Title: LS to T plenary: Confirmation of work items regarding USIM (UICC/ME interface) and Test SIM

Document for: Confirmation

---

TSG T WG1 would like to confirm if the following assumptions are consistent with TSG T level strategy.

1) USIM (UICC/ME interface)

The conformance testing for USIM (UICC/ME interface) would be developed by T WG3.

2) Test SIM

The contents of Test SIM information would be defined by T WG1. And Test SIM would be used for only conformance testing purpose.

3) Test SIM for conformance testing

T WG1 assumes that Test SIM is required to execute conformance testing for MS. If Test SIM is not installed, only limited tests can be executed. (What tests can be done: FFS)
