**Title: Response liaison on Clarification of RAB Sub Flows concept and associated definitions**

---

TSG SA WG2 thanks RAN WG3 for the response on Clarification of RAB Sub Flows concept and associated definitions (tdoc S2-99828).

S2 would like to inform R3 that the parameters controlling unequal protection for a RAB has been slightly modified in the latest version of TR23.907. There are three parameters that is possible to define per subflow:

- SDU error ratio
- Residual bit error ratio
- Delivery of erroneous SDUs

The new version (ver 2.0.0) of TR23.907 is attached.
