Title:	Proposed liaison statement on mechanisms for maintaining the Terminal Capabilities Report

Introduction

TSG T is aware of discussions in other 3GPP working groups relating to concerns about the work on and maintenance of the Terminal Capabilities Requirements (TCR) report. This liaison statement therefore, contains version 1.0.0 of the TCR, and proposes a mechanism to help ensure its continued alignment with the Core Specifications from which information in its annexes is taken.

Proposal

TSG T requests each working group to review version 1.0.0 of the TCR report (attached) paying close attention to the sections of the annexe(s) that relate(s) to its own core specifications, and to identify any inconsistencies between the TCR report and the working groups' own specifications. Each working group is then asked to send a Liaison Statement highlighting if and where changes are appropriate to the TCR. Thereafter, TSG T requests each working group to consider the impact of any subsequently agreed changes to the core specifications, on the contents of the related annex in the TCR report. i.e. please notify T2 SWG6 if there is a change to the section reference or essential requirement, not if there is a change to the text within a referenced section of the specification. If a working group does identify that an agreed change to one of its core specifications requires a change to the TCR report, that working group is requested to notify TSG T2 SWG6 of where and what changes are required to be made.

TSG T expects to agree version 3.0.0 of the TCR report for release '99, in its December meeting. TSG T2 intends to maintain the TCR report up to and including version 4.X.X for release 2000, at which time the situation regarding maintenance will be reviewed. TSG T will update the release version (3.X.X) of the TCR report at each T plenary meeting taking into account any required changes identified by other working

groups. TSG T will circulate the TCR report after each T plenary meeting, in order to facilitate the maintenance mechanism.
