Title: Status of Work within SMG 6 and Transfer of Activities to 3GPP

Agenda:

Purpose: Discussion

Current activities in SMG 6 focus on GPRS Charging and GPRS O&M, GSM 12.11 (Fault Management of the BSS) and Charging of Phase 2 and Phase 2+ Services, such as HSCSD or CAMEL.

It is proposed that these activities stay within SMG 6 and continue their work as planned.

In addition, there is an active UMTS subgroup in SMG 6. This subgroup is currently studying how to organize their work on O&M for UMTS. In particular, an effort to standardize the IUB interface is under way.

It is proposed, that the UMTS subgroup WPA will transfer to 3GPP and continue to work under the umbrella of the appropriate TSG.
