

## Work Item Description

### Title

Terminal Local Model Rel-5

#### 1                   **3GPP Work Area**

	Radio Access
	Core Network
X	Services

#### 2                   **Linked work items**

*MExE, USAT, SAT, USIM, SIM (T3, EP-SCP specific issues), Data Synchronisation, UE Management.*

#### 3                   **Justification**

The present rapid development of a diversity of new applications and application environments for mobile usage creates a complexity of previously unseen proportions that the Mobile Equipment has to handle. We are allowing third party software to run in various parts of the UE and we need a general framework to ensure that the APIs we create for the different UE-based toolkits work in harmony with each other

#### 4                   **Objective**

This work item will introduce a generic model approach for the ME environment; the purpose is *not* to categorise the applications / peripherals, but to try to structure the events that are external to, and has to be handled by, the ME Core Functions. This means that the structure or grouping of the events should be made from an *ME centric* perspective. The applications may be executed in the ME, in the peripherals, and/or in the UICC. Some applications that run on the UE side have counterparts in the network. This work item does not address the functions in the network. In addition, aspects of UE Functionality Split should be accommodated.

#### 5                   **Service Aspects**

*Service aspects will need to be in line with Service specifications from S1.*

#### 6                   **MMI-Aspects**

*MMI will need to be considered in terms of its interaction with ongoing resource allocations to other applications (e.g., data call set up by MExE can be cancelled by MMI)*

#### 7                   **Charging Aspects**

None

**8 Security Aspects**

*Security aspects of terminal local model will need to be analysed.*

**9 Impacts**

<b>Affects:</b>	<b>USIM</b>	<b>ME</b>	<b>AN</b>	<b>CN</b>	<b>Others</b>
<b>Yes</b>	X	X			
<b>No</b>			X		
<b>Don't know</b>				X	X

**10 Expected Output and Time scale (to be updated at each plenary)**

<b>New specifications</b>						
Spec No.	Title	Prime rsp. WG	2ndary rsp. WG(s)	Presented for information at plenary#	Approved at plenary#	Comments
<b>Affected existing specifications</b>						
Spec No.	CR	Subject		Approved at plenary#	Comments	
23.227				TSG#14		

**11 Work item rapporteurs**

Olga Tomé, Ericsson

**12 Work item leadership**

T2.

**13 Supporting Companies**

Ericsson, Motorola, Sierra Wireless, Siemens, Nokia, Mannesmann Mobilfunk, Vodafone, BT

**14 Classification of the WI (if known)**

	Feature (go to 14a)
X	Building Block (go to 14b)
	Work Task (go to 14c)

14b The WI is a Building Block: Parent Feature: Terminal Interfaces
