1. Overall Description

TSG-CN have noted the extensive exchange of liaison statements between CN WG4 and SA WG3 on the subject of positive authentication reporting for subscribers who roam from 3GPP2 networks to 3GPP networks.

TSG-CN have endorsed the view of CN WG4 that the treatment of positive authentication reporting for subscribers who roam from 3GPP2 networks to 3GPP networks should be handled only as part of a broader work item for the feature "Inter-system roaming between 3GPP and 3GPP2". The current project plan appears not to include such a work item.

2. Action

TSG CN ask TSG-SA to consider the generation of a work item for the feature "Inter-system roaming between 3GPP and 3GPP2". If TSG-SA decide not to generate such a work item, then CN WG4 will find it very difficult to progress the work on positive authentication reporting.
