

**TSG-RAN Meeting #7**  
**Madrid, Spain, 13 - 15 March 2000**

**RP-000010**

**(S5-000046, to TSG-RAN) LS on RAN-WG3 Document I3.05**

---

**To:** TSG-RAN WG3 and TSG-RAN  
**From:** TSG-SA WG5  
**Title:** Liaison Statement on RAN-WG3 Document I3.05 (Node B O&M Functional Description)

**SA5 contact for this LS:** John Mudge (tel: +44 1635 503 587)

---

During SA WG5 meeting #6 (31 August – 3 September 1999), a liaison was sent to RAN WG3 on the subject of the RAN WG3 internal report I3.05 (Node B O&M Functional Description). This liaison was assigned document number S5-99205, and treated during RAN WG3 meeting #7 (20-24 September 1999) as document number R3-99b22.

In this liaison SA WG5 encouraged RAN WG3 to transform I3.05 to a 3GPP report, since SA WG5 believed that the information contained within it is fundamental to a clear understanding of the O&M standardisation performed by RAN WG3 on the Iub interface. To date, SA WG5 have received no response to this request.

SA WG5 acknowledge that all working groups currently have a great deal of work in order to finalise the release 99 specifications, however SA WG5 maintain that the information contained within I3.05 is critical to a proper understanding of the UTRAN O&M functions in particular over the Iub interface. Since SA WG5 is responsible for the Telecom Management of the 3G system, this information is essential to guarantee consistency between the UTRAN and its management architecture. Raising the status of the I3.05 document will ensure that proper visibility of the document can be gained by SA WG5.

For the above reasons, SA WG5 would ask that TSG RAN encourage TSG-RAN WG3 to raise I3.05 to a 3GPP report.
