

8 Home Environment Requirements on VHE

It shall be possible for the home environment to:

- Control access to services depending on the location of the user, and serving network.
- Control access to services on a per user basis.
- Control access to services depending on available service capabilities in the serving network, and terminals
- Manage service delivery based on for example end to end capabilities and/or user preferences
- Request version of specific services supported in serving network and terminal
- Request details (e.g. protocol versions and API versions) of available service capabilities supported in the serving network, and terminals.
- Define the scope for management of services by the user, for services provided by the HE.
- Handle charging for services (as defined in clause 11)
- Deploy services to users or groups of users
- Manage provision of services to users or groups of users
- Restore a users personal environment to a new terminal/USIM in the event of terminal change, upgrade or loss
- Be informed automatically of all changes to the capabilities of an active terminal (e.g. connecting a voice only terminal to a PC using a wireless connection may enable the “terminal” to accept video calls).
