**Title: Liaison statement to RAN WG3 on CN Domain Identifiers used over the lu & lur interfaces**

TSG-N2 thank TSG-R3 for their liaison statement (TSGR3#5(99)784) on CN Domain Identifiers used over the lu & lur interfaces. We have noted the contents. The only issue which we have identified, on which we would be grateful for an answer from TSG-R3, is the structure of the LAC and RAC mentioned in the liaison statement. Can TSG-R3 confirm, please, that the LAC and RAC have the same structure as the identities defined in GSM 03.03, i.e. 2 octets fixed length and 1 octet fixed length respectively? The next N2 meeting is 13 – 17 September 1999
