Title: Proposed update to TR 25.926

Compressed mode in support of LCS related measurement

Document for: Decision

Several LCS techniques have been approved for inclusion in R'99. LCS should therefore be fully supported by the physical layer specification. However, the current text in 25.926 does not enable the UE to report the need for UL and/or DL compressed mode in support of LCS in general and GPS measurements in particular when this technique is supported in the UE.

The corrections proposed in the attached text proposal, together with CR 25.215-073 (R1-00-1108) would ensure that LCS techniques are fully and efficiently supported within the R'99 framework.

If and when the corresponding CR on 25.215 is approved, we propose to send the attached text update to TSG RAN WG2 for inclusion in their consolidated CR to TR 25.926.

4.9 Measurement related capabilities

Need for downlink compressed mode

Defines whether the UE needs compressed mode in the downlink in order to perform inter-frequency, ~~or~~ inter-RAT or LCS measurements. There are separate parameters for measurements on each UTRA mode, on each RAT, and in each frequency band as well as for LCS related measurements.

Need for uplink compressed mode

Defines whether the UE needs compressed mode in the uplink in order to perform inter-frequency, ~~or~~ inter-RAT or LCS measurements. There are separate parameters for measurements on each UTRA mode, on each RAT, and in each frequency band as well as for LCS related measurements.
