1. Overall Description:

As mentioned in a previous LS, PTCRB has re-opened the NITZ RFT after issues were discovered with the test cases.

The test cases are quite extensive and in some aspects lack value. An issue with a test sequence will result in a downgrade of the test case status and nullify the additional test sequences of the test case.

It is suggested that test cases be added to cover the NI part as well as over the CS and PS domains. Below is a list of possible test cases that should be considered.

- NITZ information in MM only
- NITZ information in GMM only
- NITZ information in both MM and GMM
- Support of name: Long or short is used by device and from MM or GMM
- Confirm that the name received is stored in the device and used later
- Correct display and translation of the received time and time zone

2. Date of Next PTCRB Meetings:

PTCRB #47

February 19 – 22, 2007

Dallas, Texas
