Title: Review of 3GPP TS26.112 “Call Set-up Requirements for Circuit Switched Multimedia Telephony Service”, version 1.1.0
Document for: Information
Agenda Item: 4.1

3GPP TSG-CN WG1&3 Joint Meeting
Makuhari, Japan
13-17 September 1999

N3-99222

LS to: TSG SA WG4
From: TSG CN WG1 & WG3 joint meeting
CC: TSG SA, TSG CN, TSG CN WG2, and TSG SA WG2
Subject: Review of 3GPP TS26.112 “Call Set-up Requirements for Circuit Switched Multimedia Telephony Service”, version 1.1.0

TSG CN WG1 & WG3 would like to thank you for your LS (S4-99201) proposing that TSG-CN WG1 to take appropriate actions and responsibility to introduce the required modifications explained in 26.112 in 3GPP Release 99 call control specifications.

In our Joint meeting, in Makuhari – Japan, we came to the conclusion that 3GPP TS 26.112 includes some useful information which could be included in some matured specifications under TSG CN WG1 and WG3 responsibility:

- Section 4 will be transferred to 3GPP TS 24.008.
- Section 5 will be split between the following documents: 3GPP TS 27.001, TS29.007 and TS23.108. Bearer Capability enhancements will be dealt with in TS24.008.

However, it was indicated that further technical inputs are required to elaborate the technical specification of the Multimedia for 3G. A set of CRs is expected to include and enhance the actual content of the actual TS26.112 to the highlighted specifications.

Consequently, TSG CN WG1 & WG3 do not see the need to maintain any more the 3GPP TS 26.112.
