CN1 has discussed T3's questions regarding the storage of WLAN parameters in USIM.

CN1's opinion is that the following fields are needed in the USIM:

- Preferred WLAN identities (i.e. SSIDs): both operator and user preferred files
- Preferred WLAN PLMN identities: both operator and user preferred files
- Pseudonym, but we see that there is no need for a list

At the moment, CN1 does not see that there is a need to store in USIM the last registered SSID.

Additionally to these, re-authentication identity list may or may not need to be stored either on USIM or ME memory for power-off, power on situations, but CN1 does not know the requirements as they are up to SA3 to define.

4. Actions:

To T3 group.

ACTION: CN1 kindly asks T3 to consider the responses given above.

To SA3 group.

ACTION: CN1 kindly asks SA3 to give a response on whether there is a need to store the re-authentication identity in the USIM. And whether it should be a list or a single item.

3. Date of Next TSG-CN1 Meetings:

CN1_33	16th – 20th February 2004	Atlanta, USA (NA friends of 3GPP)
CN1_34	10th – 14th May 2004	Zagreb, Croatia (EF3)
