TSG-RAN Working Group 3 meeting #6   **TSGR3#6(99)826**
Sophia-Antipolis, France 23 - 27 August 1999

Source: TSG-N3

To: TSG-S1, S2, R2, R3, N1
CC: TSG-S4, N2, T2

TSG-N3 would like to inform the addressed groups in 3GPP about the current status on its work on CS data services.

During the N3#4 meeting in Abiko, Japan, 14th-18th June 1999, the following was done:

- A WI sheet for CS data services was produced (Tdoc N3-99151)
- A rough architecture for CS data services was produced and a set of requirements for the IU CS UP and RLC were identified as well as a set of items for further study (Tdoc N3-99152)
- The feasibility of the provision of PIAFS was briefly studied concluding that this would be possible (Tdoc N3-99150)
- A WI sheet for PIAFS in UMTS was produced (Tdoc N3-99149)

The above mentioned Tdocs provide further details.

Although the CS data services WI is mainly under the responsibility of N3, we identify impacts on other groups:

- S2 to verify the proposed architecture
- R2 to take current and future requirments on the RLC into account
- R3 to take current and future requirements on the Iu CS UP into account
- N1 to provide the signalling means
