Contact Person:	Andrew Allen, aallen@dynamicsoft.com
Attachments:	None

1. Overall Description:

SA2 is currently working on a number of IMS related work items for release 6 including the stage 2 for the Presence Service. Proposals have been presented in SA2 proposing the use of HTTP within IMS for various service related purposes. It has also been identified within SA2 that there are possible Security and Charging issues currently with the use of HTTP as part of the IMS.

SA2 has not yet identified within release 6 any particular use scenarios for HTTP however it is possible that such scenarios may be identified by SA2 in the future.

SA2 kindly asks SA3 and SA5 to comment on and investigate potential security and charging issues related to the use of HTTP within IMS for service related purposes (e.g for UE control of service provisioning and manipulation of service related data, etc).

2. Actions:

To SA3 Group:

SA2 kindly asks SA3 to comment on and investigate potential security issues related to the use of HTTP within IMS for service related purposes.

To SA5 Group:

SA2 kindly asks SA5 to comment on and investigate potential charging issues related to the use of HTTP within IMS for service related purposes.

3. Date of next SA2 Meetings:

SA2#27   October 14-18, 2002 (Beijing)

SA2#28   November 11-15, 2002 (Bangkok)
