At our February meeting in Goteborg, TSG SA2 discussed a contribution which proposed the adoption of the IETF AAA architecture as the architecture to be used for Authentication and Authorization in the IP Multimedia CN subsystem. The contribution further proposed that the Diameter protocol be used on the Cx interface for Authentication and Authorization operations.

While SA2 has adopted the principle of using IETF based architectures, procedures and protocols where possible for the IP Multimedia subsystem, we would like to ask SA3 to provide guidance with respect to the adoption of this specific architecture and protocol for this application.
