TSG-T3 thanks TSG-T2 for the liaison statement in T2-020300 (T3-020224).

T3 addressed the issues related to data inconsistency at the T3 plenary in February when the MMS support on the USIM was incorporated. As a consequence, T3 approved the CR on MMS as Rel-4 to TS 31.102. By having MMS support on the USIM for Rel-4 there would be no need for an MMS implementation with data stored in the ME, thus avoiding inconsistency of data between the ME and the USIM.

After reconsidering the issue T3 would like to emphasise the point that MMS should also be incorporated into the relevant T2 Rel-4 specifications rather than referencing the relevant T2 Rel-5 specifications from the T3 Rel-4 specification, as suggested in the LS from T2, T2-020264 (T3-020223).
