2.1 Delete Subscriber Data

##### 9.4.2.1.1 Description

This IF is used by an HLR to delete CAMEL subscription data from a VLR or SGSN. It is specified in 3GPP TS 29.002 [32].

##### 9.4.2.1.2 Information Elements

The Delete Subscriber Data IF contains the following CAMEL specific information elements for Mobility Management:

Information element name	VLR	SGSN	Description
CAMEL Subscription Info Withdraw	O	O	This IE identifies that all CSIs shall be deleted from the subscriber data in VLR or SGSN.
Specific CSI Withdraw	O	O	This IE is used to indicate that only M-CSI or MG-CSI shall be deleted from the VLR or SGSN respectively. It should not be present when CAMEL Subscription Info Withdraw is present.

#### 9.4.2.2 Insert Subscriber Data

##### 9.4.2.2.1 Description

This IF is used by an HLR to update a VLR or SGSN with certain subscriber data. This IF is specified in 3GPP TS 29.002 [32].

### 9.4.2.2.2 Information Elements

Insert Subscriber Data contains the following CAMEL specific information elements for Mobility Management:

Information element name	VLR	SGSN	Description
M-CSI	O	-	This IE identifies the CS subscriber as having mobility management notification services. It contains the events that shall be reported, the gsmSCF Address and the Service Key.
MG-CSI	-	O	This IE identifies the GPRS subscriber as having mobility management notification services. It contains the events that shall be reported, the gsmSCF Address and the Service Key.

M-CSI contains the following information elements:

Information element name	Status	Description
GsmSCF Address	M	This IE is described in subclause 9.2.1.
Service Key	M	This IE is described in subclause 9.2.1.
Mobility Management Triggers	M	This IE indicates which Mobility Management events shall be reported to the gsmSCF. It shall contain one or more of the following elements: <ul style="list-style-type: none"> <li>- Location update in the same VLR service area</li> <li>- Location update to another VLR service area</li> <li>- IMSI attach</li> <li>- MS initiated IMSI detach (explicit detach)</li> <li>- Network initiated IMSI detach (implicit detach)</li> </ul>

MG-CSI contains the following information elements:

Information element name	Status	Description
GsmSCF Address	M	This IE is described in subclause 9.2.2.
Service Key	M	This IE is described in subclause 9.2.2.
Mobility Management Triggers	M	This IE is described in subclause 9.2.2.

## 10 Control and interrogation of subscription data

Support of the procedures described in this clause in CAMEL Phase 4 is a network operator option.

### 10.1 Architecture

#### 10.1.1 Functional Entities used for CAMEL

This subclause describes the functional architecture required to support control and interrogation of subscription data. Figure 10.1 shows the functional entities involved in CAMEL support of control and interrogation of subscription data.

**Figure 10.1: Functional architecture for support of control and interrogation of subscription data**

**gsmSCF:** see subclause 3.1.

**HLR:** The HLR may provide an interface to the gsmSCF for the Any Time Subscription Interrogation and Any Time Modification procedures. The gsmSCF may provide an interface to the HLR for the Notify Subscriber Data Change procedure.

## 10.1.2 Interfaces defined for CAMEL

This subclause describes the interface applicable to CAMEL control of subscription data. It specifies on a high level the functions specific to CAMEL.

### 10.1.2.1 gsmSCF - HLR

This interface is used by the gsmSCF to interrogate or modify information in the HLR. As a network operator option, the HLR may refuse to provide or modify the information requested by the gsmSCF. This interface is also used by the HLR to notify the gsmSCF of a change of subscriber data.

## 10.2 Procedures for CAMEL

### 10.2.1 Any Time Subscription Interrogation

Handling of Any Time Interrogation for Subscription Information Retrieval involves the following process:

- CAMEL\_ATSI\_HLR.

If an OSS needs the Subscription Information, the gsmSCF initiates a transaction to the HLR by sending an Any Time Subscription Interrogation Request.

### Process CAMEL\_ATSI\_HLR

1(2)

/\* Process in the HLR receiving an Any Time Subscription Interrogation request from gsmSCF. \*/

/\* Signals to/from the left are to/from the gsmSCF. \*/

Figure 10.2a: Process CAMEL\_ATSI\_HLR (sheet 1)

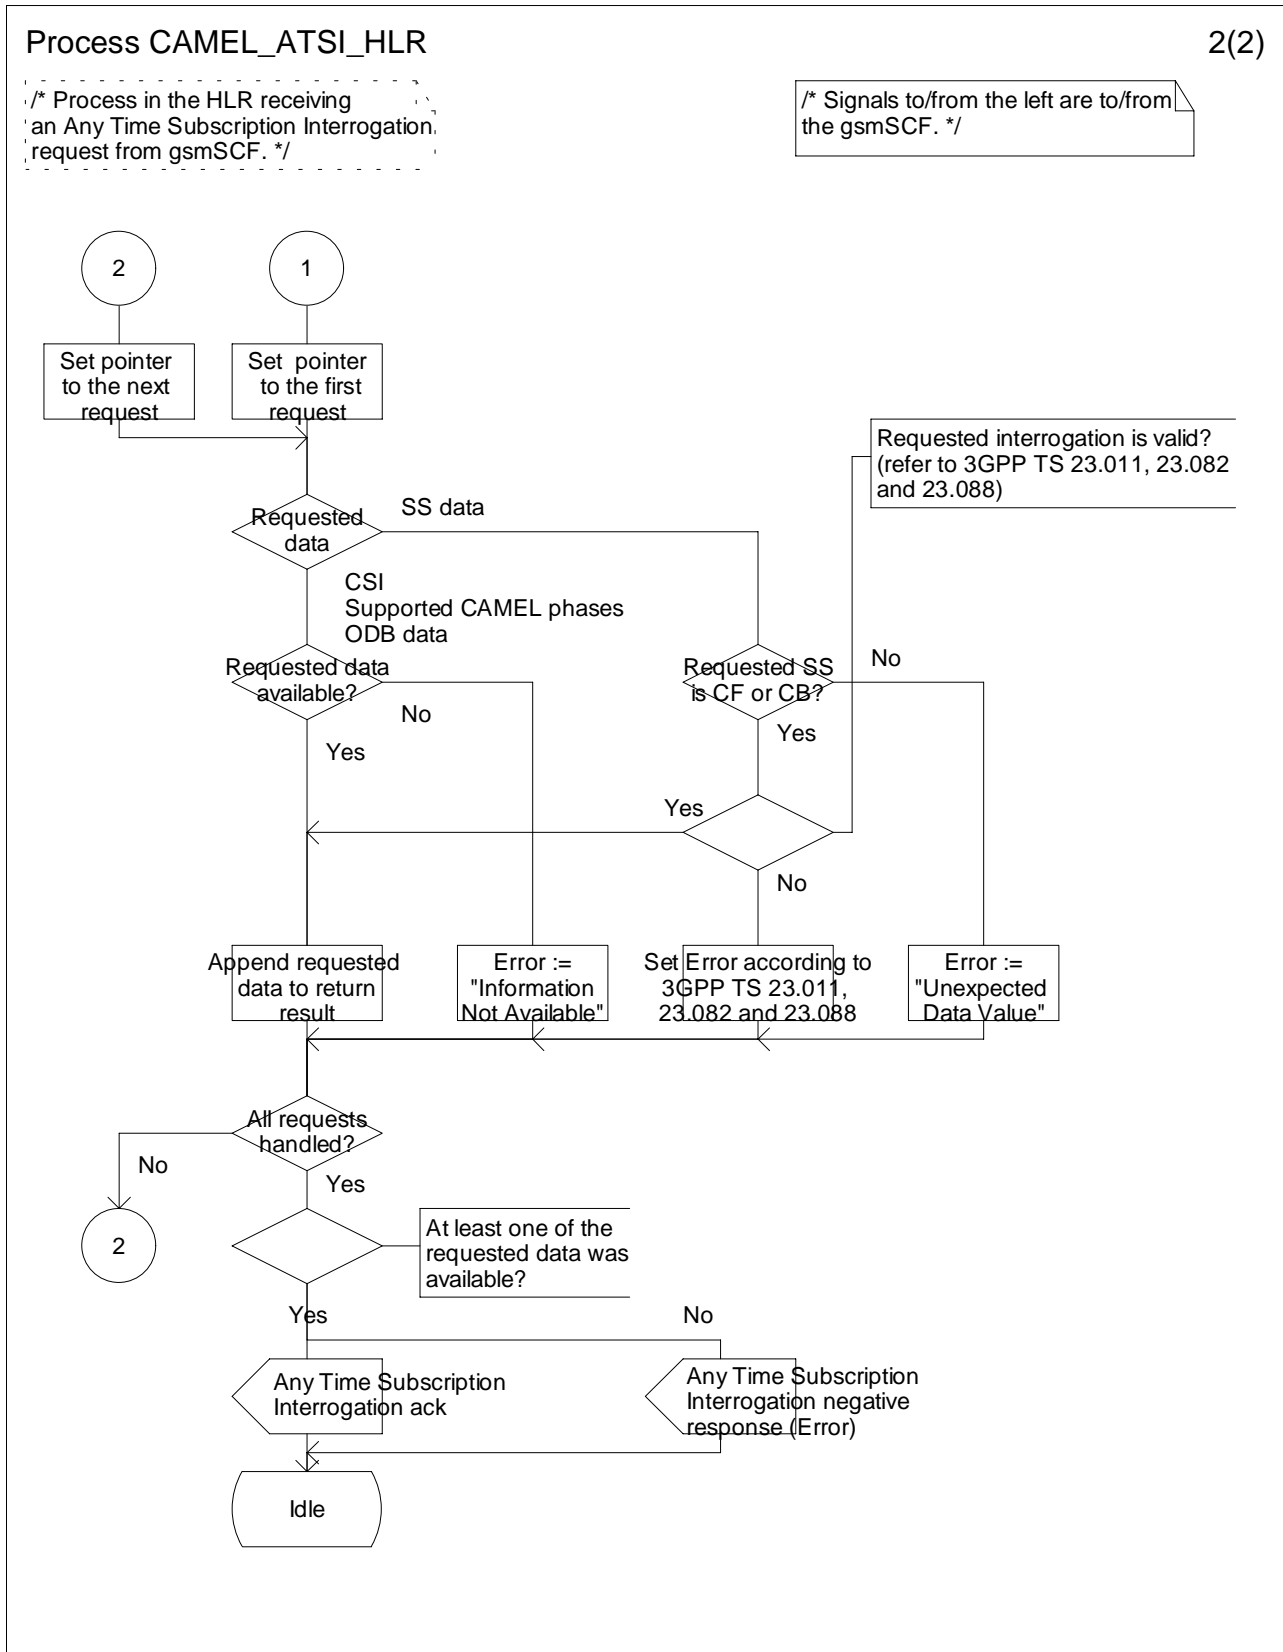

Figure 10.2b: Process CAMEL\_ATSI\_HLR (sheet 2)

### 10.2.2 Any Time Modification

Handling of Any Time Modification involves the following process:

- CAMEL\_ATM\_HLR.

The following procedures are involved:

- ATM\_Modify\_Data  
This procedure checks which data shall be modified and calls the appropriate data modification procedure.
- ATM\_Modify\_CSI\_Data  
If the CSI indicated in the ATM request is not available in the HLR, then an error is returned.  
Otherwise, the CSI state and/or Notification-to-CSE flag are set as instructed with the ATM request.
- ATM\_Modify\_CF\_Data  
When only the SS-code and (optionally) a Basic Service code are present in the ATM request, then all Call Forwarding data belonging to this SS code and basic service code is erased, the associated notificationToCSE flag is unchanged and the SS-Status is amended according to the state transition model defined in 3GPP TS 23.082 [19].  
Otherwise, the behaviour is as follows:
  - If a valid SS state is present in the ATM request, then an SS state transition is performed.
  - If a valid FTN, FTN sub address or No Reply Condition Time is present in the ATM request, then the indicated variable is modified.
  - Before modification of CF data (SS state changed to 'registered', insert or change of FTN), the interaction checks between CF and ODB and between CF and CB shall be performed as described in 3GPP TS 23.015 [11] and TS 23.082 [19] respectively. The CF data shall only be modified if the changed new CF data does not conflict with the existing ODB or CB entries.
  - If an instruction to modify the notification-to-CSE flag is present in the ATM request, then the notification-to-CSE flag is modified.
  - If the modification is partially successful (e.g. succeeds for one Basic Service but fails for another Basic Service), then the operation is partially accepted by the HLR. The accepted changes are made in the HLR and the changed data is sent in the ATM acknowledgement.
- ATM\_Modify\_CB\_Data  
When only the SS-code and (optionally) a Basic Service code are present in the ATM request, then all Call Barring belonging to this SS code and basic service code is deactivated, the associated notificationToCSE flag is unchanged and the SS-Status is amended according to the state transition model defined in 3GPP TS 23.088 [22].  
Otherwise, the behaviour is as follows:
  - If a valid SS state is present in the ATM request, then an SS state transition is performed.
  - Before modification of CB data (SS state), the interaction checks between CF and CB shall be performed as described in 3GPP TS 23.088 [22]. The CB data shall only be modified if the changed new CB data does not conflict with the existing CF entries.
  - If a valid Password or 'Wrong password attempt counter' is present in the ATM request, then the indicated variable is modified.
  - If an instruction to modify the notification-to-CSE flag is present in the ATM request, then the notification-to-CSE flag is modified.
- ATM\_Modify\_ODB\_Data
  - If ODB data is not present in the ATM request, then it is assumed that the ODB data is not modified. When present, the modification is done by overwriting the existing ODB data.
  - If an instruction to modify the notification-to-CSE flag is present in the ATM request, then the notification-to-CSE flag is modified.
  - If the modification is partially successful (e.g. succeeds for one Basic Service but fails for another Basic Service), then the operation is partially accepted by the HLR. The accepted changes are made in the HLR and the changed data is sent in the ATM acknowledgement.

After having executed the Any Time Modification instruction from the gsmSCF, the HLR calls the procedure CAMEL\_NSDC\_HLR, which sends notifications to gsmSCF(s), if required.

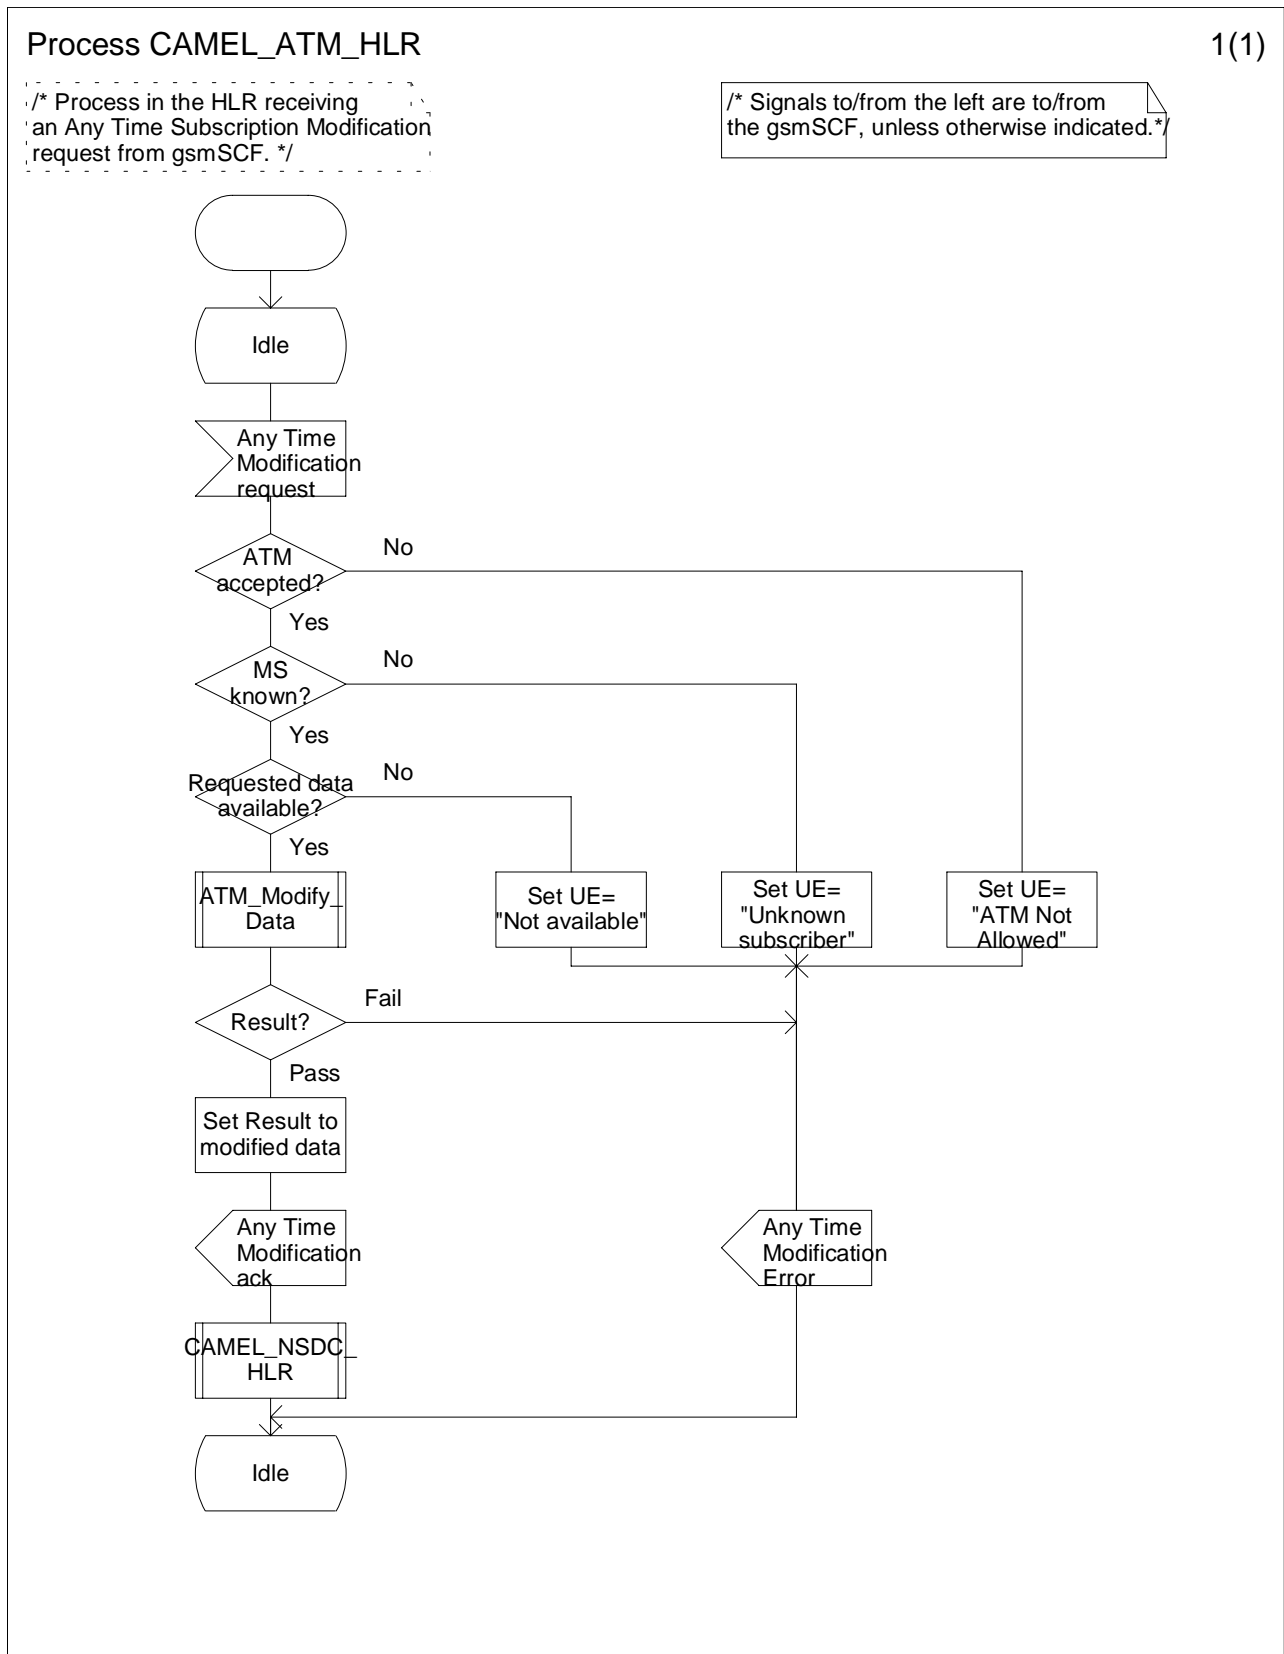

Figure 10.3a: Process CAMEL\_ATM\_HLR (sheet 1)

### Procedure ATM\_Modify\_Data

1(1)

/\* Procedure in the HLR to modify subscriber data as a result of an ATM request. \*/

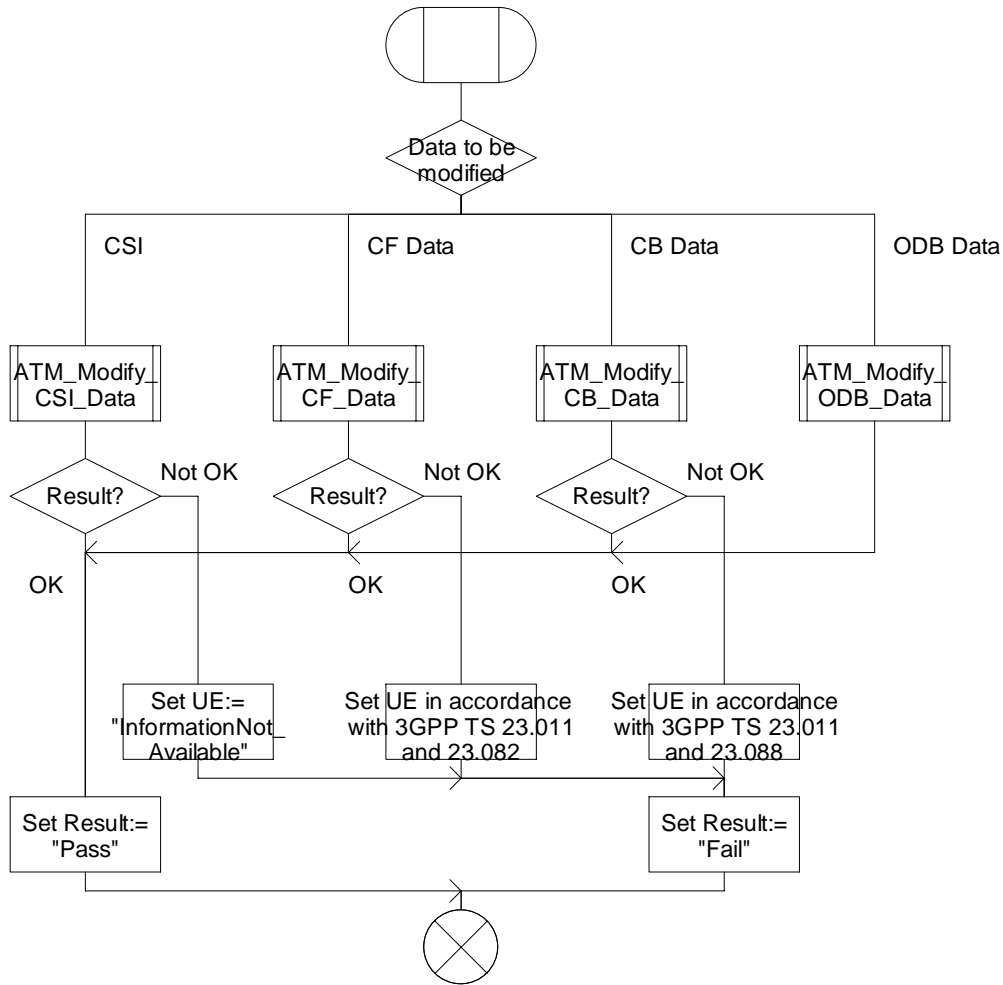

Figure 10.4a: Procedure ATM\_Modify\_Data (sheet 1)

### Procedure ATM\_Modify\_CSI\_Data

1(1)

/\* Procedure in the HLR to modify CSI data as a result of an ATM request. \*/

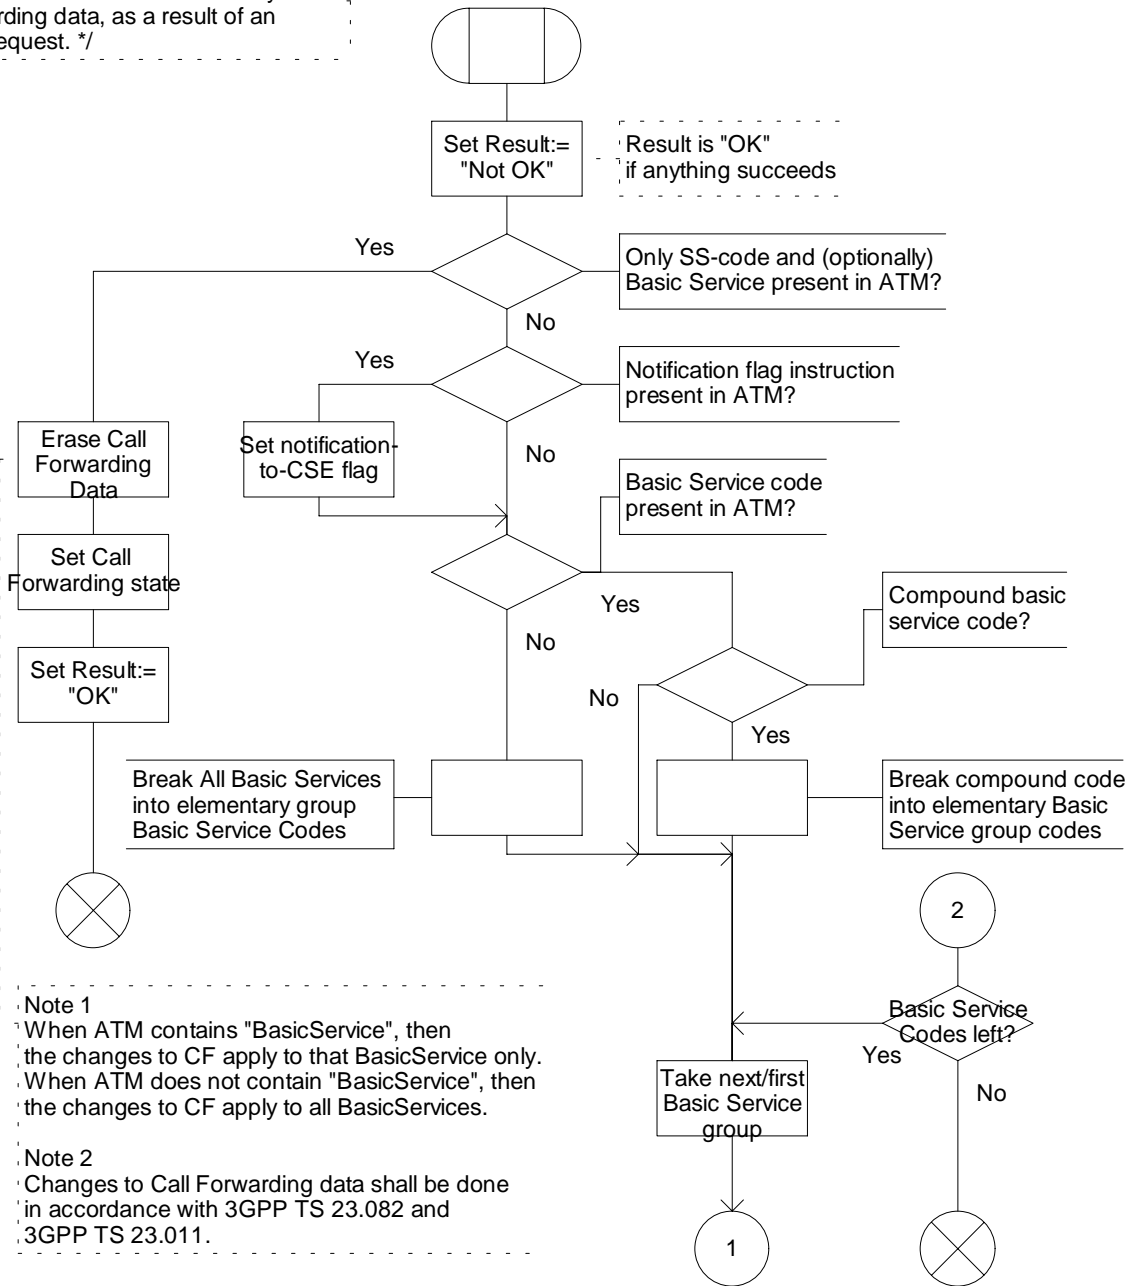

Figure 10.5a: Procedure ATM\_Modify\_CSI\_Data (sheet 1)

Procedure ATM\_Modify\_CF\_Data

1(2)

/\* Procedure in the HLR to modify Call Forwarding data, as a result of an ATM request. \*/

Note 1  
When ATM contains "BasicService", then the changes to CF apply to that BasicService only.  
When ATM does not contain "BasicService", then the changes to CF apply to all BasicServices.

Note 2  
Changes to Call Forwarding data shall be done in accordance with 3GPP TS 23.082 and 3GPP TS 23.011.

Figure 10.6a: Procedure ATM\_Modify\_CF\_Data (sheet 1)

### Procedure ATM\_Modify\_CF\_Data

2(2)

/\* Procedure in the HLR to modify Call Forwarding data, as a result of an ATM request. \*/

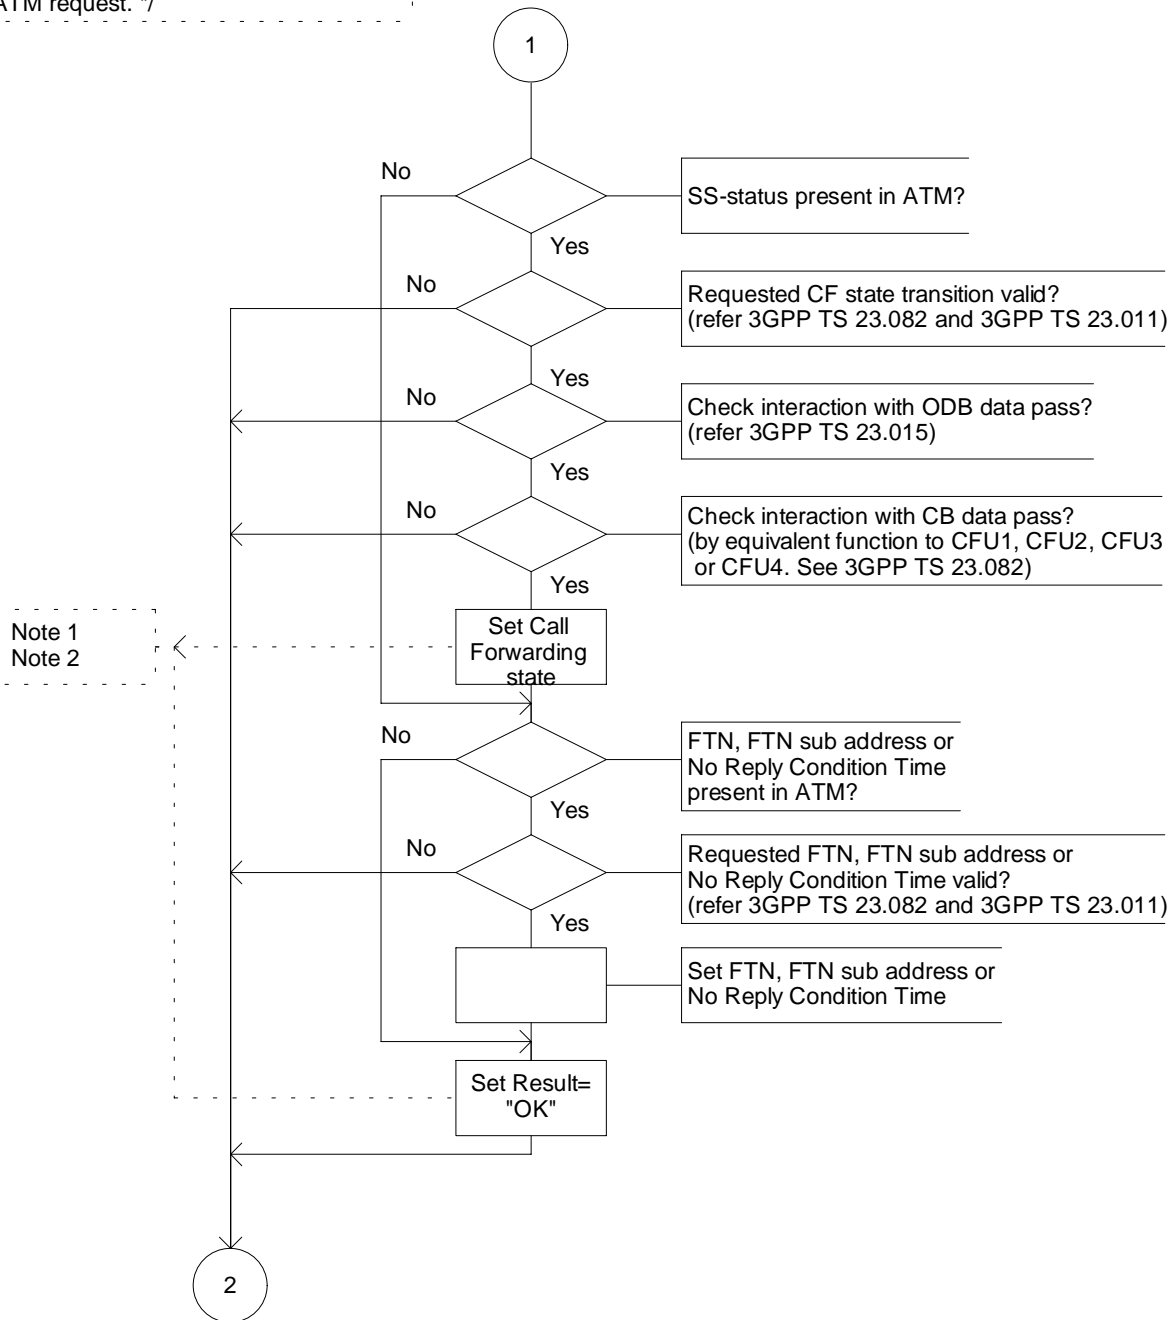

Figure 10.6b: Procedure ATM\_Modify\_CF\_Data (sheet 2)

Procedure ATM\_Modify\_CB\_Data

1(2)

/\* Procedure in the HLR to modify Call Barring data, as a result of an ATM request. \*/

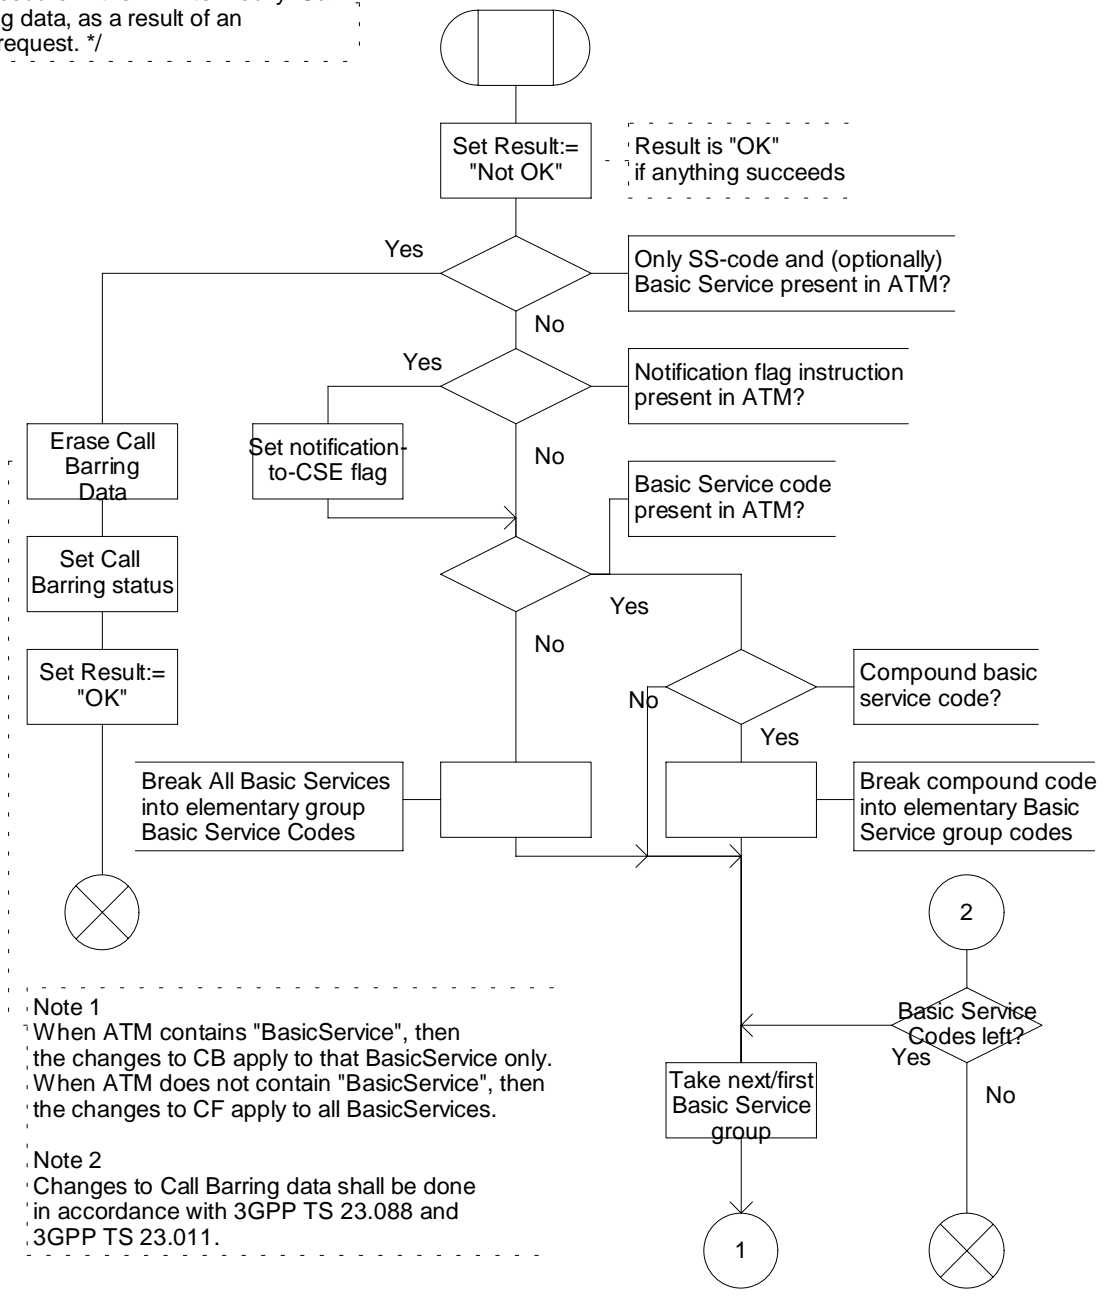

Figure 10.7a: Procedure ATM\_Modify\_CB\_Data (sheet 1)

### Procedure ATM\_Modify\_CB\_Data

2(2)

/\* Procedure in the HLR to modify Call Barring data, as a result of an ATM request. \*/

### Procedure ATM\_Modify\_ODB\_Data

1(1)

/\* Procedure in the HLR to modify CSI data as a result of an ATM request. \*/

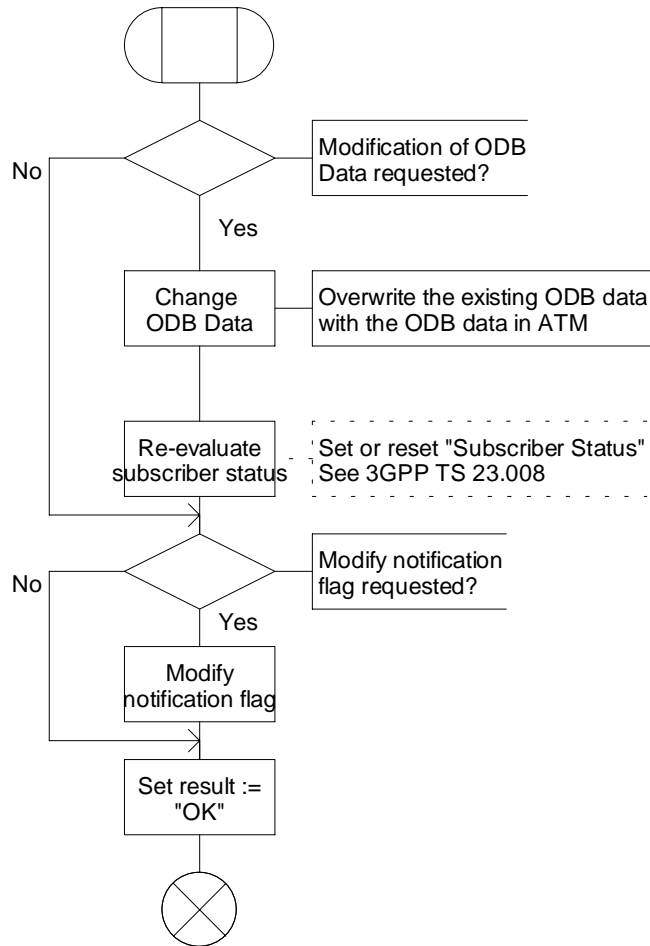

Figure 10.8a: Procedure ATM\_Modify\_ODB\_Data (sheet 1)

### 10.2.3 Notify Subscriber Data Change

Changes of CSI, Call Forwarding data, Call Barring data or ODB data shall be notified only if the CSI, Call Forwarding data, Call Barring data or ODB data is marked with the Notification-to-CSE flag.

The HLR maintains a list of gsmSCF address(es) for Call Forwarding Data, Call Barring Data, ODB and CSI. When any of these items has been modified, a notification shall be sent to each gsmSCF in the corresponding list.

The sending of a notification to the gsmSCF may be triggered by the following processes:

- subscriber data change by administrative procedure;
- subscriber data changed by subscriber;
- subscriber data changed by Any Time Modification request from gsmSCF;
- subscriber data changed due to a change of other subscriber data;
- subscriber data change due to Location Update.

When the change of subscriber data was requested by Any Time Modification the notification of change of subscriber data shall not be sent to the gsmSCF which originated this Any Time Modification request.

Each gsmSCF shall be notified only once. Multiple occurrence of gsmSCF Address in these lists shall not lead to multiple notification.

Handling of Notify Subscriber Data Change involves the following procedure:

- CAMEL\_NSDC\_HLR.

If a change of subscriber data needs to be notified to the gsmSCF, then the HLR initiates a transaction to the gsmSCF by sending Notify Subscriber Data Change information flow.

Procedure CAMEL\_NSDC\_HLR

1(1)

/\* Procedure in the HLR to notify the gsmSCF about a change in subscriber data. \*/

/\* Signals to/from the left are to/from the gsmSCF. \*/

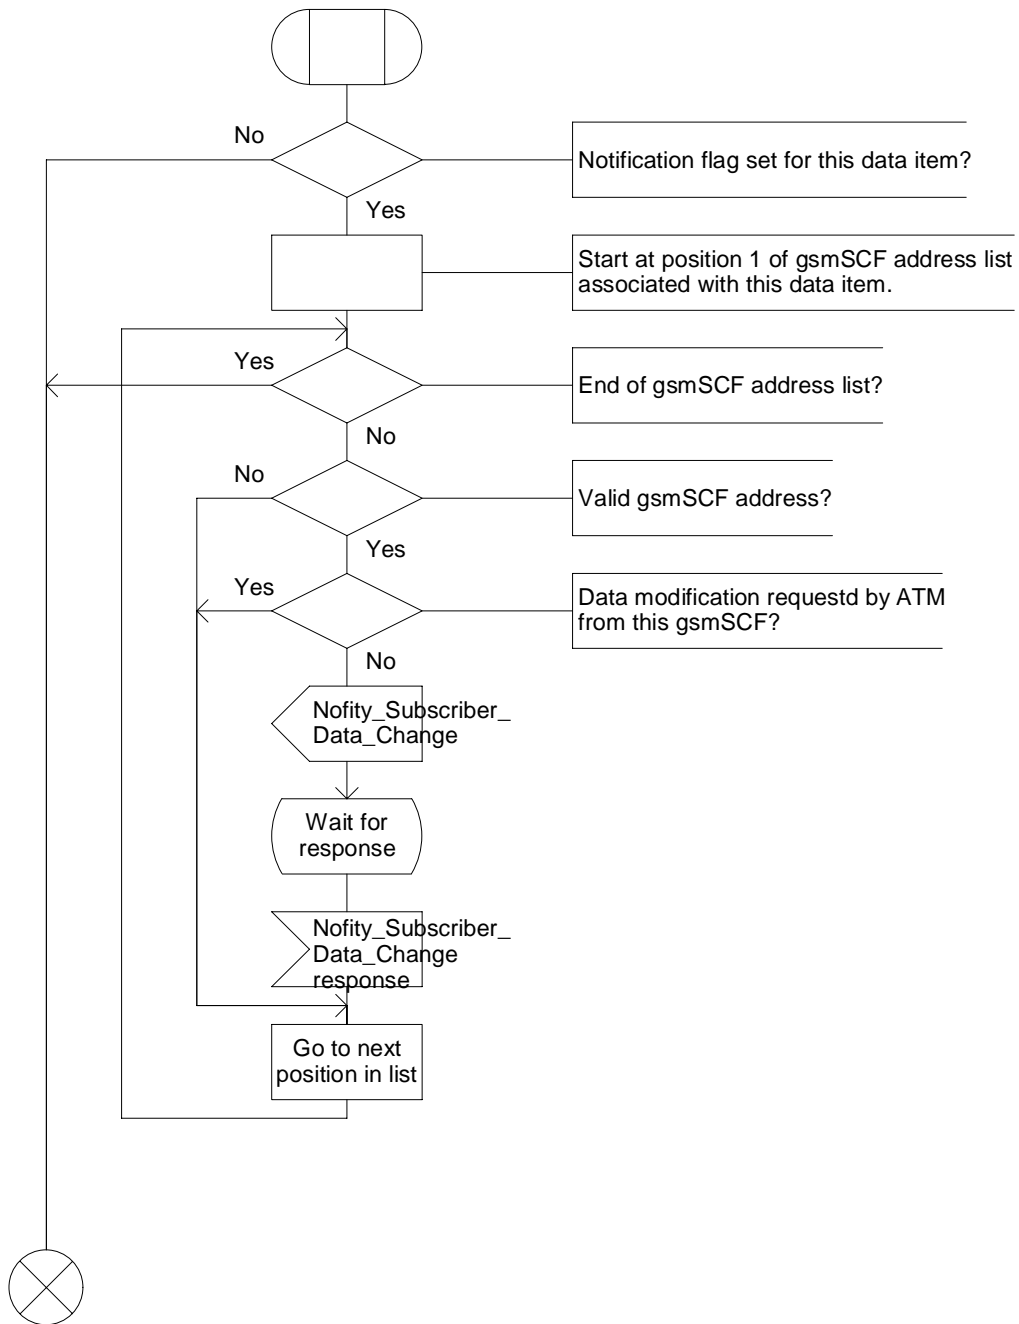

Figure 10.9a: Procedure CAMEL\_NSDC\_HLR (sheet 1)

## 10.3 Description of information flows

This subclause contains the detailed description of the information flows used by CAMEL for control and interrogation of subscription data.

Each Information Element (IE) is marked as Mandatory (M), Conditional (C), Specific conditions (S), mutually Exclusive (E) or Optional (O).

An 'M' IE shall always be included. A 'C' IE shall be included if the sending entity has the necessary information to populate the IE. The conditions for the inclusion of an 'S' IE are shown in the 'Description' column of the definition table. An 'O' IE may be included or omitted as required by the service logic. This categorization is a functional classification, i.e. it defines the requirements for the stage 2 information. It is not a stage 3 classification to be used for the ASN.1 syntax of the protocol.

The following principles apply for the handling of the IEs by the receiving entity:

- The gsmSCF may silently discard any IE which it does not functionally support.
- The HLR shall return an error if it does not functionally support an IE which it receives.

Details of errors and exceptions to these rules are specified in 3GPP TS 29.002 [32].

### 10.3.1 gsmSCF to HLR information flows

#### 10.3.1.1 Any Time Modification Request

##### 10.3.1.1.1 Description

This IF is used to modify information in the HLR at any time.

##### 10.3.1.1.2 Information Elements

Information element name	Status	Description
gsmSCF Address	M	This IE indicates the address of the interrogating gsmSCF.
Subscriber Identity	M	This IE identifies the subscriber for which the information is requested. The identity shall be either: <ul style="list-style-type: none"> <li>- IMSI, or</li> <li>- MSISDN</li> </ul>
Modification Request For Call Forwarding SS Data	E	This IE is described in a table below. This IE indicates the data of Call Forwarding data to be modified.
Modification Request For Call Barring SS Data	E	This IE is described in a table below. This IE indicates the data of call barring data to be modified.
Modification Request For Operator Determined Barring Data	E	This IE is described in a table below. This IE indicates the data of operator determined barring data to be used.
Modification Request For CAMEL Subscription Information	E	This IE is described in a table below. This IE indicates the Modification Request for CAMEL Subscription Information.

Modification Request For Call Forwarding SS Data contains the following information elements:

Information element name	Status	Description
SS Code	M	This IE indicates Call Forwarding supplementary service as defined in 3GPP TS 22.004 [2]. Due to a restriction of the Any Time Modification acknowledgement IF, only the following supplementary service codes are allowed for this IE; <ul style="list-style-type: none"> <li>- call forwarding unconditional;</li> <li>- call forwarding on mobile subscriber busy;</li> <li>- call forwarding on no reply;</li> <li>- call forwarding on mobile subscriber not reachable.</li> </ul>
Basic Service	O	See 3GPP TS 29.002 [32].
SS Status	O	See 3GPP TS 23.011 [9]. Provisioning and withdrawal are not allowed for the gsmSCF.
Forwarded-to Number	O	See 3GPP TS 23.082 [19].
Forwarded-to Subaddress	O	See 3GPP TS 29.002 [32].
No Reply Condition Time	O	See 3GPP TS 23.082 [19].
Modify Notification Flag	O	This IE contains an instruction to activate or de-activate the Notification-to-CSE flag.

Modification Request For Call Barring SS Data contains the following information elements:

Information element name	Status	Description
SS Code	M	This IE indicates Call Barring supplementary service as defined in 3GPP TS 22.004 [2]. Due to a restriction of the Any Time Modification acknowledgement IF, only the following supplementary service codes are allowed for this IE; <ul style="list-style-type: none"> <li>- barring of all outgoing calls;</li> <li>- barring of outgoing international calls;</li> <li>- barring of outgoing international calls except those directed to the home PLMN;</li> <li>- barring of all incoming calls;</li> <li>- barring of incoming calls when roaming outside home PLMN Country.</li> </ul>
Basic Service	O	See 3GPP TS 29.002 [32].
SS Status	O	See 3GPP TS 23.011 [9]. Provisioning and withdrawal are not allowed for the gsmSCF.
Password	O	See 3GPP TS 23.011 [9].
Wrong password attempts counter	O	See 3GPP TS 23.011 [9].
Modify Notification Flag	O	This IE contains an instruction to activate or de-activate the Notification-to-CSE flag.

Modification Request For Operator Determined Barring Data contains the following information elements:

Information element name	Status	Description
ODB data	O	This IE contains ODB General Data and ODB HPLMN Specific Data to be imposed by this IF.
Modify Notification Flag	O	This IE contains an instruction to activate or de-activate the Notification-to-CSE flag.

Modification Request For CAMEL Subscription Information contains the following information elements:

Information element name	Status	Description
Requested CSI	M	This IE indicates which CSI shall be modified. Only one CSI may be changed in one ATM Request.
Modify Notification Flag	O	This IE contains an instruction to activate or de-activate the Notification-to-CSE flag.
Modify CSI State	O	This IE contains an instruction to activate or de-activate the CSI.

### 10.3.1.2 Any Time Subscription Interrogation Request

#### 10.3.1.2.1 Description

This IF is used to request subscription information from the HLR at any time.

#### 10.3.1.2.2 Information Elements

Information element name	Status	Description
GsmSCF Address	M	This IE indicates the address of the interrogating gsmSCF.
Requested Info	M	This IE indicates the type of subscriber information being requested: This shall consist of one or more of the following list: <ul style="list-style-type: none"> <li>- supplementary service; this information is described in a table below,</li> <li>- Operator Determined Barring;</li> <li>- CAMEL Subscription Information; this information is described in a table below,</li> <li>- supported CAMEL phases in VLR;</li> <li>- supported CAMEL phases in SGSN.</li> </ul>
Subscriber Identity	M	This IE identifies the subscriber for which the information is requested. The identity shall be either: <ul style="list-style-type: none"> <li>- IMSI, or</li> <li>- MSISDN.</li> </ul>

Supplementary service contains the following information elements:

Information element name	Status	Description
SS Code	M	This IE indicates a supplementary service as defined in 3GPP TS 22.004 [2]. Due to a restriction of the Any Time Subscription Interrogation acknowledgement IF, only the following supplementary service codes are allowed for this IE; <ul style="list-style-type: none"> <li>- call forwarding unconditional;</li> <li>- call forwarding on mobile subscriber busy;</li> <li>- call forwarding on no reply;</li> <li>- call forwarding on mobile subscriber not reachable;</li> <li>- barring of all outgoing calls;</li> <li>- barring of outgoing international calls;</li> <li>- barring of outgoing international calls except those directed to the home PLMN;</li> <li>- barring of all incoming calls;</li> <li>- barring of incoming calls when roaming outside home PLMN Country.</li> </ul>
Basic Service	O	See 3GPP TS 29.002 [32].

CAMEL subscription information shall contain one of the following information elements:

Information element name	Status	Description
CAMEL Subscription Info	S,E	This IE indicates which CAMEL Subscription Information is requested. It shall be one of the following elements: O-CSI/T-CSI/VT-CSI/TIF-CSI/GPRS-CSI/MO-SMS-CSI/SS-CSI/M-CSI/D-CSI.
Additional Requested CAMEL Subscription Info	S,E	This IE indicates which CAMEL Subscription Information is requested. It shall be one of the following elements: MT-SMS-CSI/ MG-CSI.

### 10.3.1.3 Notify Subscriber Data Change response

#### 10.3.1.3.1 Description

This IF is used by the gsmSCF to respond to the HLR of the change of subscriber data notify.

#### 10.3.1.3.2 Information Elements

This IF contains no information elements.

## 10.3.2 HLR to gsmSCF information flows

### 10.3.2.1 Any Time Modification ack

#### 10.3.2.1.1 Description

This IF is used by the HLR to provide the modified information to the gsmSCF.

#### 10.3.2.1.2 Information Elements

Information element name	Status	Description
Call Forwarding SS Data	S	This IE is described in a table below. It shall be present if it was modified.
Call Barring SS Data	S	This IE is described in a table below. It shall be present if it was modified.
Operator Determined Barring Information	S	This IE is described in a table below. It shall be present if it was modified.
CAMEL Subscription Information	S	This IE is described in a table below. It shall be present if it was modified.

Call Forwarding SS Data contains the following information elements:

Information element name	Status	Description
SS Code	S	This IE indicates Call Forwarding supplementary service as defined in 3GPP TS 22.004 [2]. Only the SS code for which the modification applies is sent.
Forwarding Feature List	S	This IE is described in a table below. If a Forwarding Feature List item is modified then all applicable fields within the item shall be sent. All modified Forwarding Feature List items shall be returned.
Notification-to-CSE Flag	S	This IE indicates whether the gsmSCF is notified of a change of Call Forwarding SS data. The IE shall be sent if it was modified.

Forwarding Feature List contains 1 to 32 items of the following information elements:

Information element name	Status	Description
Basic Service	C	See 3GPP TS 29.002 [32].
SS Status	C	See 3GPP TS 23.011 [9].
Forwarded-to Number	C	See 3GPP TS 23.082 [19].
Forwarded-to Subaddress	C	See 3GPP TS 29.002 [32].
Subscription Options	C	See 3GPP TS 23.082 [19].
No Reply Condition Timer	C	See 3GPP TS 23.082 [19].

Call Barring SS Data contains the following information elements:

Information element name	Status	Description
SS Code	S	This IE indicates Call Barring supplementary service as defined in 3GPP TS 22.004 [2]. Only the SS code for which the modification applies is sent.
Call Barring Feature List	S	This IE is described in a table below. If a Call Barring Feature List item is modified then all applicable fields within the item shall be sent. All modified Call Barring Feature List items shall be returned.
Password	S	See 3GPP TS 23.011 [9]. The IE shall be sent if it was modified.
Wrong Password Attempts Counter	S	See 3GPP TS 23.011 [9]. The IE shall be sent if it was modified.
Notification-to-CSE Flag	S	This IE indicates whether the gsmSCF is notified of a change of Call Barring SS data. The IE shall be sent if it was modified.

Call Barring Feature List contains 1 to 32 items of the following information elements:

Information element name	Status	Description
Basic Service	C	See 3GPP TS 29.002 [32].
SS Status	C	See 3GPP TS 23.011 [9].

Operator Determined Barring Information contains the following information elements:

Information element name	Status	Description
ODB Data	C	See subclause 10.3.2.3
Notification-to-CSE Flag	C	This IE indicates whether the gsmSCF is notified of a change of ODB data.

CAMEL Subscription Information contains the following information elements:

Information element name	Status	Description
O—CSI	S	See subclause 4.3.1. It shall be present if it was modified.
D—CSI	S	See subclause 4.3.2. It shall be present if it was modified.
T—CSI	S	See subclause 4.3.5. It shall be present if it was modified.
VT—CSI	S	See subclause 4.3.6. It shall be present if it was modified.
TIF—CSI	S	See subclause 4.3.4. It shall be present if it was modified.
GPRS—CSI	S	See subclause 6.3.1. It shall be present if it was modified.
MO—SMS—CSI	S	See subclause 7.3.1. It shall be present if it was modified.
MT—SMS—CSI	S	See subclause 7.3.2. It shall be present if it was modified.
SS—CSI	S	See subclause 8.2.1. It shall be present if it was modified.
M—CSI	S	See subclause 9.2.1. It shall be present if it was modified.
MG—CSI	S	See subclause 9.2.2. It shall be present if it was modified.

### 10.3.2.2 Any Time Subscription Interrogation ack

#### 10.3.2.2.1 Description

This IF is used by the HLR to provide the requested subscription information to the gsmSCF.

#### 10.3.2.2.2 Information Elements

Information element name	Status	Description
Call Forwarding SS Data	C	This IE is described in a table below.
Call Barring SS Data	C	This IE is described in a table below.
Operator Determined Barring Data	C	This IE is described in a table below.
CAMEL Subscription Information	C	This IE is described in a table below.
Supported CAMEL Phases In VLR	C	This IE indicates the CAMEL phase supported in the VLR.
Supported CAMEL4 Subsets In VLR	S	This IE indicates the CAMEL phase 4 subsets supported in the VMSC/VLR. It shall be present if the "Supported CAMEL Phases In VLR" IE indicates CAMEL phase 4.
Supported CAMEL Phases In SGSN	C	This IE indicates the CAMEL phase supported in the SGSN.
Supported CAMEL4 Subsets In SGSN	S	This IE indicates the CAMEL phase 4 subsets supported in the SGSN. It shall be present if the "Supported CAMEL Phases In SGSN" IE indicates support of CAMEL phase 4.

Call Forwarding SS Data contains the following information elements:

Information element name	Status	Description
Forwarding Feature List	C	This IE is described in a table below
Notification-to-CSE Flag	C	This IE indicates whether the gsmSCF is notified of a change of Call Forwarding SS data.

Forwarding Feature List contains 1 to 32 items of the following information elements:

Information element name	Status	Description
Basic Service	C	See 3GPP TS 29.002 [32].
SS Status	C	See 3GPP TS 23.011 [9].
Forwarded-to Number	C	See 3GPP TS 23.082 [19].
Forwarded-to Subaddress	C	See 3GPP TS 29.002 [32].
Subscription Options	C	See 3GPP TS 23.082 [19].
No Reply Condition Time	C	See 3GPP TS 23.082 [19].

Call Barring SS Data contains the following information elements:

Information element name	Status	Description
Call Barring Feature List	C	This IE is described in a table below.
Password	C	See 3GPP TS 23.011 [9].
Wrong Password Attempts Counter	C	See 3GPP TS 23.011 [9].
Notification-to-CSE Flag	C	This IE indicates whether the gsmSCF is notified of a change of Call Barring SS data.

Call Barring Feature List contains 1 to 32 items of the following information elements:

Information element name	Status	Description
Basic Service	C	See 3GPP TS 29.002 [32].
SS Status	C	See 3GPP TS 23.011 [9].

Operator Determined Barring Data contains the following information elements:

Information element name	Status	Description
ODB General Data	C	This IE indicates the set of subscribers features that the network operator or the service provider can regulate.
ODB HPLMN Specific Data	C	This IE indicates the set of subscribers features that the network operator or the service provider can regulate only when the subscriber is registered in the HPLMN.
Notification-to-CSE Flag	C	This IE indicates whether the gsmSCF is notified of a change of ODB data.

CAMEL Subscription Information contains the following information elements:

Information element name	Status	Description
O—CSI	C	See subclause 4.3.1.
D—CSI	C	See subclause 4.3.2.
T—CSI	C	See subclause 4.3.5.
VT—CSI	C	See subclause 4.3.6.
TIF—CSI	C	See subclause 4.3.4.
GPRS—CSI	C	See subclause 6.3.1.
MO—SMS—CSI	C	See subclause 7.3.1.
MT—SMS—CSI	C	See subclause 7.3.2.
SS—CSI	C	See subclause 8.2.1.
M—CSI	C	See subclause 9.2.1.
MG—CSI	C	See subclause 9.2.2.

### 10.3.2.3 Notify Subscriber Data Change

#### 10.3.2.3.1 Description

This IF is used by the HLR to notify to the gsmSCF of the change of subscriber data. This IF is sent at each time subscriber data is changed.

## 10.3.2.3.2 Information Elements

Information element name	Status	Description
IMSI	M	The IMSI is used to identify the subscriber.
MSISDN	M	The MSISDN is used to identify the subscriber.
Call Forwarding SS Data	C	This IE is described in a table below.
Call Barring SS Data	C	This IE is described in a table below.
Operator Determined Barring Data	C	This IE is described in a table below.
CAMEL Subscription Information	C	This IE is described in a table below.

Call Forwarding SS data contains the following information elements:

Information element name	Status	Description
SS Code	C	This IE indicates Call Forwarding supplementary service as defined in 3GPP TS 22.004 [2].
Forwarding Feature List	C	This IE is described in a table below.
Notification-to-CSE Flag	C	This IE indicates whether the gsmSCF is notified of a change of Call Forwarding SS data.

Forwarding Feature List contains 1 to 32 items of the following information elements:

Information element name	Status	Description
Basic Service	C	See 3GPP TS 29.002 [32]. Compound basic service codes can also be used in this IF if the subscriber has used a compound code when modifying the SS (e.g. all bearer services compound code).
SS Status	C	See 3GPP TS 23.011 [9].
Forwarded-to Number	C	See 3GPP TS 23.082 [19].
Forwarded-to Subaddress	C	See 3GPP TS 29.002 [32].
Subscription Options	C	See 3GPP TS 23.082 [19].
No Reply Condition Timer	C	See 3GPP TS 23.082 [19].

Call Barring SS data contains the following information elements:

Information element name	Status	Description
SS Code	C	This IE indicates Call Barring supplementary service as defined in 3GPP TS 22.004 [2].
Call Barring Feature List	C	This IE is described in a table below.
Password	C	See 3GPP TS 23.011 [9].
Wrong Password Attempts Counter	C	See 3GPP TS 23.011 [9].
Notification-to-CSE Flag	C	This IE indicates whether the gsmSCF is notified of a change of Call Barring SS data.

Call Barring Feature List contains 1 to 32 items of the following information elements:

Information element name	Status	Description
Basic Service	C	See 3GPP TS 29.002 [32]. Compound basic service codes can also be used in this IF if the subscriber has used a compound code when modifying the SS (e.g. all bearer services compound code).
SS Status	C	See 3GPP TS 23.011 [9].

Operator Determined Barring Data contains the following information elements:

Information element name	Status	Description
ODB General Data	C	This IE indicates the set of subscribers features that the network operator or the service provider can regulate. When the ODB general data is removed for the subscriber, this IE indicates that the set of subscribers features is empty.
ODB HPLMN Specific Data	C	This IE indicates the set of subscribers features that the network operator or the service provider can regulate only when the subscriber is registered in the HPLMN. When the ODB HPLMN specific data is removed for the subscriber, this IE indicates that the set of subscribers features is empty.
Notification-to-CSE Flag	C	This IE indicates whether the gsmSCF is notified of a change of ODB data.

CAMEL Subscription Information contains the following information elements:

Information element name	Status	Description
O-CSI	S	See subclause 4.3.1. It shall be present if it was modified.
D-CSI	S	See subclause 4.3.2. It shall be present if it was modified.
T-CSI	S	See subclause 4.3.5. It shall be present if it was modified.
VT-CSI	S	See subclause 4.3.6. It shall be present if it was modified.
TIF-CSI	S	See subclause 4.3.4. It shall be present if it was modified.
GPRS-CSI	S	See subclause 6.3.1. It shall be present if it was modified.
MO-SMS-CSI	S	See subclause 7.3.1. It shall be present if it was modified.
MT-SMS-CSI	S	See subclause 7.3.2. It shall be present if it was modified.
SS-CSI	S	See subclause 8.2.1. It shall be present if it was modified.
M-CSI	S	See subclause 9.2.1. It shall be present if it was modified.
MG-CSI	S	See subclause 9.2.2. It shall be present if it was modified.
Specific CSI Deleted List	S	This IE indicates that one or more specific elements of CAMEL Subscription Information have been deleted from the HLR. It shall indicate any of the following; <ul style="list-style-type: none"> <li>- O-CSI (with TDP criteria for O-CSI);</li> <li>- T-CSI (with TDP criteria for T-CSI);</li> <li>- TIF-CSI;</li> <li>- D-CSI;</li> <li>- VT-CSI with TDP criteria for VT-CSI;</li> <li>- GPRS-CSI;</li> <li>- MO-SMS-CSI;</li> <li>- MT-SMS-CSI with TDP criteria for MT-SMS-CSI;</li> <li>- SS-CSI;</li> <li>- M-CSI;</li> <li>- MG-CSI.</li> </ul> This IE shall be present if CSI is/are deleted.

## 11 Subscriber Location and State retrieval

Support of the procedures described in this clause in CAMEL Phase 4 is a network operator option.

### 11.1 Architecture

#### 11.1.1 Functional Entities used for CAMEL

This subclause describes procedures for the retrieval of subscriber location and subscriber state information. Location Services is only supported in CAMEL Phase 3 and higher.

- 1) The gsmSCF may request location information of a mobile station from the GMLC via Location Services. The information flow of Location Services is described in 3GPP TS 23.271 [26] and 25.205 [30]. Figure 11.1a indicates the functional entities involved in the procedures for the retrieval of location information via location services.

- 2) The gsmSCF may request location information and/or subscriber state information of a mobile station from the HLR. Location information and/or subscriber state information may be requested either from the circuit switched or the packet switched domain.

If location information and/or subscriber state information is requested by the gsmSCF, then the HLR may retrieve this information via the Provide Subscriber Information procedure from either the MSC/VLR or the SGSN. This procedure is defined in subclause 4.5.9 of the present document.

The interface for the provision of subscriber location and state information between HLR and MSC/VLR is described in 3GPP TS 23.018 [12]. The interface for the provision of subscriber location and state information between HLR and SGSN is described in this chapter. Figure 11.1b indicates the functional entities involved in the procedures for the retrieval of location information and/or subscriber state information from the circuit switched or packet switched domain.

Figure 11.1a: Functional architecture for CAMEL Support of Location Services

Figure 11.1b: Functional architecture for Any Time Interrogation

**gsmSCF:** see subclause 3.1.

**GMLC:** A functional entity that allows external LCS Clients to request real-time information about a Mobile Station. The information that can be requested from the GMLC is the location of the mobile station.

**HLR:** see subclause 4.1.

**MSC/VLR:** see subclause 4.1.

**SGSN:** see subclause 6.1.1. The SGSN stores location and state information for each subscriber. Upon request this information is provided to the HLR.

The information flows between the GMLC and functional entities other than the gsmSCF, have not been indicated in the functional architecture shown in figures 11.1. These information flows are outside the scope of the present document.

## 11.1.2 Interfaces defined for CAMEL

This subclause describes the interfaces applicable to CAMEL. It specifies on a high level the functions specific to CAMEL.

### 11.1.2.1 gsmSCF - GMLC interface

This interface is used by the gsmSCF to request information (Mobile Station location) from the GMLC at any time.

### 11.1.2.2 GMLC - gsmSCF interface

This interface is used by the GMLC to return the requested information (Mobile Station location) to the gsmSCF as requested by the gsmSCF via the Any Time Interrogation procedure.

### 11.1.2.3 gsmSCF - HLR

This interface is used by the gsmSCF to interrogate the HLR. As a network operator option, the HLR may refuse to provide the information requested by the gsmSCF.

### 11.1.2.4 HLR - gsmSCF

This interface is used by the HLR to return the requested information (Mobile Station location and/or Mobile Station state) to the gsmSCF as requested by the gsmSCF via the Any Time Interrogation procedure.

### 11.1.2.5 HLR – SGSN

This interface is used by the HLR to request information (Mobile station location and/or subscriber state) from the SGSN.

### 11.1.2.5 SGSN – HLR

This interface is used by the SGSN to return the requested information (Mobile station location and/or subscriber state) to the HLR.

## 11.2 Procedures for CAMEL

### 11.2.1 Location Services

Handling of Any Time Interrogation to obtain Location Information involves the following process:

- CAMEL\_ATI\_GMLC.

If an OSS needs to retrieve the active location of a Mobile Station, the gsmSCF initiates a transaction to the GMLC by sending a Any Time Interrogation Request.

### Process CAMEL\_ATI\_GMLC

1(1)

/\* Process in the GMLC Receiving an Any Time Interrogation request from the gsmSCF. \*/

/\* Signals to/from the left are to/from the gsmSCF. \*/

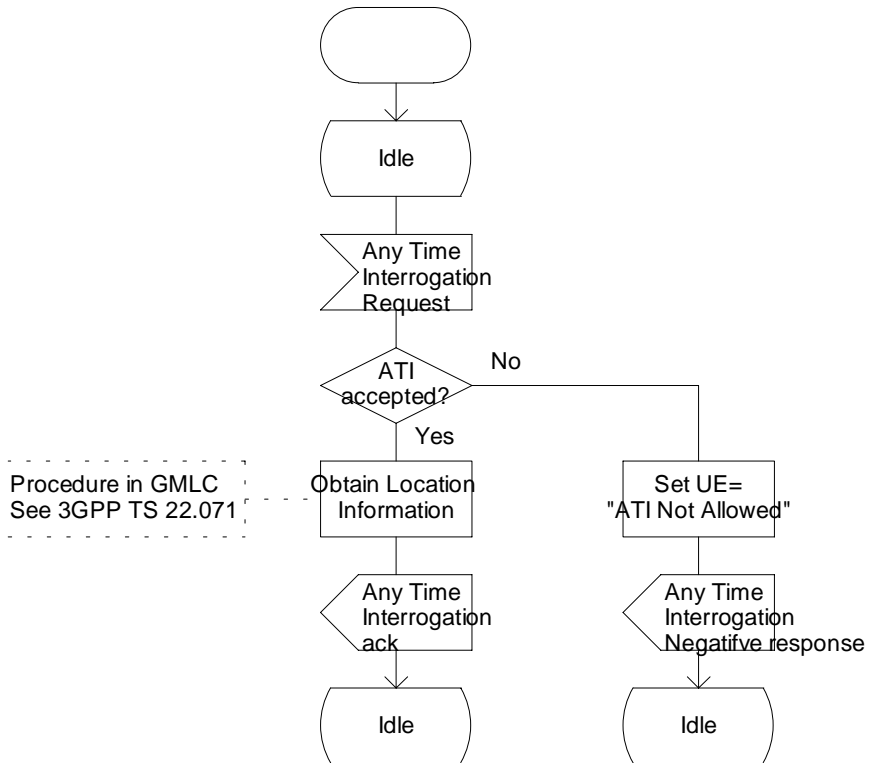

Figure 11.2a: Process CAMEL\_ATI\_GMLC (sheet 1)

## 11.2.2 Any Time Interrogation

Handling of Any Time Interrogation to obtain Subscriber State and Location Information involves the following process:

- CAMEL\_ATI\_HLR.

If an OSS needs the Subscriber State and/or the Location Information, the gsmSCF initiates a transaction to the HLR by sending an Any\_Time\_Interrogation Request.

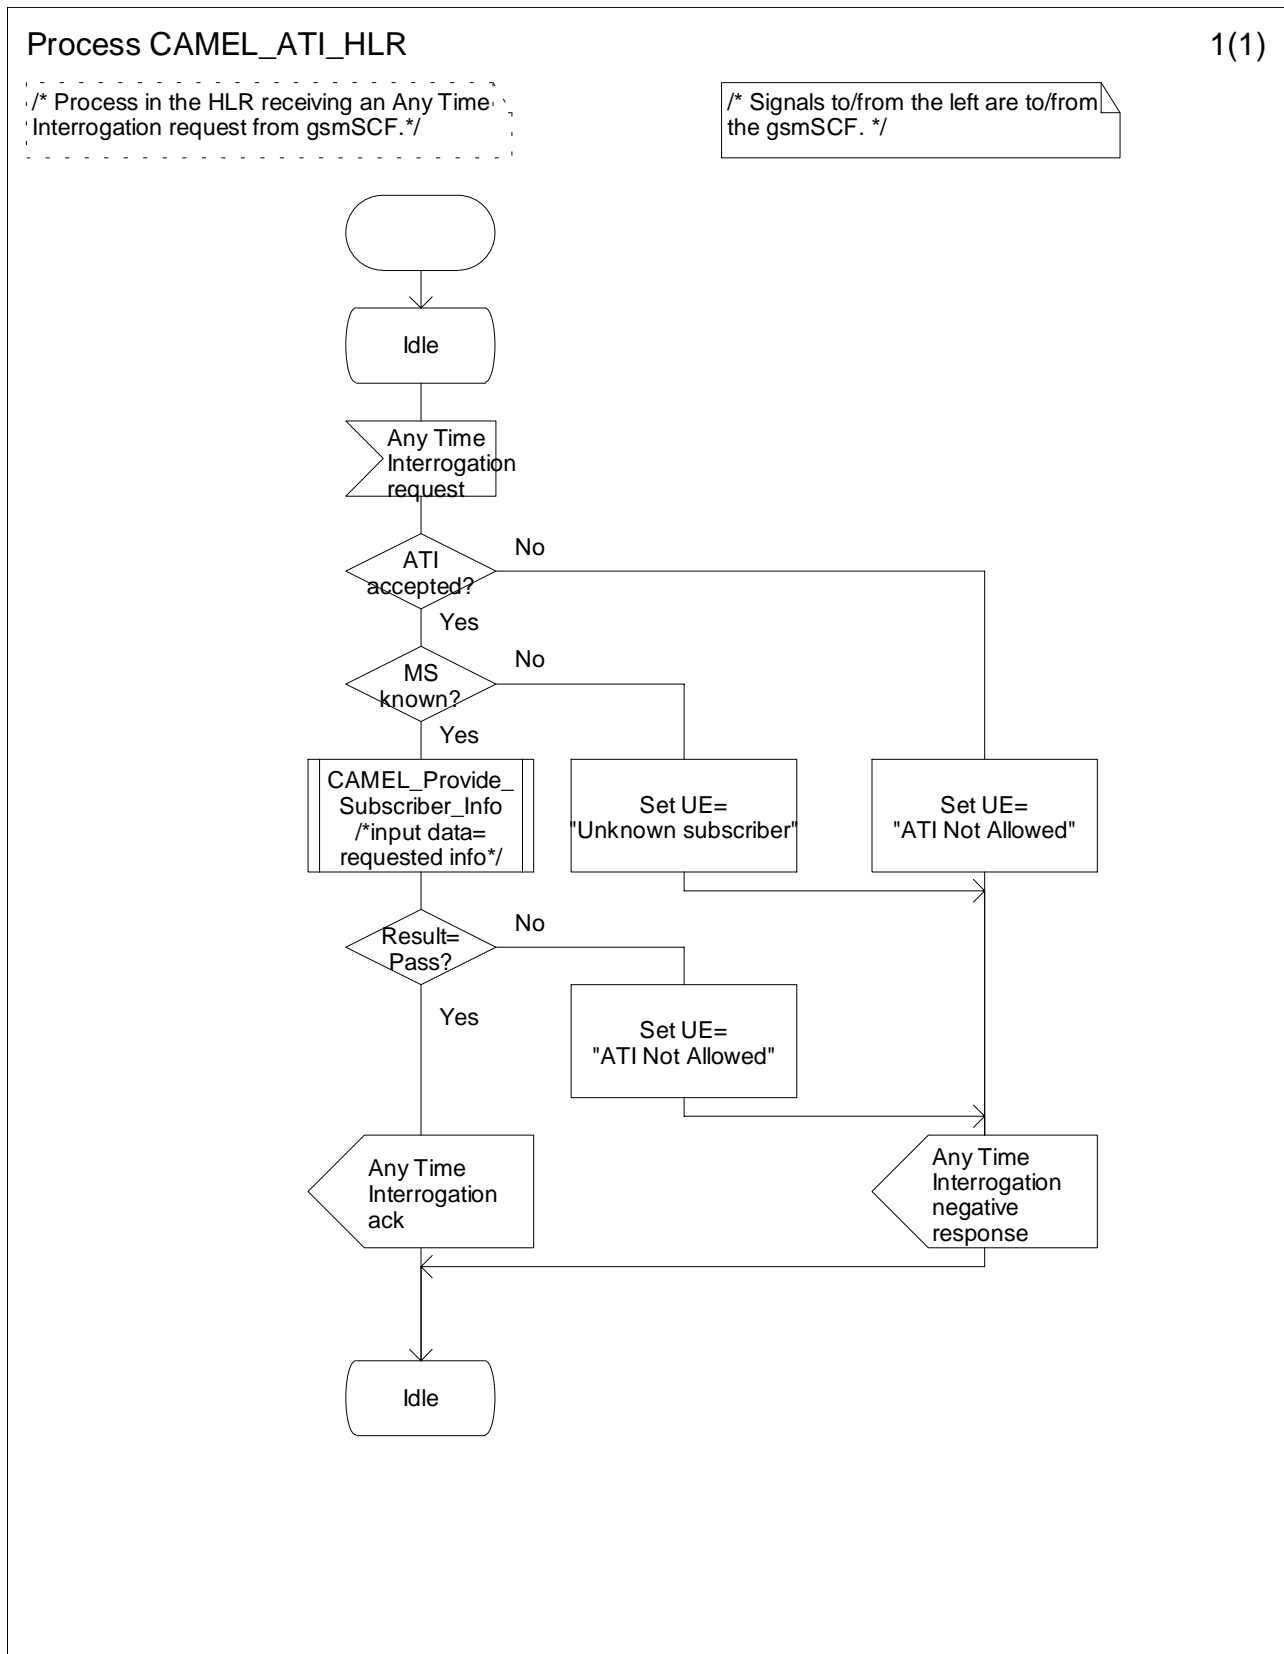

Figure 11.3a: Process CAMEL\_ATI\_HLR (sheet 1)

### 11.2.3 Provide Subscriber Information in the SGSN

The provision of Subscriber State and Location Information involves the following process and procedures:

- CAMEL\_Provide\_Subscriber\_Info\_SGSN;
- CAMEL\_Active\_Info\_Retrieval\_SGSN;
- Retrieve\_GPRS\_MS\_Class\_If\_Required;
- Retrieve\_IMEI\_If\_Required.

#### 11.2.3.1 Procedure CAMEL\_Provide\_Subscriber\_Info\_SGSN

If the SGSN receives a Provide Subscriber Info request, it performs procedures to obtain the requested information.

The test "Active retrieval required" takes the "Yes" exit if any one or more of current location, GPRS MS class or IMEI is indicated in the Provide Subscriber Info request.

#### 11.2.3.2 Procedure CAMEL\_Active\_Info\_Retrieval\_SGSN

If the SGSN data show that the MS is in the "Iu Connected" state (i.e. it has an Iu connection established), the SGSN performs the Location Reporting Control procedure (Direct report) which is defined in 3GPP TS 25.413 [31].

The test "Report on change of service area" takes the "Yes" exit if the SGSN has performed the Location Reporting Control procedure with the Request Type IE set to "Change of service area".

If the SGSN data show that the MS is in the "A/Gb Ready" state (i.e. it is transferring packet data over an A/Gb access connection) then the currently stored location information is up to date, and no further action is required.

Process CAMEL\_Provide\_Subscriber\_Info\_SGSN

1(1)

/\* Process in the SGSN to handle a request from the HLR for subscriber information. \*/

/\* Signals to/from the left are to/from the HLR. \*/

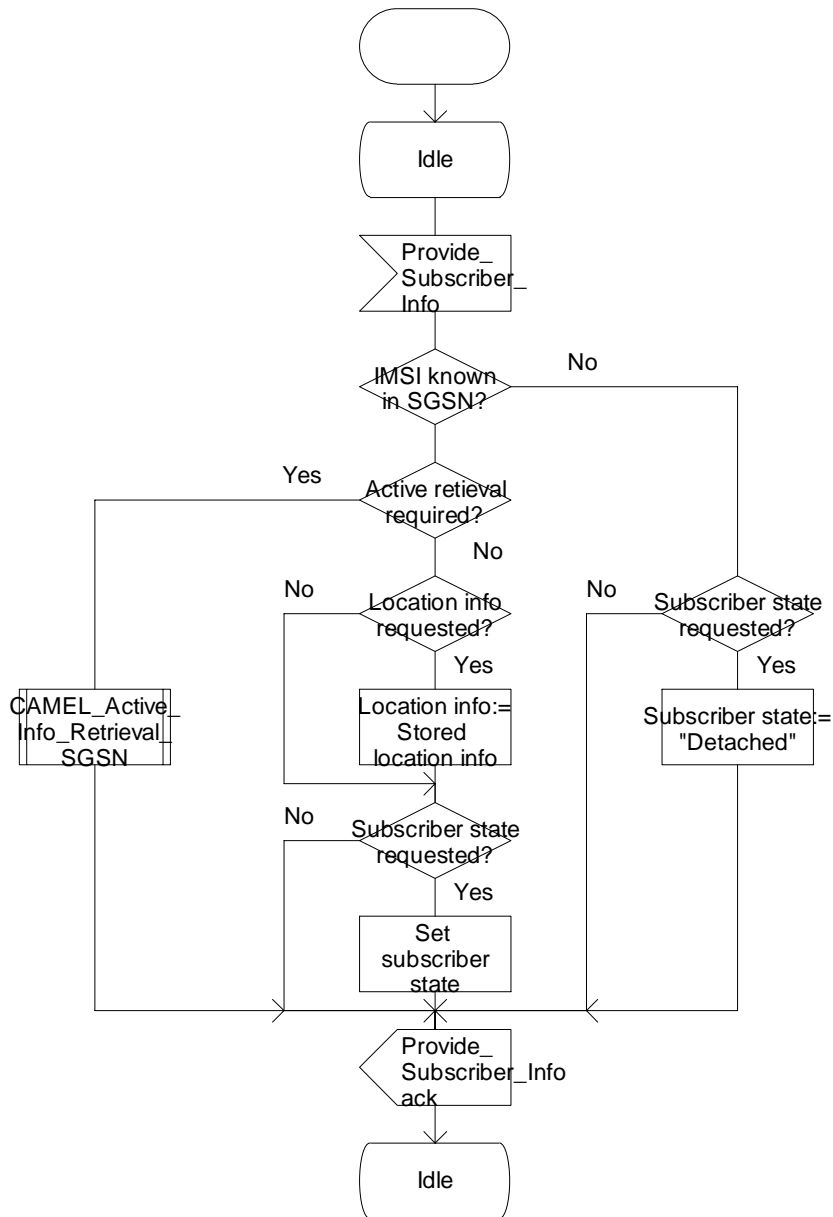

Figure 11.4a: Process CAMEL\_Provide\_Subscriber\_Info\_SGSN (sheet 1)

Procedure CAMEL\_Active\_Info\_Retrieval\_SGSN

1(2)

/\* Procedure in the SGSN to retrieve information by establishing a connection with the MS

/\* Signals to/from the left are to/from the RAN \*/

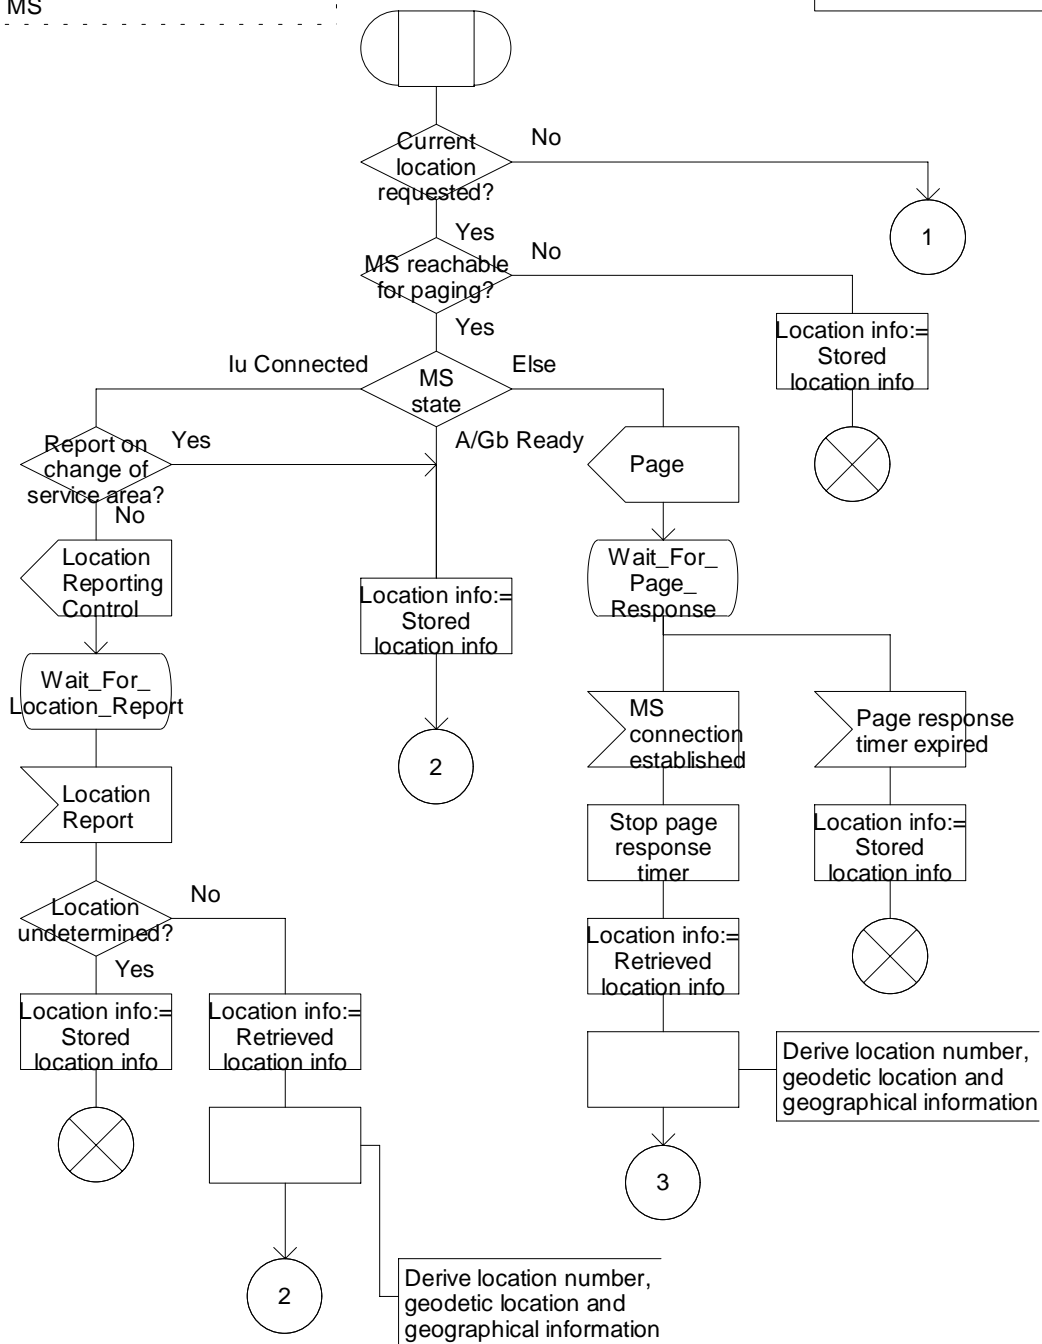

Figure 11.5a: Procedure CAMEL\_Active\_Info\_Retrieval\_SGSN (sheet 1)

### Procedure CAMEL\_Active\_Info\_Retrieval\_SGSN

2(2)

/\* Procedure in the SGSN to retrieve information by establishing a connection with the MS

/\* Signals to/from the left are to/from the RAN \*/

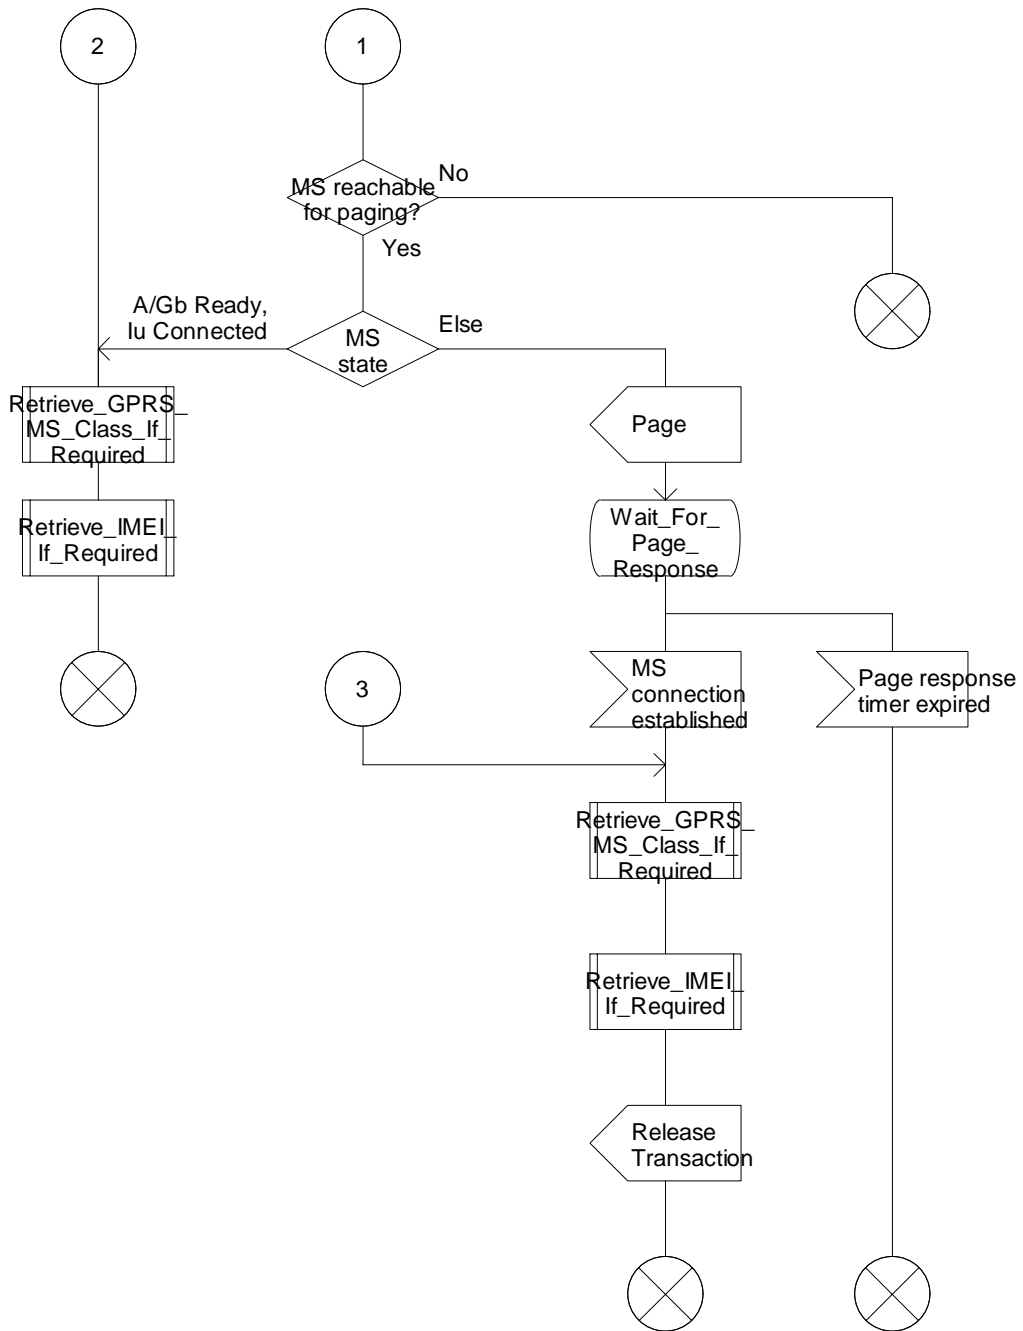

Figure 11.5b: Procedure CAMEL\_Active\_Info\_Retrieval\_SGSN (sheet 2)

### Procedure Retrieve\_GPRS\_MS\_Class\_If\_Required

1(1)

Procedure in the SGSN to retrieve GPRS classmark information if required by the HLR

Figure 11.6a: Procedure Retrieve\_GPRS\_MS\_Class\_If\_Required (sheet 1)

### Procedure Retrieve\_IMEI\_If\_Required

1(1)

Procedure in the SGSN to retrieve the IMEI if required by the HLR

/\* Signals to/from the left are to/from the RAN \*/

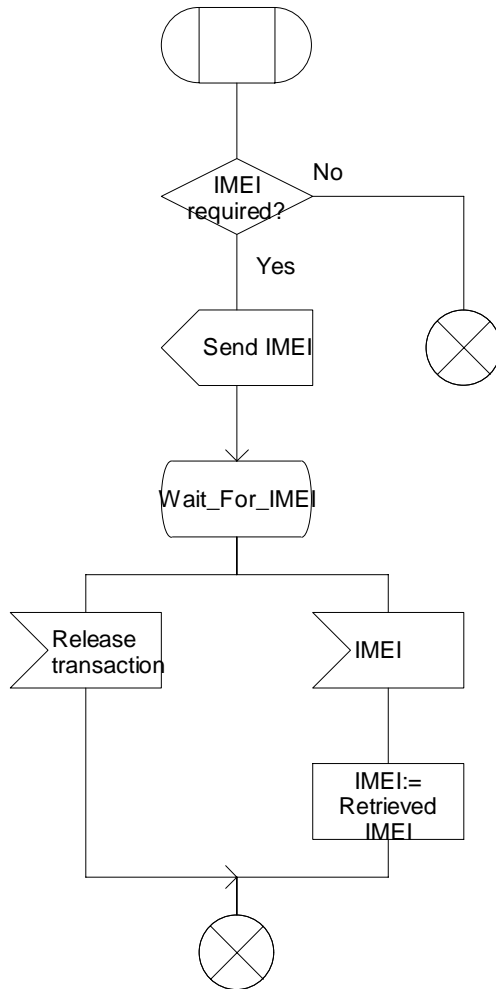

Figure 11.7a: Procedure Retrieve\_IMEI\_If\_Required (sheet 1)

## 11.3 Description of information flows

This subclause contains the detailed description of the information flows used by CAMEL for the retrieval of information about the location and state of a subscriber.

Each Information Element (IE) is marked as Mandatory (M), Conditional (C), Specific conditions (S), mutually Exclusive (E) or not applicable (-).

An 'M' IE shall always be included. A 'C' IE shall be included if the sending entity has the necessary information to populate the IE. The conditions for the inclusion of an 'S' IE are shown in the 'Description' column of the definition table. When a set of 'E' IEs is shown in the definition of an Information Flow or compound IE, only one of those IEs may be included. A '-' IE shall always be omitted. This categorization is a functional classification, i.e. it defines the requirements for the stage 2 information. It is not a stage 3 classification to be used for the ASN.1 syntax of the protocol.

The following principles apply for the handling of the IEs by the receiving entity:

- The gsmSCF may silently discard any IE which it does not functionally support.
- The GMLC shall return an error if it does not functionally support an IE which it receives.

Details of errors and exceptions to these rules are specified in 3GPP TS 29.002 [32].

### 11.3.1 gsmSCF to GMLC information flows

#### 11.3.1.1 Any Time Interrogation Request

##### 11.3.1.1.1 Description

This IF is used to request information (Mobile Station location) from the GMLC.

##### 11.3.1.1.2 Information Elements

Information element name	Status	Description
gsmSCF Address	M	This IE indicates the address of the interrogating gsmSCF.
Requested Info	M	This IE indicates the type of information that is requested. It shall have the following value: - Mobile Station location
Mobile Station Identity	M	This IE identifies the Mobile Station of which the information is requested. The identity shall be either: - IMSI, or - MSISDN

### 11.3.2 GMLC to gsmSCF information flows

#### 11.3.2.1 Any Time Interrogation ack

##### 11.3.2.1.1 Description

This IF is used by the GMLC to provide the requested information to the gsmSCF.

##### 11.3.2.1.2 Information Elements

Information element name	Status	Description
Location Information	C	This IE indicates the location of the Mobile Station.

Location Information is defined in 3GPP TS 23.018 [12]. The following differences apply:

Information element name	Status	Description
Location number	-	Not applicable
Service area ID	-	Not applicable
Cell ID	-	Not applicable
Geographical information	C	See 3GPP TS 23.032 [13]. The GMLC receives Extended Geographical Information from the MSC. The Extended Geographical Information shall be converted to the Geographical Information by the GMLC.
VLR number	-	Not applicable
Current Location Retrieved	-	Not applicable
MSC number	C	The GMLC receives the MSC number from the HLR in the SendRoutingInfoForLCS MAP message.
SGSN number	C	The GMLC receives the SGSN number from the HLR in the SendRoutingInfoForLCS MAP message.

### 11.3.3 gsmSCF to HLR information flows

#### 11.3.3.1 Any Time Interrogation Request

##### 11.3.3.1.1 Description

This IF is used to request information (any one or more of subscriber state, subscriber location, IMEI (with software version) and MS classmark information for the requested domain) from the HLR at any time.

##### 11.3.3.1.2 Information Elements

Information element name	Status	Description
gsmSCF Address	M	This IE indicates the address of the interrogating gsmSCF.
Requested Info	M	This IE indicates the type of subscriber information being requested: <ul style="list-style-type: none"> <li>- Location Information;</li> <li>- Subscriber State;</li> <li>- Current Location;</li> <li>- IMEI (with software version);</li> <li>- MS classmark information for the requested domain.</li> </ul> Current Location shall not be present if Location Information is not present in Requested Info.
Subscriber Identity	M	This IE identifies the subscriber for which the information is requested. The identity shall be either: <ul style="list-style-type: none"> <li>- IMSI, or</li> <li>- MSISDN.</li> </ul>
Requested Domain	M	This IE indicates for which domain the subscriber info is requested: <ul style="list-style-type: none"> <li>- circuit switched domain;</li> <li>- packet switched domain.</li> </ul>

### 11.3.4 HLR to gsmSCF information flows

#### 11.3.4.1 Any Time Interrogation ack

##### 11.3.4.1.1 Description

This IF is used by the HLR to provide the requested subscriber location and/or subscriber state information to the gsmSCF.

## 11.3.4.1.2 Information Elements

Information element name	Status	Description
Location Information	C, E1	This IE indicates the location of the served subscriber in the MSC/VLR. It shall be present only if requested by the gsmSCF.
Location Information For GPRS	C, E1	This IE indicates the location of the served subscriber in the SGSN. The content is defined in the subclause 11.3.6.1.2. It shall be present only if requested by the gsmSCF.
Subscriber State	S, E2	This IE indicates the state of the MS in the CS domain. It shall be present only if requested by the gsmSCF. The possible values of the IE are: <ul style="list-style-type: none"> <li>- CAMELBusy: The VLR has indicated that the MS is engaged in a transaction for a mobile originating or terminated circuit-switched call.</li> <li>- NetworkDeterminedNotReachable: The VLR has indicated that the network can determine from its internal data that the MS is not reachable.</li> <li>- AssumedIdle: The VLR has indicated that the state of the MS is neither "CAMELBusy" nor "NetworkDeterminedNotReachable".</li> <li>- NotProvidedFromVLR: The VLR did not provide any information on subscriber state even though it was requested.</li> </ul>
PS Domain Subscriber State	S, E2	This IE indicates the state of the MS in the PS Domain. It shall be present only if requested by the gsmSCF. The possible values of the IE are: <ul style="list-style-type: none"> <li>- Detached (see subclause 11.3.5.1).</li> <li>- CAMEL attached, MS not reachable for paging (see subclause 11.3.5.1).</li> <li>- CAMEL attached, MS may be reachable for paging (see subclause 11.3.5.1).</li> <li>- CAMEL PDP active, MS not reachable for paging (see subclause 11.3.5.1).</li> <li>- CAMEL PDP active, MS may be reachable for paging (see subclause 11.3.5.1).</li> <li>- Not provided from SGSN: The SGSN did not provide any information on subscriber state even though it was requested.</li> </ul>
PDP Context Information List	C	This IE indicates the PDP context information (see the table in subclause 11.3.5.1) for each PDP context which is active for the MS. It shall be present if the PS domain Subscriber State has the value "CAMEL PDP active, MS not reachable for paging" or "CAMEL PDP active, MS may be reachable for paging"; otherwise it shall be absent.
IMEI (with software version)	C	This IE contains the IMEISV (as defined in 3GPP TS 23.003 [7]) of the ME in use by the served subscriber. It shall be present only if requested by the gsmSCF.
MS Classmark 2	C	This IE contains the MS classmark 2, which is returned by the MS when it responds to paging in the CS domain. It shall be present only if requested by the gsmSCF.
GPRS MS Class	C	This IE contains the MS network and radio access capabilities. It shall be present only if requested by the gsmSCF.

Location Information is defined in 3GPP TS 23.018 [12]. The following differences apply:

Information element name	Status	Description
Service area ID	C,E	See 3GPP TS 23.018 [12].
Cell ID	C,E	See 3GPP TS 23.018 [12].
Location area ID	C,E	See 3GPP TS 23.003 [7].
Selected LSA Identity	C	This IE indicates the LSA identity associated with the current position of the MS. It shall be present if the LSA ID in the subscriber data matches the LSA ID of the current cell. In the case of multiple matches the LSA Id with the highest priority it shall be present. See 3GPP TS 23.073 [17].
Routeing area ID	C	See 3GPP TS 23.003 [7].
SGSN number	C	See 3GPP TS 23.060 [15].

## 11.3.5 HLR to SGSN information flows

### 11.3.5.1 Provide Subscriber Info

#### 11.3.5.1.1 Description

This IF is used by the HLR to request information (subscriber state and/or location) from the SGSN at any time.

#### 11.3.5.1.2 Information Elements

This IF is defined in 3GPP TS 23.018 [12]. The following differences apply:

Information element name	Status	Description
LMSI	-	Not applicable.
Requested Info	M	This IE indicates which of the following information the HLR requires: <ul style="list-style-type: none"> <li>- Subscriber location;</li> <li>- Subscriber state;</li> <li>- Current location;</li> <li>- IMEI &amp; Software version;</li> <li>- GPRS MS classmark information.</li> </ul>

## 11.3.6 SGSN to HLR information flows

### 11.3.6.1 Provide Subscriber Info ack

#### 11.3.6.1.1 Description

This IF is used by the SGSN to provide the requested subscriber location and/or subscriber state information to the HLR.

#### 11.3.6.1.2 Information Elements

This IF is defined in 3GPP TS 23.018 [12]. The following differences apply:

Information element name	Status	Description
Subscriber State	-	Not applicable.
PS domain Subscriber State	C	This IE indicates the status of the MS in the PS Domain. It shall be present only if requested by the HLR. The possible values of the IE are: <ul style="list-style-type: none"> <li>- Detached: The SGSN has determined from its internal data that the MS is not attached to the network.</li> <li>- CAMEL attached, MS not reachable for paging: The SGSN has determined from its internal data that the MS is attached to the network, but there is no PDP Context active, and the MS is not reachable for paging.</li> <li>- CAMEL attached, MS may be reachable for paging: The SGSN has determined from its internal data that the MS is attached to the network, but there is no PDP Context active; the SGSN has not determined from its internal data that the MS is not reachable for paging.</li> <li>- CAMEL PDP active, MS not reachable for paging: The SGSN has determined from its internal data that the MS is attached to the network there is at least on PDP context active, and the MS not reachable for paging.</li> <li>- CAMEL PDP active, MS may be reachable for paging: The SGSN has determined from its internal data that the MS is attached to the network and there is at least one PDP context active; the SGSN has not determined from its internal data that the MS is not reachable for paging.</li> </ul>
PDP Context Information List	S	This IE is described in a table below. This IE indicates the PDP context information for each PDP context which is active for the MS. It shall be present if the PS domain Subscriber State has the value "CAMEL PDP active, MS not reachable for paging" or "CAMEL PDP active MS may be reachable for paging"; otherwise it shall be absent.
Location Information For GPRS	C	This IE is described in a table below. It indicates the location of the MS. It shall be present only if requested by the HLR.
IMEI (with software version)	C	This IE contains the IMEI & software version of the ME in use by the served subscriber. It shall be present only if requested by the HLR.
GPRS MS Class	C	This IE contains the MS network and radio access capabilities. It shall be present only if requested by the HLR.

PDP Context Information includes the following information elements:

Information element name	Status	Description
PDP Context Identifier	M	Index of the PDP context.
PDP State	C	Packet data protocol state, INACTIVE or ACTIVE.
PDP Type	C	PDP type, e.g., PPP or IP.
PDP Address	C	PDP address, e.g., an IP address.
APN Subscribed	C	The APN received from the HLR.
APN in Use	C	The APN currently used.
NSAPI	C	Network layer Service Access Point Identifier.
TI	C	Transaction Identifier.
TEID for Gn/Gp	C	Tunnel Endpoint Identifier for the Gn and Gp interfaces.
TEID for Iu	C	Tunnel Endpoint Identifier for the Iu interface.
GGSN Address in Use	C	The IP address of the GGSN currently used.
Subscribed QoS	C	The quality of service profile subscribed.
Requested QoS	C	The quality of service profile requested.
Negotiated QoS	C	The quality of service profile negotiated.
Charging ID	C	Charging identifier, identifies charging records generated by SGSN and GGSN.
PDP Context Charging Characteristics	C	The charging characteristics of this PDP context, e.g., normal, prepaid, flat-rate, and/or hot billing.
RNC Address In Use	C	The IP address of the RNC currently used.

Location Information For GPRS includes the following information elements:

Information element name	Status	Description
Service area ID	C,E	See 3GPP TS 23.018 [12].
Cell ID	C,E	See 3GPP TS 23.018 [12].
Location area ID	C,E	See 3GPP TS 23.018 [12].
Routeing area ID	C	See 3GPP TS 23.003 [7].
Geographical information	C	See 3GPP TS 23.032 [13].
Geodetic information	C	See ITU-T Q.763 [40].
Age of location information	C	See 3GPP TS 23.018 [12].
Current Location Retrieved	C	See 3GPP TS 23.018 [12].
SGSN number	M	Global Title of the SGSN. See 3GPP TS 23.060 [15].
Selected LSA Identity	C	This IE is applicable only if SoLSA is supported by the SGSN. This IE indicates the LSA identity associated with the current position of the MS. It shall be present if the LSA ID in the subscriber data matches the LSA ID of the current cell. In the case of multiple matches the LSA ID with the highest priority it shall be present. See 3GPP TS 23.073 [17].

Location Information is defined in 3GPP TS 23.018 [12]. The following differences apply:

Information element name	Status	Description
Service area ID	C,E	See 3GPP TS 23.018 [12].
Cell ID	C,E	See 3GPP TS 23.018 [12].
Location area ID	C,E	See 3GPP TS 23.003 [7].
Selected LSA Identity	C	This IE indicates the LSA identity associated with the current position of the MS. It shall be present if the LSA ID in the subscriber data matches the LSA ID of the current cell. In the case of multiple matches the LSA Id with the highest priority it shall be present. See 3GPP TS 23.073 [17].
Routeing area ID	C	See 3GPP TS 23.003 [7].
Location number	-	Not applicable.

---

### Input proposal(s) for Release 2000 (N2#12 output)

TDoc #	Title	Editor's comment
N2-000323	Introduction of Alerting DP	4 Note #13

## Changes and reminders by the editor

Note #	Change	Result by N2
Note #1	<ul style="list-style-type: none"> <li>- A blank space inserted before a right parenthes "(" in the description Called Party Number in 4.6.5.2.</li> <li>- "." -&gt; "," for "For the TDP ...".</li> <li>- Bullet symbol change dot -&gt; "-" in GSM Forwarding Pending.</li> </ul>	OK
Note #2	<ul style="list-style-type: none"> <li>- Note at the top left of the procedure Handle_FCI_GPRS, "... to handling ..." -&gt; "... to handle ..."</li> <li>- "?" added in the decision boxes in the procedure Handle_FCI_GPRS.</li> </ul>	OK
Note #3	The note at the top left sanswiched by "/" and "/".	OK
Note #4	<ul style="list-style-type: none"> <li>- Bullet symbol change dot -&gt; "-" in Location area ID.</li> <li>- Description of Geographical information in 11.3.2.1.2 is referred to 23.032 while other clause referres to 23.018. Is it ok?</li> </ul>	OK
Note #5	Deletion of the indicated sheet affects total sheet number. However, other sheets will be updated later unless no technical changes were given during the Helsinki meeting.	OK
Note #6	<ul style="list-style-type: none"> <li>- New procedure CAMEL_GPRS_Routeing_Area_update_PDP_Context would be preferable.</li> <li>- Proposed CAMEL_GPRS_Routeing_Area_update_Context (sheet 1) may need revised. Does not the receiving the signal Int_error result in Abort_session and Detach in Release_session?</li> </ul>	NO Covered by CR-194r3
Note #7	New figure counters inserted in some figure titles. Also reference to bookmark instead of hard coding of the number (the text reference to the figure 8.1).	OK
Note #8	":" inserted after "Figure 6.1" as "Figure 6.1:"	OK
Note #9	Blank space between the figure number and the sheet number (alphabetical) deleted in the clauses 6 and 7. This is the alignment of the style to the clause 4.	OK
Note #10	Full title of this specification. Added.	OK
Note #11	Clause 4.3.6.2 title font change	OK
Note #12	SDL procedure CAMEL_OCH_MSC1, duplicated underscore "_" removed in a procedure call CAMEL_OCH_ETC	OK
Note #13	<p>Contents were revised by the originator as the meeting discussed. Further changes by the editor as follows:</p> <ul style="list-style-type: none"> <li>- Figures in O/T-BCSM modified.</li> <li>- In table 4.1, ":" removed after "that".</li> <li>- Figure titles for SDL changed to all capital letters (Alerting -&gt; ALERTING).</li> <li>- In SDL procedure CAMEL_MT_MSC_ALERTING the note at the top left sanswiched by "/" and "/".</li> </ul> <p>- DP numbers are only used in the tables for the implicit disarmed DPs. Is it still meaningful to use the numbers?</p> <p>- Is the naming "CAMEL_MT_MSC_ALERTING" or the place appropriate to be placed among "xxx_GMSC_xxx"?</p>	OK  Not decided at N2#12 Not decided at N2#12

21 August 2000 as Draft Vx.1.1 (revision of draft Vx.1.0)

## Changes and reminders

Note #	Change	Result by N2
	Error implementing CR 23.078-188r1 corrected. (4.6.1.9.2. rational of "C" conditional)	OK

# 11 September 2000 as Draft Vx.2.0 (after N2#13)

## Input proposal(s) for Release 2000 (N2#13 output)

TDoc #	Title	Editor's comment
N2-000402	CAMEL control of Optimal Routeing	4 Note#9

## Changes and reminders by the editor

Note #	Change	Result by N2
Note #1	Reference number to 3GPP TS 23.060, "[11]" added.	
Note #2	<ul style="list-style-type: none"> <li>- For some test boxes texts had been in comment. Changed to the text extention.</li> <li>- SDL figure CAMEL_SMS_SUBMITTED appears before CAMEL_SMS_FAILURE, as 7.5.2.1 says.</li> </ul>	
Note #3	Bullet symbol changed dot -> "-"	
Note #4	<p>Due to the multiple CRs on clause 6, the following structure changes applied in subclause 6.5.3:</p> <p>6.5.3.1 (new, by CR 23.078-194r3) Process GPRS_SSF          6.5.3.2 (new, by CR 23.078-194r3) Process GPRS_Dialogue_Handler          6.5.3.3 (new, by CR 23.078-194r3) Pcedure Handle_AC_GPRS          6.5.3.4 (new, by CR 23.078-194r3) Pcedure Handle_ACR_GPRS          6.5.3.5 (new, by CR 23.078-194r3) Pcedure Complete_FCI_Record_GPRS          6.5.3.6 (former 6.5.3.1) Procedure Handle_SCI_GPRS          6.5.3.6.1 (new, by CR 23.078-194r3) Handling of SCI_GPRS for the Session          6.5.3.6.2 (new, by CR 23.078-194r3) Handling of SCI_GPRS for a PDP Context          6.5.3.7 (new, by CR 23.078-194r3) Procedure Handle_PDP_Acknowledgement          6.5.3.8 (new, by CR 23.078-200r7/216r1) GPRS duration control, procedures Handle_AC_GPRS and Handle_ACR_GPRS          6.5.3.8.1 (new, by CR 23.078-200r7) Overview          6.5.3.8.2 (new, by CR 23.078-216r1) TC guard timer          6.5.3.8.2.1 (new, by CR 23.078-216r1) General          6.5.3.8.2.2 (new, by CR 23.078-216r1) Check guard timer          6.5.3.8.2.2.1 (new, by CR 23.078-216r1) Apply Charging GPRS          6.5.3.8.2.2.2 (new, by CR 23.078-216r1) Release GPRS          6.5.3.8.2.2.3 (new, by CR 23.078-216r1) PDP Context Disconnect          6.5.3.9 (former 6.5.3.2 title renamed) SDL diagrams for process GPRS_SSF and procedures</p> <p>References to/from these subclause changed accorgingly.</p> <p>SDL figures re-arranged.</p>	Note #2 for Vx.2.2
Note #5	Dialogue Id in the SDL GPRS_Dialogue_handler "i" and "j" changed to "j" and "k", respectively, for better visibility.	
Note #6	<ul style="list-style-type: none"> <li>- As the CR changed the DP names to starting with CAPITAL letters, all the DP names also changed throughout the clause.</li> <li>- Existing table 3 replaced by the new table (deleted and added).</li> <li>- Procedure names to be in line with S2 CR in N2-000429.</li> <li>- SDL: Routeing_Area_Update_Context (sheet 2), the state changed to DP_Change_Of_Position_Context. (error in the CR)</li> <li>- (6.5.3.6) PDP Context is (has been) <u>A</u>cknowledged, -&gt; <u>a</u>cknowledged</li> <li>- "Reset Tssf to <u>v</u>alue ..." after receiving CAP_ResetTimerGPRS during WFI, -&gt; "Reset Tssf to <u>y</u>alue ..." (editorial modification of existing description)</li> <li>- "Abort" signal sent by the gprsSSF to the GPRS_Dialogue_Handler changed to "TC_Abort".</li> <li>- Receiving Int_DP_PDP_Context_Disconnection in Mon and the branch of EDP-R, - "Instruction_counter <u>:=</u>1" (add ":" before "=")</li> <li>- SDL Handle_SCI_GPRS, the top left text "section" to "subclause"</li> </ul>	
Note #7	<ul style="list-style-type: none"> <li>- Original figures modified, e.g. "Tsws" -&gt; "Tsw(Session), size to be fit.</li> <li>- Editorial changes applied, e.g. deletion double spaces, etc.</li> <li>- "Note: There may be Guard timer(s) in gprsSSF to supervise the response from the gsmSCF on the Apply Charging Report GPRS operation" deleted, due to the agreed CR 23.078-216r1.</li> </ul>	Note #1 for Vx.2.2
Note #8	Throughout the document, spaces preceding colone (:), semicolone (;) or fullstop (.) found. Deleted.	
Note#9	Abbreviation for "OR" in subclause 3.2, or the full wording "optimal routeing" for the information element name required?	

## 18 September 2000 as Draft Vx.2.1 (revision of draft Vx.2.0)

### Changes and reminders by the editor

Note #	Change	Result by N2
	Change by CR 23.078-187 removed. It was superseded by CR 23.078-187r1.	
	In clause 4, SDL gsmSSF, following existing errors found and corrected; <ul style="list-style-type: none"> <li>- Sheet 13: "provoques" -&gt; "provokes" (two places),</li> <li>- Sheet 14: "provoques" -&gt; "provokes" (two places),</li> <li>- Sheet 16: Receiving signal "Timer expiry Tssf" and the comment "Internal" connected. (the comment is isolated now),</li> <li>- Sheet 17: Straightly down from Int_DP_T_Answer, task box "Set Outstanding_Requests=1" -&gt; "Outstanding_Requests:=1",</li> <li>- Sheet 18: Straightly down from EDP-R branch, task box "Set Outstanding_Requests=1" -&gt; "Outstanding_Requests:=1",</li> <li>- Sheet 24: The state "Monitor" -&gt; "Mnitoring"</li> </ul>	
	In clause 6, GPRS, following changes and corrections; <ul style="list-style-type: none"> <li>- In all the SDL check boxes ":= " to "= " where applicable,</li> <li>- Packed SDL symbols moved a little for more spacing where applicable,</li> <li>- Receiving signal Int_Continue added in the SDL CAMEL_GPRS_PDP_Context_Establishment sheet 2,</li> <li>- Missing "CAP_" to "CAP_Entity_Released_GPRS" added where applicable in GPRS_SSF,</li> <li>- Add "(Sessein)" to "Int_Continue" to specify the session explicity in GPRS_SSF,</li> <li>- Correction of the notation "j" and "k" in GPRS_Dialogue_Handler.</li> </ul>	
	Abbreviation "OR" added to subclause 3.2 as "Optimal Routeing", which relates to the proposal by N2-000402.	

## 22 September 2000 as Draft Vx.2.2 (Further input after CN#9)

### To be Input Change Requests after CN#9 approval

TDoc #	spec	CR #	Rev	Cat	Title
N2-000280	23.078	181	2	F	Indication of Network requested PDP Context in Initial DPGPRS message
N2-000409	23.078	217		F	PDP establishment
NP-000581	23.078	220		F	Correction to the missing connection in SDL gsmSSF

### Changes and reminders by the editor

Note #	Change	Result by N2
Note #1	"Note" recovered. Further alignment among issues on the guard timer required.	
	In clause 4, SDL gsmSSF, following existing errors found and corrected; <ul style="list-style-type: none"> <li>- Sheet 6: "Set Outstanding_Requests=Outstanding_Requests - 1" -&gt; "Outstanding_Requests:=Outstanding_Requests - 1",</li> <li>- Sheet 6: "Set Outstanding_Requests=0" -&gt; "Outstanding_Requests:=0",</li> <li>- Sheet 11: "Set Outstanding_Requests=Outstanding_Requests + 1" -&gt; "Outstanding_Requests:=Outstanding_Requests + 1",</li> <li>- Sheet 13: "CallActive:=FAKSE" -&gt; "CallActive:=FALSE".</li> </ul>	
Note #2	Subclause 6.5.3.9 title: "SDL diagrems ..." -> "SDL diagrams ..."	
<b>22 September 2000: Accept all the revisions after all input and changes listed above.</b>		

## 07 October 2000 as Draft Vx.2.3 (as an input to CN2#14)

### Changes and reminders by the editor

Note #	Change	Result by N2
30/09	Error implementing CR 23.078-137r4 corrected. (missing SDLs to be updated, gsmSSF sheets 8 and 9, Handle_O_Answer and Handle_T_Answer)	
	<b>07 October 2000: Accept all the revisions after all input and changes listed above.</b>

## Input proposal(s) for Release 2000 (N2#14 output)

TDoc #	Title	Editor's comment
N2-000384	SDL cleanup	4 Note #4
N2-000492	Implicit disarming rules	4
N2-000536	BCSM corrections	4
N2-000539	Introduction of CAMEL control of MT-SMS	2, 3, 7 Note #7
N2-000542	Enhancement to Play Announcement	4
N2-000557	Introduction of Mid Call Event in O-BCSM and T-BCSM	4

## Changes and reminders by the editor

Note #	Change	Result by N2
Note #1	On SDL Process SMS_SSF, "The following timers are defined." -> "The following timer is defined", as there is only one timer Tssf.	
Note#2	Correct style applied to the tables 4.2 and 4.3	
Note#3	All the figure re-drawn by the editor. "PDP-Id" -> "PDP Id"	
Note#4	No revision marks (deletion) for old SDLs.	
Note#5	Changes included in N2-000384 sheet 20 and 31	
Note#6	Changes included in N2-000384 sheet 26.	
Note#7	Clause 3: Rearranged according to alphabetical order Clause 7: <ul style="list-style-type: none"> <li>- Following wording used. <ul style="list-style-type: none"> <li>- "MO SMS" for mobile originating SMS, not "MO-SMS", except MO-SMS-CSI</li> <li>- "MT SMS" for mobile terminating SMS, not "MT-SMS", except MT-SMS-CSI</li> <li>- DP "O_SMS_Submitted", not "O_SMS_Submission"</li> <li>- DP "T_SMS_Delivered", not "T_SMS_Delivery"</li> </ul> </li> <li>- SDL Process SMS_SSF sheet 2, flow modified, no change in the note at the top right.</li> <li>- SDL Process SMS_SSF sheet 8 merged into sheet 7. Accordingly 7.6.5.1 explanations on sheets 7 and 8 merged.</li> <li>- Concerning the location information in MSC/SGSN in Initial DP information flow, in 7.6.1.2, the base document differs from the latest draft. Some information elements were not implemented.</li> <li>- Send Info For MT SMS Ack under subclause 7.6.7.</li> </ul>	
Note#A	"Heading" attribute removed from "Additional Calling Party Number" row in Initial DP information flow in 4.6.1.5.	
Note#B	All the first rows in the tables set "heading" attributes.	

## 06 November 2000 as Draft Vx.3.1 (revision of draft Vx.3.0)

### Changes and reminders by the editor

Note #	Change	Result by N2
	Table 4.3 "DP Terminating_Attempt_Authorised" -> "DP Terminating_Attempt_Authorised" (one of double "_" between "Attempt" and "Authorised" removed)	
	Correction concerning N2-000520: At the last paragraph of "6.5.3.8.2.1 General", a text "There may be additional timer(s) in gprsSSF to supervise the response from the gsmSCF on the Apply Charging Report GPRS operation." was missing. Added.	
	Correction concerning N2-000553: In the figure 6.16d "Note 1" was missing. Added.	
	References (clause 2 and throughout the document) and some spelling updated as modified in R99 document by MCC.	
	Font change in the clause 4 ("VT" columns of the information flows).	
	Table numbers corrected to "[#clause].[#sequence]" in clauses 6 and 7.	

## 24 November 2000 as Draft Vx.4.0 (after CN2#15)

### Input Change Requests (CN2#15 output)

N2-000681	Introduction of the CSID to the P&CUI IF	4 Note#7
N2-000686	Introduction of Call Party Handling Modelling and Information Flows	4 Note#8

## Changes and reminders by the editor

Note #	Change	Result by N2
	<b>20 November 2000: All the revisions for VX.3.1 accepted, blank rows deleted, then input CRs and proposals approved at CN2#15.</b>	
Note#1	Enumeratd list (1,2,...) in subclause 6.2.1 modified to dashed list (“-“)	
Note#2	Reference number to 3GPP TS 23.018 added as “[3]”.	
Note#3	Reference number to 3GPP TS 23.003 and 23.060 added as “[37]” and “[11]” respectively.	
Note#4	Clause 7 Selected LSA Identity: Text added in the description as “This IE is applicable only if SoLSA is supported by the SGSN.” and “1” deleted from “C1”.	
Note#5	SDL CAMEL_MT_MSC_ALERTING and CAMEL_CF_MSC_ALERTING: the top-right texts on the sheet 2 for each SDL was different from the sheet 1. It seems the original SDT file (maybe CAMEL_MT_MSC_ANSWER) had been inconsistent to the doc file. SDT file modified so that the text become the same as the sheet 1, both for the proposal and the existing SDLs.	
Note#6	Proposed SDL gsmSSF sheet 38 split into several sheet, included in the new sheet 3 and 5. Rename the state “Wait_for_Import_ack” -> “Wait_for_Import_Leg_ack”. Underscore “_” added to some signals in the SDLs.	
Note#7	The description of Call Segment ID rewritten as the same as the one in Play Announcement in N2-000680.	
Note#8	NOTE 5 in Table 4.1: “DP” added to “O_Mid_Call” as “DP O_Mid_Call”. NOTE 4 in Table 4.2: “DP” added to “T_Mid_Call” as “DP T_Mid_Call”.	
	Font change in the clause 2 [9] Helvetica -> Times New Roman.	
	Figure 4.xx SDL: Procedure CAMEL_CF_MSC_ANSWER updated (original figure in the document and SDT file had been in mis-alignment. The SDT file corrected. The figuer update was for alignment purpose only)	
	and some minor editorial change	

## 4 December 2000 as Draft Vx.4.1 (revision of Vx.4.0)

### Input Change Requests (approved by email)

TDoc #	spec	CR #	Rev	Cat	Title	Editor's comment
N2-000685	23.078	250	2	F	Additional clarification for ATM	10

## Changes and reminders by the editor

Note #	Change	Result by N2
	4.2.1 “invoked” -> “initiated” as CR 23.-78-223r1	
	6.2.1 “Waiting For Information” -> “Waiting_For_Information” (correction of CR 23.078-232r4)	
	7 Error correction in implementation of N2-000539. Red-shaded parts changed to yellow-shaded (for readability)	
	10.3.1.1.2 description of Subscriber Identity corrected as CR 23.078-228r3 (“either” inserted).	
	11.3.4.1.2 description of “C1” missing, added as CR 23.078-248r2.	
	Reference to 3GPP documents set to “3GPP TS{non-breaking space}nn.nnn{non-breaking space}[nn]”	
	Reference document numbers set bookmarks, and linked to the number. and some small corrections.	

# 11 December 2000 as Draft Vx.4.2 (After CN#10 plenary)

## Input Change Requests (approved by CN#10 plenary)

TDoc #	spec	CR #	Rev	Cat	Title	Editor's comment
N2-000566	23.078	239		F	Check_Gap_Criteria correction	

## Removed Change Requests (rejected by CN#10 plenary)

TDoc #	spec	CR #	Rev	Cat	Title	Editor's comment
N2-000597	23.078	247		F	Request more than one SS data and/or CSI in one ATSI request	10

## Changes and reminders by the editor

Note #	Change	Result by N2
	Correction on N2-000686. Tables 4.4 and 4.5 "other Leg" -> "any other Leg"	
	Correction on N2-000539. Reference 03.047 "TS" -> "TR"	
	"No break across pages" property set to the table of Initial DP IE in 4.6.1.7.2.	
	Underline removed from "Three different type of DPs are identified" in 6.2.1	
	Fonts changed to Times New Roman in "- At least one report is ending" in 6.2.2	
	SDL diagrams resized to 170x220 mm for the following SDLs: CAMEL_MO_Dialled_Services (1), CAMEL_OCH_ETC (1-3), CAMEL_OCH_CTR (1,3), CAMEL_Start_TNRy (1), CAMEL_Stop_TNRy (1), CAMEL_N_CSI_CHECK_MSC (1), CAMEL_RReconnected_Call_VLR (1), CAMEL_Set_ORA_Parameters (1), CAMEL_MT_GMSC_INIT (1,2,5), CAMEL_MT_DISC2 (2), CAMEL_MT_DISC3 (1), CAMEL_MT_DISC4 (2,3), CAMEL_MT_DISC5 (2), CAMEL_MT_CTR (3,4), CAMEL_CSI_Check_HLR (1), CAMEL_SET_SOA (1), CAMEL_O_CSI_Check_VLR (1), CAMEL_CF_Dialled_Services (1), CAMEL_Assisting_MSC (1,2), assisting_gsmSSF (all), CAMEL_Provide_Subscriber_Info (1), CAMEL_Check_CF_Interaction (1).	
	SDL Process SMS_SSF sheet 5 modified ("Append" label moved slightly left).	

## 06 February 2001 as Draft Vx.5.0 (after CN2#16)

### Input Change Requests (approved by CN2#16)

TDoc #	spec	CR #	Rev	Cat	Title	Editor's comment
N2-010009	23.078	257		F	Update of References	2, 4, 9, 10, 11
N2-010079	23.078	261	1	F	Restriction on SS-CSI to VLR - no marking for CCBS	8
N2-010081	23.078	267	1	F	Usage of MSISDN for CAMEL - USSD Information Flows	5
N2-010082	23.078	268	1	F	Correction of error implementing CR 23.078-118r2	4
N2-010084	23.078	258	1	F	Routeing Area Update indication to Detach and Disconnect notifications to SCP	6
N2-010086	23.078	259	1	F	Description of Entity Released GPRS	6
N2-010089	23.078	263	1	F	No Volume charging on GPRS Session (clarifying text)	6
N2-010092	23.078	270	1	F	Clarification of APN change in PDP Context Established	6
N2-010093	23.078	271	1	F	Correction on GPRS related information flows	6
N2-010095	23.078	260	1	F	Correction to usage of the term 'O-BCSM'	4
N2-010114	23.078	264	2	F	Correction of "Call Forwarding Notification" feature in CAMEL Phase 3.	4

### Input proposal(s) for Release 5 (N2#16 output)

TDoc #	Title	Editor's comment
N2-010101	Introduction of flexible tones in ApplyCharing Information Flow	4 Note #1
N2-010106	FTN in forwarding notification to SCP (distributed on 24 <sup>th</sup> January)	4
MCSEO	Alignment of the notation for the presence requirements for les (distributed on 25 <sup>th</sup> January. No objection by 30 <sup>th</sup> January)	4,5,6,7,8,9,10,11 Note #2

## Changes and reminders by the editor

Note #	Change	Result by N2
	<b>17 January 2001: All the revisions for VX.4.2 accepted, blank rows deleted, then input CRs and proposals approved at CN2#16.</b>	
	Release changed on the coversheet (R00 -> R5)	
Note#1	Figure redrawn by the editor.	
Note#2	Following the proposal and a comment given via email, following changes were applied; <ul style="list-style-type: none"> <li>- In Location information IE in SGSN (7.6.1.2.2), the notes for Service area ID, Cell ID and Location area ID were deleted.</li> <li>- Most line breaks removed, or replaced by empty paragraph.</li> <li>- An empty "Normal" style paragraph was inserted after each table, instead of changing paragraph spacing.</li> <li>- Text out of the tables re-formatted as "Normal" style (previously B1)</li> </ul>	Note#3
	And some other editorial corrections.	

## 14 February 2001 as Draft Vx.5.1 (revision of Vx.5.0)

### Removed proposal(s) for Release 5 (N2#16 output)

TDoc #	Title	Editor's comment
N2-010101	Introduction of flexible tones in ApplyCharing Information Flow	4 Note #4

### Input proposal(s) for Release 5 (N2#16 output)

TDoc #	Title	Editor's comment
N2-010115	Introduction of flexible tones in ApplyCharing Information Flow	4 Note #4

## Changes and reminders by the editor

Note #	Change	Result by N2
	Revision history on the top page removed. (to avoid ugly pagination)	
	Procedures of MO-SMS and MT-SMS separated as CN#16 agreed, as below (no contents changed); <ul style="list-style-type: none"> <li>7.5.1 Functional architecture for CAMEL MO SMS services</li> <li>7.5.2 Handling of mobile originating SMS (previously 7.5.3) (with SDLs for MO part)</li> <li>7.5.3 Functional architecture for CAMEL MO SMS services (previously 7.5.2)</li> <li>7.5.4 Handling of mobile terminating SMS (with SDLs for MT parts)</li> </ul>	
Note#3	Additional editorial improvement as follows; <ul style="list-style-type: none"> <li>An empty "Normal" style paragraph was inserted before 4.6.1.6.</li> </ul>	
Note#4	At the CN2#16 meeting, N2-010101 was revised to N2-010115. The figure and the text were updated as stated in N2-010115. <ul style="list-style-type: none"> <li>Play Tone and Play Bustlist set as "E", instead of the proposal "O", according to MCSEO.</li> <li>"Play Bust" changed to "Play Burstlist" in the description of Warning Period.</li> </ul>	
	Style corrected in the several subclauses in the clause 9. Also some editorial correction in the clause	

## 22 February 2001 as Draft Vx.5.2 (revision of Vx.5.1)

### Changes and reminders by the editor

Note #	Change	Result by N2
	<p>Due to a number of errors in the implementation of N2-010115, the editor has overwritten the contents by that of N2-010115. However, following changes were done by the editor;</p> <ul style="list-style-type: none"> <li>- Figure drawn by the editor.</li> <li>- "Audible Indicator IE shall consist of either Play Tone or Play Burstlist as described below" -&gt; "Audible Indicator IE shall contains the following information:" (implementing MCSEO indicate the information elements mutually exclusive)</li> <li>- Play tone and Play Burstlist property changed from "O" to "E".</li> <li>- Description of Warning Period: "Burst" -&gt; "Burstlist".</li> </ul>	

## 09 March 2001 as Draft Vx.6.0 (N2#17 output)

### Input Change Requests (approved by CN2#17)

TDoc #	spec	CR #	Rev	Cat	Title	Editor's comment
N2-010125	23.078	272		F	Corrections to Information Flow Definitions	4, 5, SDL Note #1
N2-010158	23.078	274		F	Correction of Interactions with Call Barring in CAMEL Phase 3.	4, SDL
N2-010163	23.078	279		F	Correction of Triggering after Call Gapping in CAMEL Phase 3.	4, SDL
N2-010205	23.078	269	4	F	Correction of reference	2, 3, 4, 7
N2-010207	23.078	273	1	F	Correction of the Location Information IE	4
N2-010208	23.078	280	1	F	Correction of SDL Set_Notification_Type	9, SDL Note #2
N2-010209	23.078	256	2	F	Clarification on APN usage in the ConnectGPRS operation	6
N2-010215	23.078	283		F	Marking of Location Number in Initial DP SMS as 'Conditional'	7
N2-010219	23.078	285		F	Correction of Output Signals in Process Reconnected_MT_Call_VLR	4, SDL
N2-010220	23.078	282	1	F	Correction to vendor/operator specific GPRS charging-response timer handling	6
N2-010221	23.078	284	1	F	Correction on checking DP criteria and sending VT/T-CSI	4

## Input proposal(s) for Release 5 (N2#17 output)

TDoc #	Title	Editor's comment
N2-010121	Change of name: Process gsmSSF to Process CS_gsmSSF	4, Note#3
N2-010135	Correction of reference	All, Note#4
N2-010165	Correction of O-BCSM in CAMEL Phase 4	4,
N2-010191	Trigger criteria for mid-call event	4, Note#5
N2-010193	Mobile Terminated SMS	7, Note#6
N2-010222	Introduction of CPH operations	4, Note#7
N2-010223	Interfaces and modelling for gsmSCF initiated new calls and parties	4
N2-010224	Triggering criteria for MT-SMS	7
N2-010227	Provide Location information in case a terminating call is alerted.	4
N2-010229	Correction of CAMEL Alerting procedures	4, Note#8

## Changes and reminders by the editor

Note #	Change	Result by N2
	<b>1 March 2001: All the revisions for Vx.5.1 accepted except the change in CR 23.078-270, blank rows deleted, then input CRs and proposals approved at CN2#17.</b>	
Note #1	Applicable to Release 99 only.	
Note #2	Wording change (necessary -> be necessary).	
Note#3	<p>On the sheet 1 of the process CS_gsmSSF, the explanation of the decision box (2), the wording changed for 'gsmSSF' invoked? 'Is the CS_gsmSSF process in any state other than Idle?' Whether the check boxes in the procedures 'gsmSSF invoked?' should be changed remains for further study.</p> <p>On the sheet 1 of the process gsm_SSME_SSF, the first check box changed to 'gsmSCF and MSC belong to the same PLMN?' (previously, 'gsmSSF' instead of 'MSC')</p>	
Note#4	Sorting by the document numbers was not applied. It was because the book marks can not be moved with revision marks. It will be done for Vx.7.0.	
Note#5	Properties of DTMF Digits Completed and DTMF Digits Timeout set to 'S,E'. Wording change 'define' to 'indicate' and 'if defined' to 'if present'.	
Note#6	Notes below figures style changes to 'NW'.	
Note#7	Wording change 'CSE initiated call" to 'gsmSCF initiated call' CAMEL_OCH_MSC_DISC2 was superseded by CR 23.078-274 (N2-010158). CAMEL_ICA_HLR rearranged to four sheets. Connector numbers changed. Proposed gsmSSF sheet 39: Upper part included in sheet 28 and lower part in sheet 5. Note was added in the subclause 4.6 to summarise the meaning of '*' instead of describing 'FFS' at each table.	Note #9
Note#8	Input signals almost evenly distributed among the sheets within a procedure. Correction for the sheet 2 of CAMEL_CF_MSC_ALERTING was done by the editor.	

# 19 March 2001 as Draft Vx.6.1 (revision of Vx.6.0)

## Error corrections by the editor

Note #	Change	Result by N2
N2-010		
121	Figure 4.87* Process gsmSSF title changed to "Process CS_gsmSSF".	
135	Clause 2 References: [20] ETSI EN 300 356-1 (V3.2.2): Delete the "ok" at the end of the reference description.	
Note 9 222	Procedure CAMEL_OCH_MSC_DISC2 (sheet 1) corrected.	
222	In Procedure CAMEL_OCH_LEG1_MSC, the procedure calls "Process_Hold_Request" and "Process_Retrieve_Request" should reference 3GPP TS 23.083, not 23.018 'Subs_FSM'.	
222	In Section 4.5.6.1, the listed process corrected to CAMEL_ICA_HLR.	
222	In Section 4.5.1, Figure 4.9a for the gsmSCF initiated call case: the wrong figure has been pasted. Corrected.	
222	In Process CS_gsmSSF, sheet 8: "Int_Call Status" should be changed to "Int_Leg Status" (twice) to align with the changes in N2-010122. (Note: this wasn't included in N2-010122 as this sheet of SDL didn't exist then!)	
222	In Process CS_gsmSSF, sheet 28: "Int_Abort" corrected to "Int_Release Call Segment".	
222	In Process CSA_gsmSSF sheets 4 and 5: the "Relay the operation to the Process gsmSSF for the indicated CS ID" needs to be changed to include the new process name.	
222	4.6.2.9 Continue With Argument: Second "Forward Service Interaction Indicator contains the following information:" changed to "Backward Service Interaction Indicator contains the following information:"	
222	In Section 4.6.13.1.1 SRI for ICA, the text changed to "gsmSCF initiated call" from "CSE initiated call" for alignment.	
222	"4.6.13 gsmSCF to HLR information flows" and subclauses renumbered to 4.6.14 "4.6.14 HLR to gsmSCF information flows" and subclauses renumbered to 4.6.15	
	Clause 4.5.6 title changed to "Handling of gsmSCF initiated calls" ('in the gsmSSF' deleted).	
	In chapter 6.6.1.2: Leading tab before Apply Charging Report GPRS deleted (invisible).	
	Implementation of CR 23.078-137r4,(N2-000418 Seattle September 2000) was partially missing. All the changes in section 4.5.7.3 (Procedure Handle_SCI) were about this correction.	

# 11 April 2001 as Draft V5D.7.0 (CN2 CPH adhoc output)

## Input proposal(s) for Release 5 (CN2 CPH adhoc output)

<b>TDoc #</b>	<b>Title</b>	<b>Editor's comment</b>
N2-010235	Correction of CAMEL_ICA_MSC_ALERTING	
N2-010238	Alignment of CPH procedures with changes to 23.018	
N2-010249	Long FtN Supported in SRI for ICA	
N2-010250	Correction of gsmSCF-gsmSFR IFs	
N2-010267	Contents of Continue With Argument operation	
N2-010269	Contents of Initiate Call Attempt operation	
N2-010271	Correction of Specialized Resource Report IF	
N2-010272	Correction of gsmSCF-assisting SSF IFs	
N2-010274	Call Gap operation for the multiple CS state of Process CSA_gsmSSF	
N2-010275	Enhancement of Send Routeing Info information flow for the GMSC - HLR interface and further clarifications	
N2-010277	Connect operation for the multiple CS state of Process CSA_gsmSSF	

## Changes and reminders by the editor

Note #	Change	Result by N2
	<b>04 April 2001:</b> <ul style="list-style-type: none"> <li>• All the revisions for Vx.6.1 accepted.</li> <li>• Modification applied to align with the changes previously applied to CAMEL phase 3 (official release) by MCC.</li> </ul>	
235		
238	CAMEL_ ICH_LEG!_MSC divided into four sheets (due to inconsistency with the SDT file)	
249	All capital letters (FtN -> FTN)	
250		
267	"Note" deleted.	
269		
271		
272	more precise reference + bookmark and ref fields style changed	
274		
275	"IF" added for alignment with other description.	
277	All the signal symbols merged.	
	Following changes with revision marks; <ul style="list-style-type: none"> <li>• Version numbering scheme changed as "5D.x.y", as agreed at the meeting.</li> <li>• Abbreviation "ICA" added in 3.2.</li> <li>• Overall SDL architecture in 4.5.1 redrawn and gsmSSF indicated as a dashed box.</li> <li>• Procedure CAMEL_ ICH_VLR: Top left corner, "GSM 23.018" to "3GPP TS 23.018".</li> <li>• Information elements "required" -&gt; "status", as aligned with MCSEO.</li> <li>• All the notes for further study on CPH deleted. They are covered in the other document (N2-010262)</li> </ul>	
	Following changes without revision marks; <ul style="list-style-type: none"> <li>• Re-ordering the reference documents in 2 as mentioned at the last version (impact on the other clauses can be seen with revision marks).</li> <li>• Procedure CAMEL_OCH_VLR: description in the decision box to text extention.</li> <li>• Process CAMEL_ ICH_LEG1_MSC copied from SDT again.</li> <li>• Procedure CAMEL_MT_CF_LEG1_MSC copied from SDT again.</li> <li>• Process CAMEL_MT_CF_LEG2_MSC copied from SDT again.</li> <li>• Top-Left corner of Process CS_gsmSSF: renaming gsmSSF to CS_gsmSSF, deleting all the call cases.</li> <li>• Process CS_gsmSSF: Total number of sheets changed (40-&gt;39).</li> <li>• Process CSA_gsmSSF state names "One_CS, Multiple_CS" or "multiple_CS" included in the symboles; previously in the text extentions (sheets 3, 5, 7, 9, 11 and 12).</li> <li>• Procedure CAMEL_Check_CF_Interaction: Text "Yes" slightly moved upward.</li> </ul>	
Error	Event Report BCSM (4.6.1.6) for DP O/T_Mid_Call; two descriptions exist. N2-010191 did not delete the previous description.	

## 01 June 2001 as Draft V5D.8.0 (N2#18 output)

### Input Change Requests (approved by CN2#18)

<b>TDoc #</b>	<b>spec</b>	<b>CR #</b>	<b>Rev</b>	<b>Cat</b>	<b>Title</b>	<b>Editor's comment</b>
N2-010282	23.078	286		F	GGSN address in SGSN to SCP interface	6
N2-010381	23.078	288	1	F	Mapping of Call Forwarding parameters from CAP-Connect to ISUP-IAM and CAP-InitialDP	4
N2-010290	23.078	290		F	Correction of error implementing CR 23.078-181r2	6
N2-010404	23.078	292	1	F	Handling of second SIFOC	4, SDL
N2-010389	23.078	294	1	F	Correction to GPRS SDL: no state transition for QoS-induced ACR-GPRS	6, SDL
N2-010412	23.078	295	1	F	Correction on the call-Diversion-Treatment-Indicator at the GMSC	4, SDL
N2-010449	23.078	301		F	CAMEL Capability Handling in GPRS-CSI	6

### Input proposal(s) for Release 5 (N2#18 output)

<b>TDoc #</b>	<b>Title</b>	<b>Editor's comment</b>
N2-010420	Handling of reconnect after leg 2 disconnects	4, SDL
N2-010421	Correction of Call Release	4, SDL
N2-010424	Addition of NC & NP columns to IF tables	4
N2-010431	Corrections to procedure CAMEL_EXPORT_LEG_MSC	4, SDL
N2-010432	Correction of gsmSCF initiated new calls: CAMEL_ICA_MSC process	4, SDL
N2-010435	Correction to MT-SMS Trigger Criteria	7, SDL
N2-010439	Corrections for CAMEL support of OR	4
N2-010470	Handling of RNC & ENC operations in gsmSSF	4, SDL

## Changes and reminders by the editor

Note #	Change	Result by N2
	<b>18 April 2001: All the revisions for V5D.7.0 accepted, then following changes done by the editor.</b>	
	Clause 4.5.7 (Assisting case) and hereafter renumbered due to numbering inconsistency (4.5.7 -> 4.5.8)	
	Clause 7.5.3 (Handling of mobile originating and mobile terminating SMS in the gsmSSF/gprsSSF) and hereafter renumbered due to numbering inconsistency (7.5.3 -> 7.5.5, 7.5.6.1 -> 7.5.5.1)	
	Figures CAMEL_OCH_MSC_DISC3 and CAMEL_O_CSI_CHECK_HLR style corrected to TH	
	Clause 4.6.12.2.2, IEs in Send Info for incoming call changed to "S" (missing modification after MCSEO after Beijing meeting)	
	<b>18 May 2001: CRs and proposals approved at CN2#18 input.</b>	
	Note in 4.5.6.2 "The use of the process and the associated procedures is for further study" recovered as agreed at the meeting.	
N2-010404	SDL: CAMEL_MO_Dialled_Services split into two sheets.	
N2-010420		
N2-010421	New sheet in the proposal included in sheet 6 (sheet number not increased)	
N2-010431	CS_gsmSSF sheet 28: State "Wait_For_Response" split into "Wait_For_Export_ack" and "Wait_For_Import_ack" See also N2-010432.	
N2-010432	CAMEL_ICA_MSC: connector numbers changed (due to the interaction with N2-010432)	
N2-010470	A lot of editorial modification. Newly proposed procedure in the process CS_gsmSSF sheets 41, 42, 43 included in sheets 14, 22, 28 respectively. Sheet 15 affected. Newly proposed procedure in the process CSA_gsmSSF sheet 13 included in sheet 3. Information elements: IEs for "S": the description for the specific condition missing.	

## 12 June 2001 as Draft V5D.8.1 (Revision of V5D.8.0)

### Changes and reminders by the editor

Note #	Change	Result by N2
N2-010420	Correction of CAMEL_MO_Dialled_Services; Sheet 1; After the procedure call CAMEL_OCH_MSC1, if the result is not reconnect, the task box changed to "Result=Fail".	
N2-010424	Correction of information element; 4.6.2.18.2 (Request Report BCSM Event) Leg ID changed to "M" in the case of NP call.  Add note to Initial DP added as "Note:IEs in the NC and NP columns in this IF may need further study."	
N2-010431	Correction of CS_gsmSSF; Sheet 5; State name changed to "Wait_For_Import_Leg_ack" after sending Import_Leg. For the alignment, in sheet 28, state name "Wait_For_Import_ack" and "Wait_For_Export_ack" changed to "Wait_For_Import_Leg_ack" and "Wait_For_Export_Leg_ack", respectively. Also state name "Wait_For_Disconnect_ack" changed for "Wait_For_Disconnect_Leg_ack".  Correction of CSA_gsmSSF; Sheet 8, Int_Abort signal to the left changed to Int_Release_Call_Segment.	
N2-010432	Figure 4.80: Process CAMEL_ICA_MSC; all 6 sheets; update the top left corner "/* A process in the MSC to handle a gsmSCF initiated new call or new party set-up. */"  Figure 4.81a: Process CAMEL_ICA_MSC_ALERTING (sheet 1) Connect Procedure Call "CAMEL_ICA_MSC2" with the decision box "Result".  Figure 4.82a: Process CAMEL_ICA_MSC_ANSWER (sheet 1) Delete taskbox "Answer_Received := True"	
N2-010435	Subclause 7.2.1 Criteria at DP SMS Delivery Request First paragraph: delete "under". Second paragraph: delete "criteria" and "are"	
N2-010470	Figure 4.89v: Process CS_gsmSSF (sheet 22) Delete taskbox "Set Tssf...".  Following two information flows were alphabetically reordered. 4.6.2.18: Request Report BCSM Event -> 4.6.2.19 4.6.2.19: Request Notification Charging -> 4.6.2.18	
	Note in 4.5.6.2 "The use of the process and the associated procedures is for further study" recovered as agreed at the meeting. DELETED.	NOT DELETED! See the note#1 in V5D.8.2
<b>Most CRs for CAMEL Phase 4 have not been incorporated in the last version. Done.</b>		

## 18 June 2001 as Draft V5D.8.2 (Revision of V5D.8.1)

### Input Change Requests (after CN#12 Plenary)

TDoc #	spec	CR #	Rev	Cat	Title	Editor's comment
NP-010354	23.078	306	1	F	Correction for the CAMEL3 ACR-GPRS parameter range problem (roll-over)	6
NP-010246	23.078	308		F	Correction to PDP Context DP description table (table 6.2)	6

## Changes and reminders by the editor

Note #	Change	Result by N2
	According to the decision by the CN#12 Plenary, the following CRs and proposal were NOT implemented in this version: N2-010444 (23.078-296r3): Introduction of Reference Number for MO-SMS N2-010459 (23.078-298r1): Inclusion of warning note for the reporting of total duration or volume for GPRS N2-010472 (23.078-304r1): Indication of gsmSCF Address in Continue GPRS and Connect GPRS IFs N2-010433 (Rel-5 proposal): Introduction of Reference Number for MT-SMS	
NP-010354	The note proposed in this CR "It is possible that early implementations of the gprsSSF do not support this information element." was NOT implemented. It was because the note was addressed to the early implementation of CAMEL Phase 3.	
Note#1	Although indicated in the previous version that "Note in 4.5.6.2 "The use of the process and the associated procedures is for further study" recovered as agreed at the meeting. DELETED." It was not deleted. This note deleted in this version.	
	Process CAMEL_ICA_MSC (sheet 4), outputs from two test boxes slightly moved.	

25 July 2001 as Draft V5D.9.0 (N2#19 output)

### Input Change Requests (approved by CN2#19)

TDoc #	spec	CR #	Rev	Cat	Title	Editor's comment
N2-010525	23.078	310	1	F	Correction of error implementing CR 23.078-194r3	6, SDL

## Changes and reminders by the editor

<b>Note #</b>	<b>Change</b>	<b>Result by N2</b>
---------------	---------------	---------------------

	<b>19 June 2001: All the revisions for V5D.8.2 accepted, then following changes done by the editor.</b>	
19 June	Figure 6.3 "GPRS Attach/Detach State Model": a duplicated figure deleted. Improved figure remains.	
19 June	Most tables for IEs and DPs adjusted in size to the width 17cm. (no revision marks)	
20 June	All SDL sheet numbers updated.	
	<b>After 13 July 2001: CRs and proposals approved at CN2#19 input.</b>	
N2-010493		
N2-010496		
N2-010511		
N2-010536		
N2-010579		
N2-010598		
N2-010599	The similar notation was adopted for the DP_List on the (new) sheet 12. To distinguish these lists, the following "argument" for the list was taken; DP_List (Connect in WFI) on sheet 11 and DP_List (Continue in WFI) on sheet 12.	
N2-010603		
N2-010605		
N2-010618		
N2-010624		
N2-010625		
	Process CS_gsmSSF: Interworking between N2-010599 and N2-010618 should be treated with care. Some sheets proposed in N2-010618 were further splitted into several sheets. All the existing sheets replaced by the new sheets, due to the sheet number increased (technical changes appear on the (new) sheets 1, 8, 9, 10, 11, 12, 14, 16, 18, 19, 20, 21, 24, 25, 26, 27, 30, 31, 34, 35, 36,)	
	Process CSA_gsmSSF: All the contents over the sheets re-arranged by the editor for the readability reason. Connector #1 and #3 exchanged. All the relay-CAP operations were merged into one input symbol on the sheet 5 upper half part, where each signal had been in each input signal symbol. New flow proposed in N2-010624 came to the sheet 6 (CAP_CallGap merged into this flow) Some SDL figure titles found incorrect ("Process" <-> "Procedure"). Corrected.	
	Process or procedure name preceded by "Process" or "Procedure" completed at each subclause (for introduction).	

## 06 August 2001 as Draft V5D.9.1 (Revision of V5D.9.0)

### Changes and reminders by the editor

Note #	Change	Result by
		N2

	Editorial corrections: Figure number corrected for CAMEL_OCH_MSC_ALERTING (sheet 2) and CAMEL_MT_MSC_ALERTING (sheet 2). CSA_gsmSSF sheet 2, CAP_Connect deleted as it is now included on the new sheet 7. CSA_gsmSSF old sheet 2 deleted.	
	CSA_gsmSSF signal naming tried to be consistent. Blank spaces between words replaced by underscores “_”. Underscores “_” added at the end of line if signal names were written in several lines, and inconsistency found was solved. This change was done on sheets 4, 5, 10, 11, 12, 13, 14 and 15.  This manner shall be done consistently throughout the document. However, due to limited time, this has been done for CSA_gsmSSF only. For the future release, this will be extended to CS_gsmSSF, but strictly limited to the naming which appear only CSA_gsmSSF and CS_gsmSSF. Other notation change would affect various procedures and other specifications.	
N2-010496	CAMEL_MT_MSC_ALERTING sheet 1 and sheet 2, result after receiving Int_Release corrected to “release”. CAMEL_MT_GMSC_ANSWER sheet 2, result after receiving Int_Release corrected to “release”.	
N2-010536	10.3.2.2 ATM ack, one of MO_SMS_CSI corrected to MT-SMS-CSI. 10.3.2.3 NSCD, one of MO_SMS_CSI corrected to MT-SMS-CSI.	
N2-010579	3.2 Abbreviations MG-CSI and MF swapped (alphabetical order)	
N2-010605	4.6.1.8.2, Subscriber State IE, NP column corrected from “C” to “-”.	
N2-010624	4.6.2.2.2, Release If Duration Exceeded IE, description “leg” was missing. Added.	

## 24 September 2001 as Draft V5D.10.0 (N2 CAMEL4 ad hoc output)

### Input proposal(s) for Release 5 (N2 CAMEL4 ad hoc output)

TDoc #	Title	Editor's comment
N2-010641	Change of state name in CAMEL_EXPORT_LEG_MSC	4, SDL
N2-010643	Handling of SRI from gsmSCF to HLR	4, SDL
N2-010648	Inclusion of D-CSI in arming/disarming mechanism	4
N2-010679	Paging in MT-SMS Null & Start & Authentication state	7
N2-010681	Overall changes in 23.078 for CAMEL Phase 4 (Rel-5)	1, 10, 11
N2-010688	Ability to arm MidCall DP for the duration of a call	4
N2-010689	Specific references to non-specific references	2, 10
N2-010690	Inclusion of charging indicator in Event Report BCSM (Answer)	4
N2-010691	Providing the location information during ongoing call	4, SDL
N2-010694	Phased introduction of SMS Reference Number	7, SDL
N2-010696	Correction and improvement Mobility Management for GPRS subscriber	9, SDL

## Changes and reminders by the editor

Note #	Change	Result by N2
	<b>7 August 2001: All the revisions for V5D.9.1 accepted, then following changes done by the editor.</b>	
	10.3.1.1 and ATSI req and 10.3.2.1 ATSI ack exchanged with 10.3.1.2 ATM req and 10.3.2.2 ATM ack, respectively. (alphabetical order)	
	Implementation errors found as follows: N2-010579 subclause 9.4.2.1.1: "/" inserted in "VLRSGSN" as "VLR/SGSN".	
	4.6.1.7 RRB Location information IE was not referred to updated subclause number. Corrected to set the reference to Initial DP (4.6.1.8).	
	4.6.2.9 CWA a blank row found in SII2 table. Deleted (no revision mark).	
	Some IF tables size adjusted.	
	Duplicated periods "." found in 4.6.5.6.1 and 10.3.2.1. One deleted.	
	4.5.4.1 list of each procedure followed by semicolon ";".	
	10.3.1.12.2 SMS-CSI changed to MO-SMS-CSI/MT-SMS-CSI	technical change
	10.3.2.3.2 One of the MO_SMS-CSI (second one) in CSI changed to MT-SMS-CSI.	technical change
N2-010643	After deleting the section 4.5.6.1, the following section numbers adjusted.	
N2-010691	SDL CS_gsmSSF substantial changed sheets are only (new) 15, 16, 23, 24, 32 and 33. Total sheets increased to 46. Other sheets replaced without revision marks.	

## 01 October 2001 as Draft V5D.10.1 (revision of v5D.10.0)

### Changes and reminders by the editor

Note #	Change	Result by N2
	CS_gsmSSF sheet 15 (figure 4.92o) and sheet 24 (figure 4.92x), signal name corrected to O/T_Change_Of_Position_MSC (previously, "..._Chane...").	
	4.6.2.19 Request Report BCSM Event, "-" inserted where Automatic Rearm IE is not applicable.	
	7.5.2.1.5, 7.5.4.1.4 Correction "SCPgsmSCF" to "gsmSCF".	
	Figure 7.5a and 7.5c: If the name of a input signal does not fit into the input signal symbol, they name should be placed in a text extension symbol but not in a comment symbol.	Also CAMEL3

### Input proposal(s) for Release 5 (N2#20 output)

TDoc #	Title	Editor's comment
N2-010706	Handling of Reconnect on Leg2 Disconnect	4, SDL
N2-010710	Use of start digit string as only criteria in Mid Call DP	4
N2-010838	Enhancement of 'Procedure Handle_SCI' for Call Party Handling	4, SDL
N2-010841	CWA considering multiple legs.	4, SDL
N2-010856	Parameters in SRI from gsmSCF	4
N2-010858	ATI/PSI Enhancement for PS Domain	4, 11, SDL

### Changes and reminders by the editor

Note #	Change	Result by N2
--------	--------	--------------

	<b>02 October 2001: All the revisions for V5D.10.1 accepted, then following changes done by the editor.</b>	
	Due to error implementation concerning N2-010689, specific part in the referenced document [3] deleted.	
	<b>After 19 October 2001: CRs and proposals approved at CN2#20 input.</b>	
N2-010810	O-CSI and D-CSI set to "S" in Send Info For MT Reconnected Call ack	
N2-010804	SMS-CSI changed to MO-SMS-CSI, MT-SMS-CSI with TDP criteria for MT-SMS-CSI and MG-CSI added to Specific CSI Deleted List. Is the order of the CSI all right, in terms of the data type?	
N2-010824		
N2-010827		
N2-010811		
N2-010773	Already implemented in Rel-5	
N2-010808	Document numbers in the reference added. 23.082 [xx], 23.088 [yy]. (also in R99)	
N2-010805		
N2-010775		
N2-010845	Already implemented in Rel-5	
N2-010706		
N2-010710		
N2-010838	All the "CSE" was replaced by "gsmSCF" (CSE control -> gsmSCF control)	
N2-010841		
N2-010856		
N2-010858	Quite a lot of changes done by the editor. SDL CAMEL_Provide_Subscriber_Info: re-arranged the figures. SDL (proposed) PSI_SGSN renamed to CAMEL_Provide_Subscriber_Info_SGSN SDL (proposed) Retrieve_Location renamed to CAMEL_Retrieve_Location_SGSN, procedure Retrieve_Current_Location included in this process. Reference documents 23.071 and 23.171 are tentatively kept in the clause 2 for the place holder. Rel-5 specification status should be clarified.	
	For the process CS_gsmSSF, due to the change by N2-010838 and N2-010841, total number of sheets increased to 47. This change is not indicated in this document with the revision marks. Other technical and editorial changes were on the (new) sheets, 1, 12, 13, 24, 27, 32, 33, 34, 37 and 40.	

## 04 November 2001 as Draft V5D.11.1 (revision of V5D.11.0)

### Changes and reminders by the editor

Note #	Change	Result by N2
--------	--------	--------------

N2-010804	Error implementation corrected: Specific CSI Deleted List in 10.3.2.3.2 is an "S" IE, which needs the specific condition to be sent in the description column. "This IE shall be present if CSI is/are deleted" added.	
N2-010808	Error implementation corrected: Word "data" deleted in ATM_Modify_Data.	
N2-010710	Error implementation corrected: Changes to Collected Info and Information To Send in 4.6.3.2.4 moved to Minimum Number Of Digits and Maximum Number Of Digits.	
N2-010838	Error implementation corrected: The second "4.5.7.2.1 Procedure Handle_SCI" replaced by the correct title and text underneath added.  Reminder: "CSE control ..." was replaced by "gsmSCF control ...". One further changed within the proposed clauses.	
N2-010841	Error implementation corrected: Process CS_gsmSSF sheet 13, "(legID)" added as the parameter to the input signal CAP_Continue_WithArgument.	
N2-010858	Error implementation corrected: New subclauses for HLR-SGSN, SGSN-HLR information flows renumbered. Missing information elements Location Information in (new) 11.3.6.1 added.	
N2-010856	Error implementation corrected: Suppress T-CSI corrected to a mandatory IE (M) in 4.6.14.1.2.	

## 11 December 2001 as Draft V5D.12.0 (N2#21 output)

### Input Change Requests (R99: approved by CN2#21)

TDoc #	spec	CR #	Rev	Cat	Title	Editor's comment
N2-010871	23.078	345			Correction to Procedure "Handle_AC" (missing check box exit)	4, SDL

N2-011044		

## 19 December 2001 as Draft V5D.12.1 (revision of V5D.12.0)

### Input proposal(s) for Release 5 (N2#21 output)

TDoc #	Title	Editor's comment
N2-011033	Introduction of Initiate Call Attempt ack	4, SDL

### Changes and reminders by the editor

Note #	Change	Result by N2
N2-011033	This tdoc was missing from the last version. Additional SDL CSA_gsmSSF sheet 2 in this tdoc is on sheet 11. Total sheets increased to 17. Initiate Call Attempt ack IF included as 4.6.1.9 (before Initial DP).	
N2-010895	Note "/* The ICA Default Call Handling ... */" missing. Added as proposed.	
N2-010972	In Process CAMEL_ICA_MSC sheet 6, the Int_Disconnect_Leg signal was removed as this is now handled on sheet 7.	
N2-011043	SDL UpdateSignalling moved after Procedure Handle_T_Answer, as this is a part of process CS_gsmSSF.	

## 06 February 2002 as Draft V5D.13.0 (N2#22 output)

### Input Change Requests (R99: approved by CN2#22)

TDoc #	spec	CR #	Rev	Cat	Title	Editor's comment
N2-020031	23.078	374		F	Correction to GPRS Dialogue Handler	6, SDL

N2-020178	23.078	372	1	F	Clarification on NP check at DP2	4
N2-020182	23.078	376	1	F	Correction to Advice of Charge for MT calls	4, SDL
N2-020192	23.078	384	1	F	Handling Disconnect From IP Forbidden IE in Prompt And Collect User Information IFs	4
N2-020194	23.078	382	1	F	The waiting for new AC timers	4, SDL
N2-020206	23.078	390	1	F	MSISDN to be made available to MSC	4
N2-020216	23.078	373	2	F	Clarification on national values of the Called Party Number's Nature of Address field	4

## Input proposal(s) for Release 5 (N2#22 output)

TDoc #	Title	Editor's comment
N2-020058	Remodelling of CAMEL_ICH_LEG2_MSC	4, SDL
N2-020152	Location information during an ongoing call	4, SDL
N2-020172	Continue without leg 2 at DP2 (for MO)	4, SDL
N2-020174	Continue without leg 2 at DP2 (for CF)	4, SDL
N2-020176	Continue without leg 2 at DP12 (for MT)	4, SDL
N2-020199	Inclusion of ODB data in ATM	2, 10, SDL
N2-020201	Enhancements to subscriber information reporting in the PS domain	7, 9, 11, SDL
N2-020221	Correction on MT SMS SDL	7, SDL

## Changes and reminders by the editor

Note #	Change	Result by N2
	<b>02 February 2002 CRs and proposals approved at CN2#22 input.</b>	
N2-020031		
N2-020077		
N2-020107		
N2-020131		
N2-020178		
N2-020182	This CR is not implemented in Rel-5 spec, due to the great difference of the base document.	
N2-020192		
N2-020194	The content of CR is already realised in Rel-5 spec	
N2-020206		
N2-020216		
N2-020058		
N2-020152		
N2-020172	Procedure CAMEL_OCH_MSC_INIT (3): "Int_Continue_Without Leg2" " _" inserted between "Without" and "Leg2".	
N2-020174	Proposed title and text for "4.5.5.x Action of the MSC on receipt of Int_Continue_Without_Leg2" slightly modified to align with other subclauses.	
N2-020176	Procedure CAMEL_GMSC_INIT (2): (Int_)DP_Termination_attempt_Authorized changed to (Int_)DP_Termination_Attempt_Authorized changed	
N2-020199		
N2-020201	Internal reference (to a subclause) set to level 4 heading only. (other references may need editorial cleanup)	
N2-020221	Proposed text in "7.5.4.2 Handling of mobile terminating SMS in the VLR" slightly modified.	
	Process CAMEL_ICA_MSC (6) has already removed Int_Disconnect_Leg in the previous meeting (CN2#21) and it was done for the SDT file, however the document was left unchanged. Corrected.	
	CS_gsmSSF (1): All the tab codes were replaced by white spaces in the text note.	
	Due to the sheet number increased in CS_gsmSSF and CSA_gsmSSF, the sheets without substantial change replaced by the new numbered sheet without revision marks.	
	Some fonts with underlines found. Those underlines removed.	
	And some editorial modifications.	

# 13 February 2002 as Draft V5D.13.1 (revision of V5D.13.0)

## Changes and reminders by the editor

Note #	Change	Result by N2
N2-020031	Figure 6.18b: Process GPRS_Dialogue_Handler (sheet 2). The left TC_BEGIN (Dialogue ID = j). Input signal corrected to TC_ABORT (DialogueID = j). The output just send afterwards corrected to TC_Abort (Note: lowercase letters to the gsmSSF, upercase letters to the gsmSCF).	
N2-020172	Section 4.5.2.1.6 on handling of Int_Continue Without Leg2 included. Process CS_gsmSSF sheet 8: On receipt of Int_Continue_Without_Leg2, the message is forwarded on to the MSC, and then the process moves to the "Monitoring" state (currently blank).	
N2-020201	Section 9.2.2.1 The Editor's note referring to the stage 1 removed. Section 11.2.3 The first sentence ".... following process" added "and procedures:" to the end. Section 11.3.4.1.2 in ATI ack, the last IE was blank, corrected as "PDP context information list". Section 11.3.5.1.2 in PSI ack, Location Information for GPRS, the IE "SGSN number" corrected to be mandatory.	

## Inclusion subject to SA1#15 result (and date), not included in V5D.13.1

TDoc #	Title	Editor's comment
N2-020139	Removing the feature: Charging Notification	
N2-020205	Transferring the MS classmark & IMEI to the gsmSCF	
N2-020223	Handling of RNC and ENC operations in a CPH configuration	

# 14 February 2002 as Draft V5D.13.2 (input to CN2 editorial clean-up meeting)

## Changes and reminders by the editor

Clauses	Change	Result by N2
	<b>13 February 2002 All the revisions for V5D.13.1 accepted, blank rows in tables deleted: Following changes done by the editor.</b>	
All	Reference to 3GPP specification: 3GPP TS(non-breaking spaces)xx.xxx(non-breaking spaces)[nn]. Some need alignment if two or more references are listed in one line.	
All	Reference to internal (sub)clause: (sub)clause(non-breaking spaces)[(sub)clause number]. Depth to the reference needs alignment.	
All	Reference to internal figure: figure(non-breaking spaces)[figure number].	
All	All which may be wrapped unexpectedly: "white space" replaced by "non-breakable space". Further checking needed.	
4.1.1	Reference field to 3.1 inserted.	
4.2.1	Reference fields to 4.4.2 (O_BCSM) and 4.4.3 (T_BCSM) inserted.	
4.4.3.1	Below the table 4.3 Editor's note style changed to "normal" style.	
	Reference field to inserted.	
4.5.10	Reference fields to 9.2.1 (M-CSI) inserted.	
4.6.1.7	Bookmark on Initial DP corrected.	
4.6.1.9	Bookmark at 4.6.1.9 (IDP) corrected. This affected to 4.6.1.7.	
4.6.1.9.2	IDP.CalledPartyBCDnumber: Reference field to 4.2.1.2.2 (criteria DP3) inserted.	
4.6.2.3.2	CallGap.Gap Indicators.Duration: Blank spece removed before "A duration of -2 ..."	
4.6.2.21	Reset timer IF. Subclause corrected to 4.6.2.21 (was 4.6.2.20)	
4.7.2.2	Reference field to 4.2.1.2.2 (criteria DP3) inserted.	
4.7.2.3	Reference field to 4.2.1.2.2 (criteria DP3) inserted.	
5.1.1	Reference field to 3.1 inserted.	
6.1.1	Reference field to 3.1 inserted.	
6.2.1	Reference fields to 6.4.2 (A/D SM), 6.4.3 (PDP SM), 6.4.4.1 (Scenario1) and 6.4.6 (Implicit disarm DPs) inserted.	
6.6.3.2.2	Reference fields to 6.3.1.1.1-6.3.1.1.5 (each element in GPRS-CSI) inserted.	
6.6.4.1	Reference field 4.6.8.1 (ISD ack) inserted.	
7.1.1	Reference field to 3.1 inserted.	
7.2	Reference field to 4.2 (CS DPs) inserted.	
7.4.1	Reference field to 4.4.1 inserted.	
7.6.3.2.2	Reference fields to 7.3.1.1-7.3.1.5 (each element in MO-SMS-CSI) inserted. Reference fields to 7.3.2.1-7.3.2.6 (each element in MT-SMS-CSI) inserted.	
7.6.6.1.1	"." soon after [33] deleted.	
11.1.1	"chapter" re-worded to "subclause"	
11.1.1	Reference field to 11.1 inserted.	

## 24 February 2002 as Draft V5D.13.3 (intermediate version after CN2 editorial clean-up meeting)

### Input proposal(s) for Release 5

TDoc #	Title	Editor's comment
N2-020205	Transferring the MS classmark & IMEI to the gsmSCF	
N2-020223	Handling of RNC and ENC operations in a CPH configuration	
N2-020224	Clause 4: editorial alignment of IE name with 23.018	
N2-020225	Clause 6: editorial alignment of IE name with 23.018	
N2-020226	Clause 11: editorial alignment of IE names with 23.018	
N2-020227	Clause 7: editorial alignment of IE name with 23.018	
N2-020230	Clause 4: Grammatical corrections to subclause 4.2	
N2-020231	Clause 4: Grammatical corrections to subclause 4.3	
N2-020232	Clause 4: Grammatical corrections to subclause 4.4	
N2-020233	Clause 4: Grammatical corrections to subclause 4.5	
N2-020234	Clause 4: Grammatical corrections to subclause 4.6	
N2-020237	Corrections to the clause 4 Circuit switched Call Control	
N2-020238	Corrections to the clause 6 GPRS interworking	
N2-020239	Corrections to the clause 9 Mobility Management	
N2-020248	Correction of LCS-related references	
N2-020249	Improvement TIF-CSI description	
N2-020250	Improvement gsmSCF list description	
N2-020251	Notes on editorial clean-up	
N2-020253	General remarks on 23.078	
N2-020254	Corrections to clause Forward	
N2-020255	Corrections to clause 1 Scope	
N2-020257	Corrections to clause 3 Definitions and abbreviations	
N2-020268	Clause 4: Grammatical corrections to N2-020223 (Charging Notifications)	
N2-020274	Clarifications on the usage of PSI	
N2-020278	Improvement for "Inter digit timeout" description for the Mid-Call event	

## Changes and reminders by the editor

Clauses	Change	Result by N2
	The editor provided N2-020251 which included 23.078 v5D.13.2. The meeting agreed to use this document as the base version for further process.	
General	See the meeting report in N2-020228 and the general drafting principles in N2-020281. The principle the editor has taken to update this draft document was "if one (editorial) action was agreed, the similar action was taken to other part for the consistency reason." The notes below describe some points which may not be mentioned in the report.	
	If information element is further (sub)element(s), "xxxx contains the following information element(s)" Information element, if referenced to a subclause or other specification, is described on the first line in the description column.	
	<ul style="list-style-type: none"> <li>- "information flow" abbreviated as "IF" in the subclause of the information flows, and full spelled in the other subclauses.</li> <li>- "information element(s)" abbreviated as "IE(s)" except "xxxxx contains the following information element(s):"</li> </ul>	
	The first letter of each word in the IE names, as mentioned in the report, modified to the capital letter. Exception was some IEs which are originally defined in other specifications.	
	"Message/Operation" were generally replaced by "information flow". No action was taken to "Int_ xxx_ xxx" and ISUP messages. Also explicit MAP message (11.3.2.1.2)	
	"Return" before a table cannot be deleted with the revision mark. It will be deleted when the clean version is created.	
	"FP" style found, changed to "TAH" for the table header and "normal" for others.	
N2-020205	Partly superseded by N2-020224, N2-020225, N2-020226 and N2-020227. Check needed as the proposal may interfere N2-020201 (Enhancements to subscriber information reporting in the PS domain). New subclause created under 11.2.3. Reference number corrected (ref to PSI ack SGSN->HLR).	
N2-020251	All the pending issues implemented as the comments off-line at the meeting, except on the hanging paragraph. Further changes were made as below; "Supplementary Services" -> "supplementary services"; "non-breaking hyphen" was inserted in; <ul style="list-style-type: none"> <li>- x-CSI;</li> <li>- O/T-BCSM;</li> <li>- A/B-party;</li> <li>- ITU-T.</li> </ul>	

## 26 February 2002 as Draft V5D.13.4 (to be submitted to CN#15)

### Changes and reminders by the editor

Clauses	Change	Result by N2
	The following changes were based on the editor's opinion and consensus by the members who attended the editorial clean up meeting.	
Clause 1	Scope three "this standard" changed to "the present document"	
Clause 4.5	Second paragraph: UNI "information flow" changed to "message".	
General	Int_xxx "message" changed to "signal", or "signal" is added if missing in the text (except title). This change was done only if it stated "Int_xxx" explicitly.	
General	ISUP xxx is added "messages" if missing in the end. This change was done only if it stated "ISUP xxx", where "xxx" is full message name, explicitly.	
General	Some ISUP messages found with an underscore "_", e.g. ISUP_Release. Each underscore was replaced by a white space.	
Error correction	11.3.4.1.2, Location Information For GPRS corrected the reference to 11.3.6.1.2. Date of the draft V5D.13.3 corrected to 24th February.	

## 07 March 2002 as Draft V5D.13.5 (after CN#15)

### Changes and reminders by the editor

Clauses	Change	Result by N2
	<b>27 February 2002 All the revisions for V5D.13.4 accepted, blank lines before tables and blank rows in tables deleted: Following changes done by the editor.</b>	
	Clause 1: Scope to recover "Provisioning of IP-based multimedia services". After this change, the document was submitted to CN#15 as NP-020057.	
07.03.01	(Draft) Version number modified to V5D.13.5, cover sheet indicated for CN2 internal use.	

## 19 April 2002 as Draft V5D.14.0 (N2#23 output)

N2-020449	Disconnect Leg during call establishment	4, SDL
N2-020450	CAMEL4 CSIs in ATSI operation	10
N2-020454	Collection of DTMF digits	4, SDL
N2-020456	Disconnect Leg operation for gsmSCF-initiated call leg	4, SDL

## Changes and reminders by the editor

Note #	Change	Result by N2
N2-020310	CAMEL_OCH_LEG1_MSC (sheet 4): Signal Int_Disconnect_Leg ack changed to be sent to gsmSSF.	
N2-020339	SDL UpdateSignalling: signal names contained "/", replaced by "or".	
N2-020386	Clause 1 modified as meeting agreed. Reference to 23.278 included in the clause 2.	
N2-020397	IE name "Suppress T-CSI" includes "non-breakable hyphone". Unchanged.	
N2-020429	Several subclause numbers and reference to specification deleted in the proposal. Not deleted.	
N2-020454	SDL CHECK_DIGIT_STRING_MSC inserted just after CAMEL_OCH_LEG1_MSC. New texts inserted as subclause 4.5.2.1.10, 4.5.4.1.3 CS_gsmSSF sheets 19 and 31: "signal to..." moved to new note boxes.	
N2-020456	New texts inserted as subclause 4.5.6.1.4.	
	CS_gsmSSF: Changes except the total number of sheets are on the sheets 2, 4, 6, 8 (new), 9, 11 (new), 12, 15, 16, 19, 27, 31 and 38.	
	CSA_gsmSSF: Changes except the total number of sheets are on the sheets 1, (old 3 deleted), 12, 15, 16, 17, 18 (new) and 19 (new).	
	Throughout the document, duplicated (double) white space found. One of them were deleted.	
	Table 4.4 and 4.5: white space inserted between "Leg" and "1" or "2" where applicable.	
	Table 4.5: a small "x" replaced by a capital "X".	
	IE name and column name corrected for the very bottom of Request Notification Charging.	
	4.6.2.22.1 (SCI) Note: duplicated "to the" deleted.	

## 28 April 2002 as Draft V5D.14.1 (revision of V5D.14.1)

### Changes and reminders by the editor

Note #	Change	Result by N2
	19 April 2002, All the revisions in the last version accepted.	
	Editor ran spelling check over the document. Some words (obvious errors) were corrected.	
	4.6.1.6.2 CAI Elements and Tarrif Switch Interval in e-values and Tsw included in NC and NP cases. This is a correction of the mis-implementation of N2-020223.	
	Process CAMEL_OCH_LEG2_MSC Sheet 1: The Int_MidCall signal corrected to "from the left (the gsmSSF)".	
	Subclause 4.5.4.1, the word "pary" corrected to "party".	
	Procedure CAMEL_ICH_LEG2_MSC Sheet 4: Signal "MidCall" and subsequent processing (including FFS note) removed.	
	Procedure CAMEL_ICH_LEG2_MSC Sheet 4: In the Wait_For_Clear or DP_T_MidCall_Active states, receipt of Int_Export_Leg or Int_MidCall lead to the State "-" corrected to "DP_T_MidCall_Active".	
	Process CAMEL_ICH_LEG1_MSC Sheet 3: In the Wait_For_Clear or DP_T_MidCall_Active states, also need to handle receipt of Int_MidCall from the gsmSSF causing a transition to the state DP_T_MidCall_Active.	
	Procedure CAMEL_MT_CF_LEG1_MSC Sheet 4: After receipt of Int_MidCall, branch to state DP_O_MidCall_Active was missing. Added as N2-020308.	
	Process CAMEL_MT_CF_LEG2_MSC Sheet 1: After Int_Disconnect_Leg, Release corrected to the right (destination exchange) and Int_Disconnect_Leg_ack to the left (gsmSSF).	
	Process CAMEL_MT_CF_LEG2_MSC Sheet 1: Int_MidCall corrected to from the left (gsmSSF).	
	Process CS_gsmSSF Sheet 4: After receipt of Int_Invoke_gsmSSF, corrected to transition to Wait_For_ICA state.	
	Process CS_gsmSSF Sheet 6: Receipt of Int_Initiate_Call_Attempt corrected to receive in Wait_For_ICA state.	
	Process CS_gsmSSF Sheet 12: Int_Cancel_MidCall is mis-spelling corrected.	
	Process CS_gsmSSF Sheet 27: After Event_Report_BCSM for Notify & Continue, Int_Cancel_MidCall corrected to to the left (MSC)	
	Process CS_gsmSSF Sheet 38: procedure after receiving Int_Release_CallSegment missing. Added as N2-020302.	
	Procedure CAMEL_CF_MSC_INIT (sheet 4) missing and sheet 3 was duplicated. Correct sheet from SDL file copied.	

## 22 May 2002 as Draft V5D.15.0 (N2#24 output)

### Input Change Requests (R99: approved by CN2#24)

TDoc #	spec	CR #	Rev	Cat	Title	Editor's comment
N2-020564	23.078	397	2	F	Clarifications on ATM-req/ATM-ack	10, SDL
N2-020567	23.078	405	1	A	Corrections to CTR and ETC Procedures	4, SDL

## Input proposal(s) for Release 5 (N2#24 output)

<b>TDoc #</b>	<b>Title</b>	<b>Editor's comment</b>
N2-020466	Introduction of Called Party Number for InitialDPSMS for MT-SMS	7
N2-020504	IMEI (with software version) replaces IMEISV	11
N2-020526	Handling of e-parameters for VT calls	4
N2-020535	Use of * and - in SDLs	4, SDL
N2-020538	Change Of Position DP and CPH	4, SDL
N2-020552	Handover trigger in the idle state in CS_gsmSSF	4, SDL
N2-020559	Introduction of Int_Error at MidCall DP	4, SDL
N2-020560	Inclusion of Continue With Argment in SDLs	4, SDL
N2-020571	CSI's in ATSI operation	10
N2-020595	Correction to section on "Audible indicators for call duration control"	4
N2-020606	Splitting of CAMEL phase 4	1, 4, 7, 9, 10, 11, SDL
N2-020607	Correction to Hand-over notification	4, SDL
N2-020609	Removal of references to GSM	1, 3, 4, 6, 9
N2-020610	Requesting the MS classmark	11
N2-020611	Change of "CAP" to "Int" in gsmSSF processes	4, SDL
N2-020613	Correction of Cg Party Number for InitialDPSMS	7
N2-020615	Initiate Call Attempt cannot create Leg ID 1	4
N2-020617	Corrections to Reconnect procedures	4, SDL
N2-020618	Application_Begin sent to CS_gsmSSF by CSA_gsmSSF	4, SDL
N2-020621	Refinement to the usage of "cause" for service triggering	4
N2-020623	Clarification of "primary" and "secondary" dialogues.	4

## Changes and reminders by the editor

Note #	Change	Result by N2
N2-020564	Status of the IEs changed to "S", as aligned to CSI (already "S").	
N2-020567	Further modified in other proposals.	
N2-020559	CAMEL_xxx_ETC: Addition of Int_Continue_With_Argument was not fully done, due to deletion of further procedure (refer to N2-020567). CAMEL_MT_MSC_ALERTING: Missing lines from the state DP_T_Call_Accepted to Connect and Int_Continue_With_Argument added. CAMEL_MT_CTR sheet 4 (in proposal) was done in sheet 5.	
N2-020560	Proposed addition also applied to CAMEL_ICA_MSC1.	
N2-020595	4.6.2.17.1: Wording change "section" to "subclause".	
N2-020606	Term "CAMEL4 Subset" in 1.1.x changed to "CAMEL phase 4 subset". Some ";" or ":" added at the end of the list. IE description "This IE shall be present ..." for "S" IE changed to "It shall be present ..."	
N2-020609	4.6.12.5.2 IE descriptions contained "GSM bearer capability" (2 places). Changed to "CS bearer capability".	
N2-020610	Description for Requested Domain IE: ":" and "." added for the list.	
N2-020611	CS_gsmSSF "Set Tssf to CAP_Reset_Timer time ..." found other than (proposed ) sheet 34. All changed to "Set Tssf to Int_Reset_Timer time ..."	
	Editorial corrections:	
	4.5.2.1 the list of the procedures, CAMEL_MO_Dialles_Services added. The appearing order of SDLs, CAMEL_OCH_MSC_INIT and CAMEL_MO_Dialles_Services, exchanged.	
	6.6.2.1.2 Activity Test GPRS: Below the IE table, an empty normal style paragraph inserted.	
	Some double space deleted.	

29 May 2002 as Draft V5D.15.1 (Revision of V5D.15.0)

Input Change Requests (R99: subject to email approval, May 23, 23:59 CET - Approved)

TDoc #	spec	CR #	Rev	Cat	Title	Editor's comment
N2-020619	23.078	408	2	F	Clarification of PDP ID for GPRS control	

Input proposal(s) for Release 5 (subject to email approval, May 23, 23:59 CET - Approved)

TDoc #	Title	Editor's comment
N2-020624	Move Leg and Split Leg Negative Response	

Note #	Change	Result by N2
	22 May 2002: All revision marks accepted. Following changes done by the editor.	
	According to drafting rule: <ul style="list-style-type: none"> <li>• 3GPP specification template, 3gpp_70.dot, included in this document.</li> <li>• Cover page "Rel-5" to "Release 5"</li> <li>• Tables 4.6 "Handling of SCI in the gsmSSF" header row style change TAC to TAH.</li> <li>• Figure 4.24b: Procedure CAMEL_OCH_CTR (sheet 2): Figure style to TH.</li> <li>• Figure 4.97pp: Process CS_gsmSSF (sheet 42): Figure and tile separated, title style to TF.</li> <li>• Tables 6.3 and 6.4 Implicit disarming: header row style change TAC to TAH.</li> </ul>	
	4.6.1.8.2: Empty paragraph above IE table deleted (no revision mark).	
	4.6.2.11.2: "The following information elements are required" deleted. (this looks messy, but it is all right if all the revision accepted.)	
	4.6.13.8.2: Empty paragraph at the end deleted.	
	8.4.1.1.2: Empty paragraph above IE table deleted (no revision mark).	
	10.3.2.2.2: Empty paragraph above CAMEL Subscription Information IE table deleted (no revision mark).	
	11.3.3.1.2: "-" added before "MS classmark information for the requested domain".	
	Error corrections:	
N2-020526	Table 4.7: Reference to the note 8 missing. Added (slightly modified).	
N2-020538	In CAMEL_O/T_Change_Of_Position_MSC procedures, the signals to/from box not correctly reflected. Note: the similar modification also applied to process CAMEL_Change_Of_Position_MSC.	
N2-020559	In CAMEL_ICH_LEG1_MSC Sheet 3, In the state DP_T_MidCall_Alerting, if Int_Error is received and the default call handling is Continue then it should transit to the state Wait_For_Answer.	
N2-020560	CAMEL_OCH_MSC1 sheet 1, the branch after Int_Continue_With_Argument was missing. CAMEL_CF_ETC sheet 1: should include receipt of Int_Continue_With_Argument in state DP_O_Abandon. CAMEL_ICA_MSC_ANSWER sheet 1: Int_Continue_With_Argument should be received from the left (gsmSSF) not the right.	
N2-020564	ATM_Modify_CB_Data sheet 1: "Call Barring Status" mis-spelled as "Call Barring State".	
N2-020571	Subclause 10.3.1.2.2: Text and IE name corrected: "Additional Requested CAMEL Subscription Info"	
N2-020606	CAMEL_Provide_Subscriber_Info: Bottom Result corrected to "Pass". Subclause 4.6.8.1: Supported CAMEL Phases: "V" added to "MSC" in the description. Subclause 9.4.1.1: Supported CAMEL Phases: "V" added to "MSC" in the description.	
N2-020607	Subclauses 4.5.2.1.12 and 4.5.4.1.5: "s" added to "The signal" at the beginning.	
N2-020609	Subclause 4.2.1.2.1: there's a spelling error "gemSCF" instead of "gsmSCF".	
N2-020611	CS_gsmSSF sheet 50: Should "Return appropriate error to the CSA_gsmSSF", not "... error to the gsmSCF".	
	MO_Dialled_Services procedure has been added to the list, but was spelt wrong. Corrected.	
	New inputs:	
N2-020619	Multiple occurrence of "PDP Id" replaced by "this IE". 6.6.2.10 Release GPRS: "... Session. In that case, the GPRS Session ...." replaced by "... Session, in which case the GPRS Session ...", and "... Context. In that case the indicated PDP Context ...." replaced by "... Context, in which case the indicated PDP Context ...."	
N2-020624	All the SDLs CS_gsmSSF and CSA_gsmSSF have been replaced by the new sheets due to increase of the sheets. Technical changes are only CS_gsmSSF sheet 56, CSA_gsmSSF sheets 13, 14 (new), 15 and 16 (new).
