Work plan for GERAN

1 Updated workplan

The document presents the latest revised work plan compiled at the GERAN #5 meeting. The work tasks for the different building blocks have been expanded and give a more detailed picture of what has to be done

Feature	Building block	Work task	Date of completion	New dates updated at TSG GERAN #5	Status
Evolution of transport (UTRAN Feature)	Evolution of transport in UTRAN and GERAN	Addition of transport mechanisms other than ATM for Iu <ul style="list-style-type: none">• Identification of alternative transports• Specification of those alternative transports	Dec 2001	Dec 2001	Ongoing
GERAN/UTRAN interface evolution 1 GP-000481	Evolution of Iu ps	<ul style="list-style-type: none">• Identification of GERAN requirements on Iu ps• Update of specifications	Jun 2001 (#5) Nov 2001 (#7)	August 2001 Dec 2001	Ongoing, impact due to TR optimized speech

TSG GERAN Report to TSG-SA#12

TSG-GERAN Convenor
Niels Peter Skov Andersen
Motorola

Tdoc SP-010376

TSG GERAN work area (1/2)

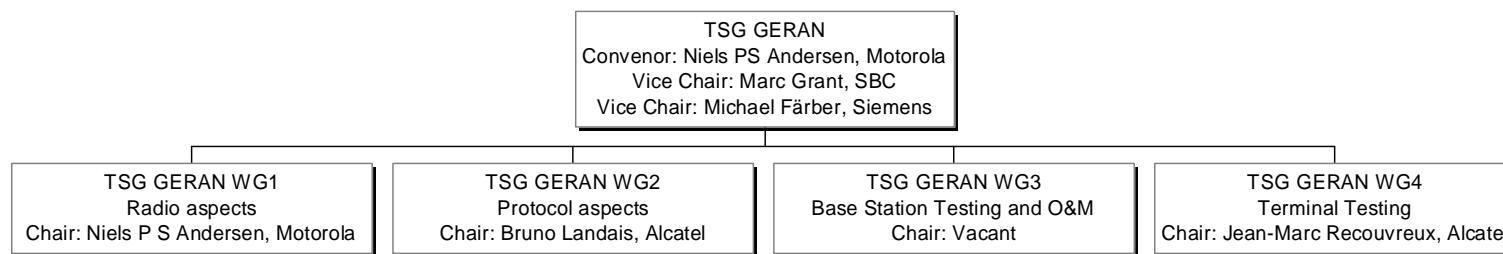

TSG GSM/EDGE Radio Access Network (TSG-GERAN)

- GERAN Radio aspects, and interfaces
- RF aspects of GERAN
- Specifications for GERAN radio performance and RF system aspects
- GERAN Radio Layer 1 specification
- GERAN Radio Layer 2 specification
- GERAN Radio Layer 3 RR specification

TSG GERAN work area (2/2)

- A interface specification, Gb interface specification
- Internal GERAN interface specifications such as Abis, and Ater (CCU-TRAU)
- Conformance test specifications for testing of all aspects of GERAN base stations
- Conformance test specifications for testing of all aspects of GERAN terminals
- GERAN specific O&M specifications for the nodes in the GERAN

Organisation of TSG GERAN (1/3)

Organisation of TSG GERAN (2/3)

TSG GERAN WG1 – Radio Aspects

Chairman: Niels Peter Skov Andersen, Motorola

- RF aspects of GERAN
- GERAN radio performance and RF system aspects
- Ater (CCU-TRAU)

TSG GERAN WG2 – Protocol Aspects

Chairman: Bruno Landais, Alcatel

- GERAN Radio Layer 2 specification
- GERAN Radio Layer 3 RR specification
- A interface specification, Gb interface specification
- Internal GERAN interface specifications such as Abis

Organisation of TSG GERAN (3/3)

TSG GERAN WG3 – Base Station Testing and O&M

Chairman: Vacant

- Conformance test specifications for testing of all aspects of GERAN base stations
- GERAN specific O&M specifications for the nodes in the GERAN

TSG GERAN WG4 – Terminal Testing

Chairman: Jean-Marc Recouvreux, Alcatel

- Conformance test specifications for testing of all aspects of GERAN terminals

- New DTM multislot classes agreed in Rel4
- Few BSSGP corrections
- Extended UL TBF : R4 feature
- Few GPRS and EGPRS corrections
- NACC - inter-BSC scenario :
 - desirable for Rel5
 - TR to capture the requirements and the solution,
 - Iu, Iurg, Inter-RAT scenarii to be further analysed
 - to be considered : errors scenarii, signalling load
- Other areas in GERAN of GPRS are stable for R97/R98/R99

- ASN.1 corrections agreed on R98 / R99 / Rel4
- Rel-5 :
 - first draft on 43.059 for LCS in GPRS (Gb mode)
 - first draft on 48.018 for LCS in GPRS (Gb mode)
 - first draft on LCS architecture for Iu
 - recommendation for ASN.1 extension
- The issue related to LCS Bearer and segmentation is now settled

Frequency bands – 3G–2G Interworking

- The incompatibility of ARFCNs between the 1800 MHz and 1900 MHz bands in relation multiband operation have been studied. A solution allowing any combination of multi-band operation to be used in the future has been agreed.
- To avoid saturation of the ARFCNs, a solution utilising Dynamic ARFCNs for new frequency bands have been elaborated
- GSM in the 850 MHz band has been made release independent.
- 3G – 2G interworking is considered stable. The remaining open issues related to "blind handovers" has been specified and the timing issues completed

Testing

- TSG GERAN realises the benefit of common Non-Access Stratum test, however merging of the related UTRAN and GERAN Test Cases is not thought to be practical, since the amount of work required to merge would be unmanageable. Instead a pragmatic solution on coordination of test cases has been proposed.
- TSG GERAN is still seeking support for TSG GERAN WG4 to draft test cases for the new(er) functionalities.
- TSG GERAN are looking at different possibilities for improving the information flow between the experts working on the core specification and the experts working on the test specification experts

Support for codecs

- Channel coding for 8 PSK voice bearers selected
- Support for WB-AMR completed except for call set-up and radio channel performance requirements
 - Service requirements felt unclear
 - GERAN wondering why TSG CN do not want to use bearer capability for set-up of WB-AMR calls as for other voice calls
- New principle for specification of performance for CS voice bearers based on required level to obtain fixed FER
- Still discussions ongoing on the impact of which codec are required to be supported when Iu interface is introduced

GERAN Release 5 (1/3)

- Principles for Mode selection between A/Gb and Iu agreed
- New identities similar to UTRAN identities defined
- Allowance for double LA/RA identities will be developed
- Information requiring broadcast being reviewed – Reuse of current BCCH might be too restrictive and new BCCH required
- Working assumption for RRC coding is CSN.1
- Paging concept requires further study
- No detailed work on RRC specification started

GERAN Release 5 (2/3)

- Technical Report on support of optimised voice being drafted
- Integrated VoIP application not requiring header regeneration assumed for Optimised Voice
- GERAN noted that consequence of IMS architecture with end to SIP negotiation is that the mobile negotiate and decides on codec and request appropriate bearer from the radio access network, and thus no possibilities for letting Radio Resource Management issues influence the choice
 - Functionalities similar to Half Rate - Full Rate preferred not possible. Generally GERAN have not received requirements for defined service fall backs in case of lack of capacity or capabilities (e.g. limitations to max bit rate due to distance from base station etc)

GERAN Release 5 (3/3)

- GERAN still missing information about SIP procedures – critical for time schedule for signalling bearers (FACCH and SACCH equivalents)
- GERAN regards SIP compression as necessary to obtain reasonable call set-up times
- After liaising with TSG SA WG3 it has been concluded that Integrity protection will not be applied at RLC/MAC level
- Work plan TSG GERAN updated (see attachment), GERAN IMS support by December 2002 not fully realistic

Lists of CR status at TSG-GERAN #04 & #05 are attached

Specification and version numbering

- Old specification numbers and version numbers are kept for Phase 1, Phase 2, Release 96, Release 97, Release 98, and Release 99
 - For Releases after Release 99 specification numbering to follow 3GPP format xx.yyy and version number aligned with other TSGs, e.g next release will be version 4.x.y.
 - New specification numbers to be derived from the old specification number
 - ab.cd=> (40+ab).0cd
- e.g
- 05.08 => 45.008

2 Concept papers

During the GERAN #5 meeting the additional need of concept papers have been identified. They are following the following three-part template:

- Identify requirements.,
- Recommend concept.

- Identify impact on specifications.

The following table lists the agreed concept papers (the new ones are marked yellow):

Concept paper	Responsible company
Multiple TBF or equivalent	Siemens
Paging	Lucent
Dedicated physical subchannels. Includes traffic and control channels	Nokia
How do we indicate Iu-mode support in a cell? How does the mobile station select mode? Broadcast message content?	Ericsson
SDU discard	Nokia
Impact of using RLC instead of LAPDm	Nokia
Contention resolution, mobile-station identity, and access	Alcatel
Ciphering and integrity protection	Nokia
PDCP support. Provide the same services as UTRAN RLC and MAC	Ericsson
Downlink delayed TBF release	Ericsson
Add transparent RLC	Lucent
Handover	Nokia
Iu rg	Vodafone
Codec renegotiation concept for GERAN	No volunteer yet
Support for ECSD channel coding in RLC/MAC	No volunteer yet
