3GPP TSG SA WG 2 Meeting #12   S2-000562
Tokyo, Japan, 6.3.-9.3.2000

Source: QoS Drafting Group
Title: Release 2000 QoS Key Issues
Document for: Information

The following table lists the Release 2000 QoS key issues and the order of their consideration as defined by the QoS Drafting Group based on the QoS key issues as listed in S2-000279. This list will be taken into account for future drafting sessions.

Issue	Order of Consideration
Support for SGSN change, handover and SRNS relocation, both within GSM and 3G and between GSM and 3G, to satisfy the QoS requirements of realtime and non-realtime services.	B
End-to-end quality of service negotiations and provision (e.g. delay, bandwidth, etc.) between two terminals, of which one is a UMTS terminal. This includes interworking between non-UMTS QoS mechanisms (e.g. RSVP) and UMTS QoS mechanisms.	A
The applicability of non-UMTS QoS negotiation mechanisms (e.g. RSVP signalling) for UMTS.	A
Study a QoS policy framework for UMTS, such as user service QoS policies, intra- and inter-network QoS policies.	B
Interaction between CC (and comparable session signalling) and QoS negotiation.	A
Study the QoS requirements for carrying application and control signalling (e.g. CC/Multi-media signalling).	C
