Budapest**

**Social event Budapest 2022**

**Curious man?**

**Do you  
remember this  
place?**

**No comments**

**Best friends**

L.3 Establishment of UE-to-UE (UNU) QoS bearer with a single API call: 5G ACIA recognizes the need to provide the support for this purpose.

L.4 Monitoring of device connectivity, including the connection's QoS: SA6 has specified Network Resource Management service in 3GPP TS 23.434 which specifies procedures and APIs which can be used for this purpose.

L.6 Fine-grained authorization on the level of specific services and resources: SA6 has enabled CAPIF to support Resource Owner Aware Access to resources served by service APIs. The procedures and APIs which can be used for this purpose are specified in 3GPP TS 23.222 for which SA3 is currently working on the detailed security procedures.

SA6 kindly asks 5G ACIA to provide any feedback for the above aspects.

SA6 would like to share the information of the following specifications which support the applications for Factories of the Future and may be of interest to 5G ACIA:

1. Application layer support for Factories of the Future (FF) specified in 3GPP TS 23.545.
2. SEAL services.

a. Service Enabler Architecture Layer for Verticals (SEAL): Functional architecture and information flows

Page 1 of 2 00 weeks Accessibility Good to go

**Your last plenary (as TSG SA Chair)  
Rotterdam March 2023**

**Thank you Georg!**  
**Bisou Bisou 😊**
