Title: Proposed LS on Uplink core network layer 3 message numbering

RAN WG2 would like to thank CN1 for their liaison statement on Uplink core network layer 3 message numbering, proposing to extend the current MSC mechanism so as to allow a longer window size for signaling messages.

On the question on whether it is feasible to use the proposed mechanism, it was felt that it is probably feasible, although a formal analysis was not made by lack of time.

RAN WG2 intends to complete its work on the necessary support by the UTRAN radio interface protocols of MSC signaling at its next meeting 5-8th of November 1999. RAN WG2 will work on the basis of the information provided in the LS from CN1, and will inform CN1 of the results of its work.
