Title: Structure modification of the 25.928

Document for: Information and discussion

Introduction

The original paper structure of the 25.928 is based on the old version documents about the physical layer description of the high chip rate TDD option. According to the latest version of these documents, some sections in 25.928 should be modified or omitted. Here are these sections.

The following sections of TR25.928 should be omitted compared with the latest version of TS 25.221: "Physical channels and mapping of transport channels onto physical channels (TDD)".

7.3.2.4 The Synchronisation Channel (SCH)

The following sections of TR25.928 should be omitted compared with the existing TS25.225: "Physical layer – Measurements (TDD)".

11.2.1.3 RSCP

11.2.1.9 Physical channel BER

11.2.2.6 Transport Channel BLER

Conclusion

It is proposed to omit the above listed sections from TR25.928.
