

TSG-SA Working Group 1 (Services) meeting #2
Edinburgh, Scotland 9th-12th March 1999

TSGS1#2(99)163

Agenda Item: 9.2.3
Source: BT
Title: Support of service features and need for more detail.

Document for: Action

It is important to have a range of example services to which the VHE concept can be applied.

BT sees a need for more detail in terms of services and particularly service features in 22.05. Once the 22.05 services and service features are well defined then it is possible to identify the impact of them on VHE.

22.05 is still clearly stating the need for service features and these should be available for VHE support.

VHE should not prevent users having access to services offered by a serving network. e.g. in the case of roaming.

Service interaction must be considered in 22.05, and needs more development.

What will stage 2 requirements for VHE comprise?
