Title: ATIS PTSC LAES Report
Document for: Information
Agenda Item: 5.7
Work Item / Release:

Abstract of the contribution: This document provides a brief report from the PTSC-LAES.

1. Administrative:

- PTSC LAES had two virtual meetings (November 28th, 2017 and January 9th, 2018) since SA3LI#67. The next virtual meeting will be held on February 20th, 2018.

2. ATIS-1000678.v4 updates

- From the previous reports (no change):
 - New message: CCEncryptionInfo to report the information needed for LEAs to decipher the CC when delivered in an encrypted form.
 - Change to the TerminalDisplay of NetworkSignal message to carry the extended name of calling party to the Intercept Subject's call when an incoming call is offered.
- New information (in this report):
 - A new message LocationReport was defined to report the location of the Intercept Subject.
 - The reason behind the addition of such a message was to address some scenarios where the Release was sent before the call was released (e.g. SIP BYE sent to the Intercept Subject triggering the Release message).
 - LEA's collection function may still receive the messages with a call identity that was released via a Release message.

3. ATIS-1000069.v2 updates

- The standard is first letter ballot review.
- The main change in v2 was to describe out-of-band notification need when the delivery of CII and CC were interrupted due to some sort of outage reasons.
- The out of notification could be via phone call, email, or text.
- Note that this is an informative standard.

4. PTSC LAES and WTSC LI merger

- Quiet.
