

**TSG-SA Working Group 1 (Services) meeting #2
Edinburgh, Scotland 9th-12th March 1999**

TSGS1#2(99)203

From: S1 (TSG_SA_WG1)

**Title: Liaison Statement to TSG-RAN on Accuracy of
Location Information**

TSG-SA WG1 recently discussed the need for accuracy of location information within 50m rather than FCC requirements (125 meters in 67 percent of all cases). WG1 still believes that accuracy within 50m is required, however WG1 would like to receive TSG-RAN's opinion as to whether or not this accuracy is likely to be achieved in Release 99. If this accuracy could not be achieved by functionality provided in UTRAN then WG1 would like TSG-RAN's views concerning the accuracy that is achievable for Release 99.
