Title: Proposed handling of RAN WG3 open issues
Document for: Discussion
Agenda Item: 7

1. GENERAL

The following handling is the proposal from a discussion between WG chairmen on how to handle open issues from WG3.

Issues not in R99:

- Delayed activation at RL establishment (added functionality compared to currently existing)
- Support for TrFO on Iu
- Triggering of the Common Transport Channel Resources Initiation procedure (selection of S CCPCH) (RNSAP)
- U-RNTI reallocation over Iur
- DL power ramping

Issues to be completed in R99:

- CPCH support (NBAP)
- Possibility to perform soft handover during an active compressed mode pattern
- Support for positioning methods on Iur and Iub, basic (cell and RTT based).
 - Missing support on Iur to transfer mapping between UC-id and geographical area to SRNC
 - Missing support on Iur/Iub for the RTT measurements
- DSCH and USCH over Iur (RNSAP)
- DL power control behaviour in Node B, if needed for interoperability. Study by R1+R3.
- The other open issues reported in the status report are considered as essential corrections.
