Title:	New SIM toolkit feature: "Auto-answer & Mute-ringing"
Contact Person:	Jean-Francois Rubon Tel: +33 6 88 38 76 65
	mailto:jean-francois.rubon@gemplus.com

SMG9 reviewed at its Rome plenary meeting a proposal to have a new SIM Toolkit feature for R2000, called "Auto-Answer and mute ringing" : see attached doc 9-00-0039.

This feature would allow a SAT application to ask the mobile to disable "ringing" (alerting, in fact) when receiving a call, and to answer to it automatically. It would simplify the MMI in the case of a call-back service as the one which is described in Tdoc 9-00-0039.

Before commencing work on this feature, SMG9 would like to ask S1 for their comments regarding this new service requirement and S3 for their comments regarding potential privacy issues.

## Proposition of Auto-Answer and Mute-ringing STK feature

We are proposing to SMG9 to add an "Auto-Answer and Mute-ringing" functionality to the SIM Toolkit GSM 11.14 specification. The aim of these change requests is to allow the implementation of a seamless "World-Wide Prepaid" service that is network based but automated using SIM Toolkit. This service does not require special network capabilities (see figure 1 hereunder) and offers all the advantages of a network-based prepaid solution without the complexities of more traditional solutions.

### FIGURE 1 – WORLDWIDE PREPAID

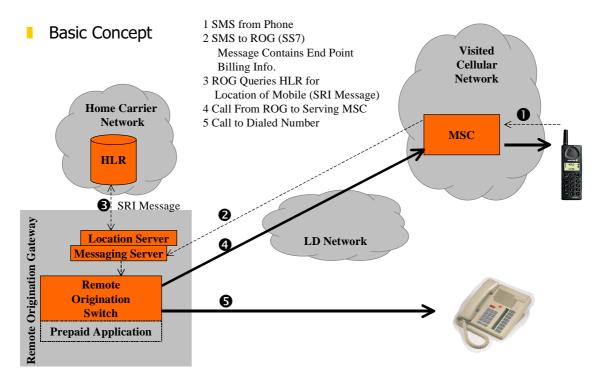

### Architecture - Worldwide Prepaid (WPP)

The functionality will also make possible the implementation of a "Home Carrier Control" service that will allow a home cellular carrier to control and route all traffic for its customers while they are roaming (see figure 2).

FIGURE 2 – HOME CARRIER CONTROL

## Architecture - Home Carrier Control (HCC)

Without this functionality, users of the "World-wide Prepaid" and "Home Carrier Control" services will be required to answer an incoming call after they have dialled a phone number in order to complete a call.

Please find the corresponding CR on GSM 11.14 in 9-99-0048 and GSM 11.11 in 9-99-0049
