## CHANGE REQUEST

**34.108 CR 365** rev - Current version: **5.2.0**

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the symbols.

**Proposed change affects:** UICC apps ME  Radio Access Network Core Network

<b>Title:</b>	CR to 34.108 Rel-5:Correction to default value of Qrxlevmin	
<b>Source:</b>	Cetecom, MCC160, Rohde & Schwarz	
<b>Work item code:</b>	TEI	<b>Date:</b> 14/10/2004
<b>Category:</b>	<b>F</b>	<b>Release:</b> Rel-5
Use <u>one</u> of the following categories: <b>F</b> (correction) <b>A</b> (corresponds to a correction in an earlier release) <b>B</b> (addition of feature), <b>C</b> (functional modification of feature) <b>D</b> (editorial modification) Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a> . Use <u>one</u> of the following releases: 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) Rel-4 (Release 4) Rel-5 (Release 5) Rel-6 (Release 6)		

<b>Reason for change:</b>	The default value of Qrxlevmin used in tables 6.1.1 to 6.1.4 of TS 34.108 and the value applied in the TTCN are not consistent.
<b>Summary of change:</b>	The default value of Qrxlevmin in TS 34.108 is changed to align the prose to the TTCN.
<b>Consequences if not approved:</b>	Prose and TTCN were misaligned.

<b>Clauses affected:</b>	9.1.1

<input checked="" type="checkbox"/>	<input type="checkbox"/>												
<b>Other comments:</b>	Affects R99, Rel-4 and Rel-5. This CR aligns the prose to the TTCN. TTCN IE value is -40. IE value is TTCN IE value * 2 + 1.												

### How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be

downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.

- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

**Table 6.1.1: Default settings for a serving cell in a single cell environment**

Parameter	Unit	Cell 1
Cell type		Serving cell
UTRA RF Channel Number		Channel 1
Qqualmin	dB	-24
Qrxlevmin	dBm	<b>-84-79</b>
UE_TXPWR_MAX_RACH	dBm	21
CPICH Ec (see notes 1 and 2)	dBm/3.84 MHz	-60

NOTE 1: The power level is specified in terms of CPICH\_Ec instead of CPICH\_RSCP as RSCP is a receiver measurement and only CPICH\_Ec can be directly controlled by the SS.

NOTE 2: The cell fulfills TS 25.304, 5.2.3.1.2 and TS 25.133, 8.1.2.2.1.

UE_TXPWR_MAX_RACH	dBm	21	21	
CPICH Ec (see notes 1 and 2)	dBm/3.84 MHz	-60		-70

NOTE 1: The power level is specified in terms of CPICH\_Ec instead of CPICH\_RSCP as RSCP is a receiver measurement and only CPICH\_Ec can be directly controlled by the SS.

NOTE 2: Both cells fulfill TS 25.304, 5.2.3.1.2 and TS 25.133, 8.1.2.2.1.

**Table 6.1.3: Default settings for a non-suitable cell**

Parameter	Unit	Level
Qqualmin	dB	-24
Qrxlevmin	dBm	<b>-84-79</b>
UE_TXPWR_MAX_RACH	dBm	21
CPICH_Ec	dBm/3.84 MHz	-90

NOTE 1: The power level is specified in terms of CPICH\_Ec instead of CPICH\_RSCP as RSCP is a receiver measurement and only CPICH\_Ec can be directly controlled by the SS

NOTE 2: The cell is not suitable according to TS 25.304, 5.2.3.1.2

**Table 6.1.4: Default settings for a non-suitable "Off" cell**

Parameter	Unit	Level
Qqualmin	dB	-24
Qrxlevmin	dBm	<b>-84-79</b>
UE_TXPWR_MAX_RACH	dBm	21
CPICH_Ec	dBm/3.84 MHz	≤ -122

NOTE 1: The power level is specified in terms of CPICH\_Ec instead of CPICH\_RSCP as RSCP is a receiver measurement and only CPICH\_Ec can be directly controlled by the SS.

NOTE 2: The cell is not suitable according to TS 25.304, 5.2.3.1.2.

<b>Title:</b>	 CR to 34.108 Rel-5: Corrections of the values in 6.11.5.4 for LCR TDD	
<b>Source:</b>	 CATT/CCSA	
<b>Work item code:</b>	 LCR TDD	<b>Date:</b>  010/19/2004
<b>Category:</b>	 <b>F</b> Use <u>one</u> of the following categories: <b>F</b> (correction) <b>A</b> (corresponds to a correction in an earlier release) <b>B</b> (addition of feature), <b>C</b> (functional modification of feature) <b>D</b> (editorial modification)	<b>Release:</b>  Rel-5 Use <u>one</u> of the following releases: 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) Rel-4 (Release 4) Rel-5 (Release 5) Rel-6 (Release 6)
<b>Reason for change:</b>	1. In 6.11.5.4.1.23.1.2, 6.11.5.4.1.23c.1.2 and 6.11.5.4.1.23d.1.2, the values of iCodes and time slots/ radio frameí and iPuncturing Limití are not suitable for Interactive or background / UL:32 kbps / PS RAB. 2. In 6.11.5.4.1.23c.2.2 and 6.11.5.4.1.23d.2.2, the values of iCodes and time slots/ radio frameí and iPuncturing Limití are not suitable for Interactive or background / DL:32 kbps / PS RAB. 3. In 6.11.5.4.1.38g.1.2, the current value of éFCI code word / radio frameí for uplink is 16 and it is not suitable since in this case the TFCS size is 32. 4. In 6.11.5.4.1.38g.2.2, the current value of éFCI code word / radio frameí for downlink is 16 and it is not suitable since in this case the TFCS size is 36. 5. In 6.11.5.4.1.38h.1.2, the current value of éFCI code word / radio frameí for uplink is 16 and it is not suitable since in this case the TFCS size is 32. 6. In 6.11.5.4.1.38h.2.2, the current value of éFCI code word / radio frameí for downlink is 16 and it is not suitable since in this case the TFCS size is 32. 7. In 6.11.5.4.1.38i.1.2, the current value of éFCI code word / radio frameí for uplink is 16 and it is not suitable since in this case the TFCS size is 48. 8. In 6.11.5.4.1.38i.2.2, the current value of éFCI code word / radio frameí for downlink is 16 and it is not suitable since in this case the TFCS size is 60. 9. In 32.6.11.5.4.1.38j.2.2, the current value of éFCI code word / radio frameí for downlink is 16 and it is not suitable since in this case the TFCS size is 60.	
<b>Summary of change:</b>	1. In 6.11.5.4.1.23.1.2, 6.11.5.4.1.23c.1.2 and 6.11.5.4.1.23d.1.2, the value of iCodes and time slots/ radio frameí is changed to SF 4 from SF 2 and the value of iPuncturing Limití is changed to 0.48 from 1.0 (alt 0.92).	

2. In 6.11.5.4.1.23c.2.2 and 6.11.5.4.1.23d.2.2, the value of  $\ell$ Codes and time slots/ radio frame $\ell$  is changed to 4 codes from 8 codes and the value of  $\ell$ Puncturing Limit $\ell$  is changed to 0.48 from 1.0.
3. In 6.11.5.4.1.38g.1.2, the current value of  $\ell$ TFCI code word / radio frame $\ell$  for uplink is changed to 32 or 16 and the value of  $\ell$ Max. Number of data bits/radio frame $\ell$  is changed correspondingly.
4. In 6.11.5.4.1.38g.2.2, the current value of  $\ell$ TFCI code word / radio frame $\ell$  for downlink is changed to 32 and the value of  $\ell$ Max. Number of data bits/radio frame $\ell$  is changed correspondingly.
5. In 6.11.5.4.1.38h.1.2, the current value of  $\ell$ TFCI code word / radio frame $\ell$  for uplink is changed to 32 and the value of  $\ell$ Max. Number of data bits/radio frame $\ell$  is changed correspondingly.
6. In 6.11.5.4.1.38h.2.2, the current value of  $\ell$ TFCI code word / radio frame $\ell$  for downlink is changed to 32 and the value of  $\ell$ Max. Number of data bits/radio frame $\ell$  is changed correspondingly..
7. In 6.11.5.4.1.38i.1.2, the current value of  $\ell$ TFCI code word / radio frame $\ell$  for uplink is changed to 32 and the value of  $\ell$ Max. Number of data bits/radio frame $\ell$  is changed correspondingly.
8. In 6.11.5.4.1.38i.2.2, the current value of  $\ell$ TFCI code word / radio frame $\ell$  for downlink is changed to 32 and the value of  $\ell$ Max. Number of data bits/radio frame $\ell$  is changed correspondingly.
9. In 32.6.11.5.4.1.38j.2.2, the current value of  $\ell$ TFCI code word / radio frame $\ell$  for downlink is changed to 32 and the value of  $\ell$ Max. Number of data bits/radio frame $\ell$  is changed correspondingly.

**Consequences if not approved:**

The test case will not executed rightly for TDD.

**Clauses affected:**

6.11.5.4.1.23, 6.11.5.4.1.23c , 6.11.5.4.1.23d, 6.11.5.4.1.38g, 6.11.5.4.1.38h, 6.11.5.4.1.38i, 6.11.5.4.1.38j

**Other specs affected:**

	Other core specifications	
	Test specifications	
	O&M Specifications	

**Other comments:**

The CR is only connected with LCR TDD.

## CHANGE REQUEST

**34.108 CR 367** rev - Current version: **5.2.0**

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the symbols.

**Proposed change affects:** UICC apps ME  Radio Access Network Core Network

<b>Title:</b>	Alignment of Prose to TTCN for SCH power level	
<b>Source:</b>	Anite	
<b>Work item code:</b>	TEI	<b>Date:</b> 14/10/2004
<b>Category:</b>	<b>F</b>	<b>Release:</b> Rel-5
Use <u>one</u> of the following categories: <b>F</b> (correction) <b>A</b> (corresponds to a correction in an earlier release) <b>B</b> (addition of feature), <b>C</b> (functional modification of feature) <b>D</b> (editorial modification) Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a> . Use <u>one</u> of the following releases: 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) Rel-4 (Release 4) Rel-5 (Release 5) Rel-6 (Release 6)		

**Reason for change:** TS 34.108 "Table 6.1.5: Default power levels of physical channels relative to CPICH\_Ec"  
specifies that SCH\_Ec should be -2dB below CPICH\_Ec.  
However, in the TTCN SCH\_Ec is set to -5db below CPICH\_Ec.

**Summary of change:** In table 6.1.5 changed SCH\_Ec to -5dB.

**Consequences if not approved:** Inconsistency will remain between the TTCN implementation & prose specification in TS34.108.

### How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked contain pop-up help information about the field that they are closest to.

- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

Higher layer	RAB/Signalling RB	RAB
RLC	Logical channel type	DTCH
	RLC mode	AM
	Payload sizes, bit	320 (alt. 640)
	Max data rate, bps	depends on UE category NOTE1
	AMD PDU header, bit	16
MAC	MAC-d header, bit	0
	MAC multiplexing	N/A
	MAC-d PDU size, bit	336 (alt. 656)
	MAC-hs header fixed part, bit	21
Layer 1	TrCH type	HS-DSCH
	TTI	2 ms
	Coding type	TC
	CRC, bit	24

NOTE1: The peak throughput may be limited by the maximum number of MAC-d PDUs that can be included in a single MAC-hs PDU (see [25.321]).

## CHANGE REQUEST

**34.108 CR** 369 rev - Current version: **5.2.0**

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the symbols.

**Proposed change affects:** UICC apps ME  Radio Access Network Core Network

<b>Title:</b>	Correction to initial conditions and references in clause 7.3	
<b>Source:</b>	NEC, Racal Instruments Wireless Solutions	
<b>Work item code:</b>	TEI	<b>Date:</b> 21/10/2004
<b>Category:</b>	<b>F</b> Use <i>one</i> of the following categories: <b>F</b> (correction) <b>A</b> (corresponds to a correction in an earlier release) <b>B</b> (addition of feature), <b>C</b> (functional modification of feature) <b>D</b> (editorial modification) Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a> .	<b>Release:</b> Rel-5 Use <i>one</i> of the following releases: Ph2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) Rel-4 (Release 4) Rel-5 (Release 5) Rel-6 (Release 6) Rel-7 (Release 7)

<b>Reason for change:</b>	The number of cells listed under initial conditions is not correct for several test cases refering to sections 7.3.x. The references to TS 34.121 clause 6.8.x do only apply for the RX spurious emissions test case (6.8), but not for the other test cases using CELL_FACH state.
<b>Summary of change:</b>	Add references to TS 34.121 for the number of cells and parameters to be used in specific test cases. Remove references to specific test case in TS 34.121 (6.8).
<b>Consequences if not approved:</b>	Incorrect number of cells and parameters for specific test cases listed under initial conditions. Incorrect references to TS 34.121 clauses for several test cases.

<b>Clauses affected:</b>	7.3, 7.3.2, 7.3.3, 7.3.4, 7.3.5

### How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked [?] contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

## 7.3 Test procedures for RF test

Note: In general parameters defined for specific test cases in TS 34.121 [2] take priority over the default parameters defined in this specification.

### 7.3.1 UE Test States for RF testing

In this clause, the states of the UE for the test are defined.

	RRC	CC	MM	SM	GMM
State1	Power OFF	-----	null	detached	inactive
State2	CS Registered Idle Mode	idle	null	idle	inactive
State3	PS Registered Idle Mode	idle	null	detached	inactive
State4	Test Mode	connected	null	detached	inactive

### 7.3.2 Test procedure for TX, RX and Performance Requirement (without handover)

#### 7.3.2.1 Initial conditions

System Simulator

  - 1cell, default parameters.
- [other test cases using this test procedure:](#)
  - [Number of cells and parameters for specific tests are defined in TS 34.121 \[2\] and take priority over the default parameters.](#)

User Equipment

The UE shall initially be operated under normal RF test conditions if not otherwise stated in the initial conditions for the actual test case.

The Test-USIM shall be inserted.

The UE has a valid TMSI (CS) after the execution of the procedure described in 7.2.2.1

The UE has a valid P-TMSI (PS) after the execution of the procedure described in 7.2.2.2

#### 7.3.2.2 Definition of system information messages

The default system information messages specified in clause 6.1.0b are used with the following exceptions.

Periodic RA update timer	E0 (timer is deactivated)

### 7.3.4 Test procedure for Handover

Note: This test procedure is also used for some other test cases involving more than 1 cell.

### 7.3.4.1 Initial conditions

#### System Simulator

- Intra-frequency hard handover and soft handover case:
  - 2 cells, default parameters according to Cell 1 and Cell 2 in clause 6.1.4.
- Inter-frequency hard handover case:
  - 2 cells, default parameters according to Cell 1 and Cell 4 in clause 6.1.4.
- Inter-system handover UTRAN FDD to GSM case:
  - 2 cells, default parameters according to Cell 1 and Cell 9 in clause 6.1.4.
- [other test cases using this test procedure:](#)

<b>Reason for change:</b>	PS streaming services is an important feature of 3G networks. PS streaming services for such as streaming video clips of sport events require downlink rates of up to 128 kbps. Currently there is no test coverage of PS streaming and downlink rate of 128 kbps.

<b>Consequences if not approved:</b>	Lack of test coverage for streaming services requering downlink rates upto 128 kbps.

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked  contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

## 6.10 Reference Radio Bearer configurations used in Radio Bearer interoperability testing

The reference radio bearer configurations are typical configurations of the radio interface. This sub-set of the mandatory set of radio bearer configurations supported by the UE is intended to be used as test configurations for testing of the UE. The purpose of the reference radio bearer configurations is to ensure interoperability of UE's in different regions and networks.

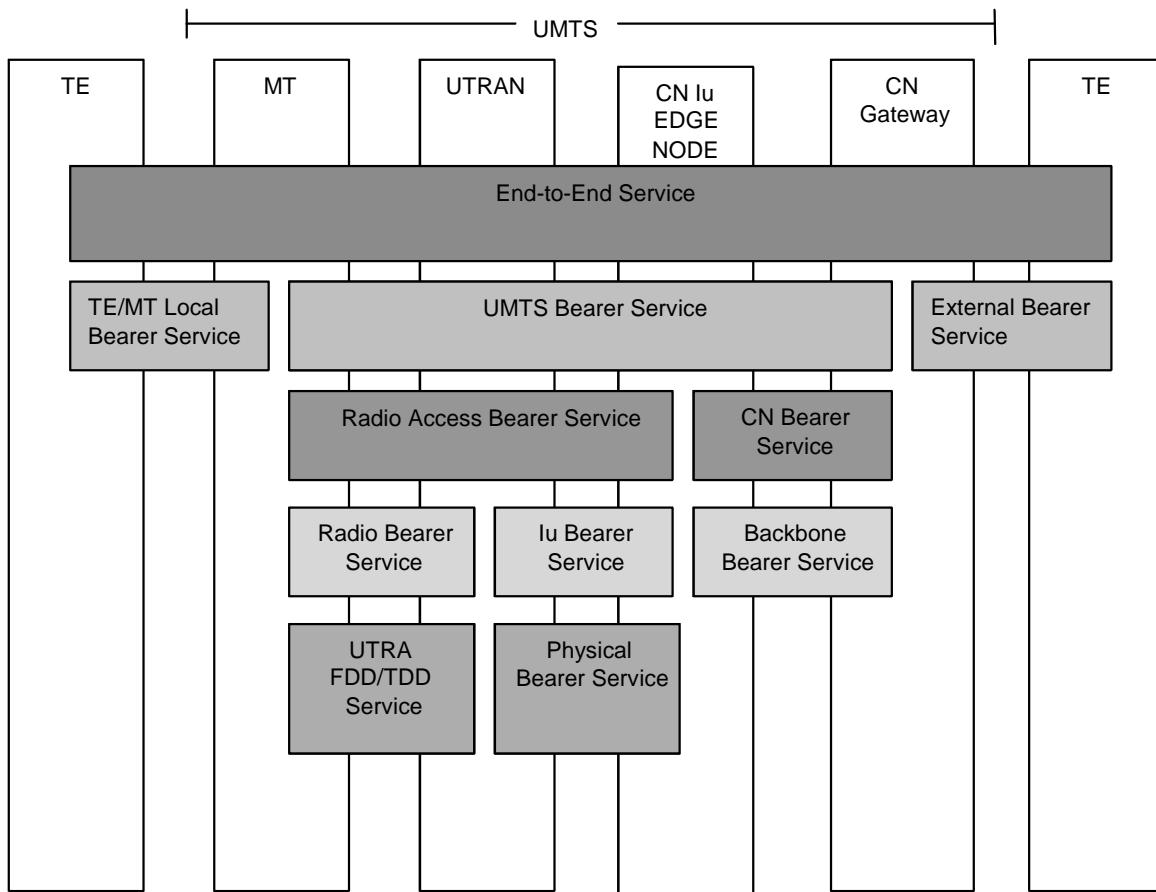

The reference radio bearer configurations are used in the radio bearer interoperability test cases, clause 14 of TS 34.123-1 [1]. The reference radio bearer configurations are also intended to be the first choice for other test cases where a radio bearer configuration is needed. For test cases requiring alternative configurations not provided by the reference radio bearer configurations then these specific radio bearer configurations are either specified in the actual test case itself; or in case the configurations are used by more than one test case then these common radio bearer configurations are specified in clause 6.11 of the present document.

**NOTE** If not specifically specified then the mid-value of the RM attribute value range as specified by the actual reference radio bearer configuration shall be applied for testing. However, in the case of UL and DL :3.4 kbps SRBs for DCCH and where the Choice «Same As UL» is used for the IE «DL Transport channel information common for all transport channels», the RM attribute for the «DL:3.4 kbps SRBs for DCCH» shall be set to the same value as that used in the Uplink.

### 6.10.1 QoS Architecture and RAB attributes

From a user point-of-view services are considered end-to-end, this means from a Terminal Equipment (TE) to another TE. An End-to-End Service may have a certain Quality of Service (QoS) which is provided for the user through the different networks. In UMTS, it is the UMTS Bearer Service that provides the requested QoS through the use of different QoS classes as defined in TS 23.107.

The UMTS Bearer Service consists of two parts, the Radio Access Bearer Service, RAB, and the Core Network Bearer Service. The Radio Access Bearer Service is realised by a Radio Bearer Service and an Iu-Bearer Service. The relationship between the services is illustrated in figure 6.10.1.1.

**Figure 6.10.1.1: UMTS QoS Architecture**

The Radio Access Bearer Service is characterised by a number of attributes such as Traffic class, Maximum bit rate, Guaranteed bit rate, SDU error ratio, Residual BER, Transfer Delay etc. As a first approach the four following attributes have been considered to come up with the parameter settings in clause 6.10.2.4 for FDD mode and 6.10.3.4 for TDD mode:

- Traffic class;
- SSD;
- Maximum bit rate;
- Residual BER.

The Traffic classes are explained in table 6.10.1.1. The Maximum bit rate has been considered at RLC layer and Physical Layer for the acknowledged and unacknowledged modes respectively. The Residual BER is understood as BER at RLC layer and Transport BLER for the acknowledged and unacknowledged modes respectively.

**NOTE:** The maximum bit rate in 6.10.2.4 for FDD mode and 6.10.3.4 for TDD mode is one of the RAB attribute as described above. For Interactive/Background PS RABs, however, the maximum bit rate of Radio Bearer can be lower than the maximum bit rate of RAB attributes due to radio resource management. Bit rates of Interactive/Background PS RABs described in 6.10.2.4 for FDD mode and 6.10.3.4 for TDD mode may represent the maximum bit rate of Radio Bearer taking account into this management.

## 6.10.2 RAB and signalling RB for FDD

### 6.10.2.1 RABs and signalling RBs

In the following clauses, the typical parameter sets are presented for reference RABs, signalling RBs and important combinations of them. The data rate given for each RAB is the maximum data rate that can be supported by that RAB.

NOTE: The granularity for each RAB needs to be clarified.

### How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked  contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.

- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

## 6 Reference System Configurations

This clause defines a number of Reference System Configurations which can be used for different tests.

### 6.1 Simulated network environments

The UE will eventually have to operate in either single mode networks (FDD or TDD), dual mode networks (FDD+TDD), or inter-RAT networks (FDD or TDD + GSM).

The following tables list the default parameters for 1 to 8 cell environments for testing.

To simplify TTCN implementation the total number of simultaneous cells in intra-frequency, inter-frequency and inter-RAT cell information lists (SIB11) have been limited to 8 and a specific cell numbering scheme have been defined to associate cell identifiers with type of cell.

- Cell 1, Cell 2, Cell 3, Cell 7, ~~and~~ Cell 8 and Cell 11 are associated with FDD/TDD cells using frequency f1;
- Cell 4, Cell 5 and Cell 6 are associated with FDD/TDD cells using frequency f2; and
- Cell 9 and Cell 10 are associated with GSM cells.

For protocol testing in FDD and TDD intra- and inter-frequency cell environment Cell 1 to Cell 8 are used.

For RF and RRM in FDD and TDD intra- and inter-frequency cell environment Cell 1 to Cell 8 and Cell 11 are used.

For FDD/GSM inter-RAT cell environment Cell 1 to Cell 6, Cell 9 and Cell 10 are used.

In this clause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

<b>Title:</b>	 Correction to generic Call Setup procedure for mobile terminating circuit switched calls	
<b>Source:</b>	 Anite	
<b>Work item code:</b>	 TEI	<b>Date:</b>  21/10/2004
<b>Category:</b>	 <b>F</b> <i>Use one of the following categories:</i> <b>F</b> (correction) <b>A</b> (corresponds to a correction in an earlier release) <b>B</b> (addition of feature), <b>C</b> (functional modification of feature) <b>D</b> (editorial modification) <i>Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a>.</i>	<b>Release:</b>  Rel-5 <i>Use one of the following releases:</i> 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) Rel-4 (Release 4) Rel-5 (Release 5) Rel-6 (Release 6)

<b>Reason for change:</b>  In the expected sequence shown for the generic Call Setup procedure for mobile terminating circuit switched calls, in section 7.2.3.1.3, ALERTING is expected only after the Radio Bearer Setup Message. This sequence maps to the case in which the iSignal information element is not sent in the SETUP message. This distinction is not clear in the current prose description.  This is as per <b>24.008, section 5.2.2.3.2:</b> "The call control entity of the mobile station having entered the "mobile terminating call confirmed" state, if the call is accepted at the called user side, the mobile station proceeds as described in 5.2.2.5. Otherwise, <b>if the signal information element was present in the SETUP message user alerting is initiated at the mobile station side;</b> if the signal information element was not present in the SETUP message, user alerting is initiated when an appropriate channel is available" Note: This CR aligns the Prose to the TTCN.
--

<b>Summary of change:</b>  The following note is added in the expected sequence for the SETUP message:  iThe Signal information element is not included in the SETUP message
<b>Consequences if not approved:</b>  Inconsistency will remain between TTCN implementation & Prose.

<b>Title:</b>	 CR to 34.108 Rel-5; Corrections to the default RADIO BEARER SETUP message for HSDPA	
<b>Source:</b>	 Ericsson, NTT DoCoMo	
<b>Work item code:</b>	 HSDPA	<b>Date:</b>  28/10/2004
<b>Category:</b>	 <b>F</b> <i>Use one of the following categories:</i> <b>F</b> (correction) <b>A</b> (corresponds to a correction in an earlier release) <b>B</b> (addition of feature), <b>C</b> (functional modification of feature) <b>D</b> (editorial modification) <i>Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a>.</i>	<b>Release:</b>  Rel-5 <i>Use one of the following releases:</i> 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) Rel-4 (Release 4) Rel-5 (Release 5) Rel-6 (Release 6)

<b>Reason for change:</b>  Currently we have two different sets of multiplexing options for the high-speed DTCH in the default RADIO BEARER SETUP message for HSDPA tests.  One set includes three multiplex options: DCH (UL) / HS-DSCH (DL) DCH (UL) / DCH (DL) RACH (UL) / FACH (DL) This set is currently the default when establishing the radio bearer from CELL_DCH state, reflected in condition A9.  The other set includes only one multiplex option: DCH (UL) / HS-DSCH (DL) This set is currently the default when establishing the radio bearer from CELL_FACH state (to CELL_DCH state) reflected in condition A10.  As being discussed between 3GPP T1 and 3GPP RAN2 (refer to the LS from RAN2, R2-041840), the configuration of i3 TrCHs <sup>i</sup> (DCH for DCCH, DCH for DTCH and HS-DSCH for DTCH) and i2 TrCHs <sup>i</sup> (DCH for DCCH and HS-DSCH for DTCH) should both be included for HSDPA tests. Here, i3 TrCHs <sup>i</sup> corresponds to the set of three multiplexing options (condition A9). i2 TrCHs <sup>i</sup> corresponds to the set of one multiplexing option (condition A10).  The two sets of multiplexing options should not necessarily be tied to from which state the radio bearer is established (CELL_DCH or CELL_FACH). For test coverage, both combinations of multiplexing option sets and states should be tested. This would mean that there is a need to use the set with one option also when establishing the radio bearer from CELL_DCH, and use the set with three
--

	options when establishing the radio bearer from CELL_FACH. However, the definitions of conditions A9 and A10 do not reflect that possibility.
<b>Summary of change:</b>	The definitions of conditions A9 and A10 in the default RADIO BEARER SETUP message are modified to allow a more flexible use of those conditions. A9 is defined for the case when three multiplexing options are configured. A10 is defined for the case when one multiplexing option is configured. To minimize the changes to the existing test cases, while still keeping the purpose of increasing test coverage, the current usage is still the default when not otherwise stated in the test cases.  The value of the IE «Scrambling code change» in «DL Information for each RL» has been corrected from «Not Needed» to «No code change».
<b>Consequences if not approved:</b>	Unnecessary limitations would exist of which type of multiplexing options that are tested for the high-speed DTCH.

<b>Clauses affected:</b>	9.1.1

### How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

### 9.1.1 Default RRC Message Contents (FDD)

Contents of RADIO BEARER SETUP message: AM or UM

Information Element	Condition	Value/remark	Version
Message Type	A1, A2, A3, A4, A5, A6, A7, A8, A11 , A9, A10		REL-5
RRC transaction identifier		Arbitrarily selects an integer between 0 and 3	
Integrity check info - message authentication code		SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.	
- RRC message sequence number		SS provides the value of this IE, from its internal counter.

## CHANGE REQUEST

 **34.108 CR 374**  rev  -  Current version: **5.2.0** 

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the  symbols.

**Proposed change affects:**  UICC apps   ME  Radio Access Network  Core Network 

<b>Title:</b>	 Physical layer multiplexing configuration in case of AMR and two PS RABs	
<b>Source:</b>	 Nokia, T-Mobile	
<b>Work item code:</b>	 TEI	<b>Date:</b>  1/112004
<b>Category:</b>	 <b>F</b>	<b>Release:</b>  Rel-5
Use <u>one</u> of the following categories: <b>F</b> (correction) <b>A</b> (corresponds to a correction in an earlier release) <b>B</b> (addition of feature), <b>C</b> (functional modification of feature) <b>D</b> (editorial modification)		
Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a> .		
Use <u>one</u> of the following releases: Ph2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) Rel-4 (Release 4) Rel-5 (Release 5) Rel-6 (Release 6) Rel-7 (Release 7)		

<b>Reason for change:</b>	 Currently there is no test case for physical channel multiplexing option of AMR and two PS RABs and SRBs.	
<b>Summary of change:</b>	 New test case Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:32 kbps / PS RAB + Interactive or background / UL:32 DL:32 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH with physical layer multiplexing introduced in the specifications	
<b>Consequences if not approved:</b>	 No testing coverage for physical channel multplexing option of AMR and two PS RABs and SRBs, which is possible configuration according the core specifications.

### How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked  contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

## 6.10.2 RAB and signalling RB for FDD

### 6.10.2.1 RABs and signalling RBs

In the following clauses, the typical parameter sets are presented for reference RABs, signalling RBs and important combinations of them. The data rate given for each RAB is the maximum data rate that can be supported by that RAB.

NOTE: The granularity for each RAB needs to be clarified.

Table 6.10.2.1.1: Prioritised RABs.

### 6.10.2.2 Combinations of RABs and Signalling RBs

In the present document, physical channel parameters for following combinations of RABs and signalling RBs on a CCTrCH are described.

NOTE: It is understood that for speech service the AMR mode may be operated asymmetrically for the uplink and downlink.

## CHANGE REQUEST

 **34.108 CR 375**  rev -  Current version: **5.2.0** 

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the  symbols.

**Proposed change affects:**  UICC apps  ME  Radio Access Network  Core Network

<b>Title:</b>	 Addition of new HSDPA RAB configurations	
<b>Source:</b>	 Vodafone, Qualcomm	
<b>Work item code:</b>	 HSDPA	<b>Date:</b>  19/08/2004
<b>Category:</b>	 <b>F</b>	<b>Release:</b>  Rel-5
Use <u>one</u> of the following categories: <b>F</b> (correction) <b>A</b> (corresponds to a correction in an earlier release) <b>B</b> (addition of feature), <b>C</b> (functional modification of feature) <b>D</b> (editorial modification) Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a> . Use <u>one</u> of the following releases: 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) Rel-4 (Release 4) Rel-5 (Release 5) Rel-6 (Release 6)		

**Reason for change:**  As per now, the UE conformance test specifications only cover the use of single PS RAB for HSDPA. There is not testing of multi-RABs.

**Summary of change:**  The following new radio bearer configurations are added:

- Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:384 DL:[Bit rate depending on the UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.
- Conversational / unknown / UL:64 DL:64 kbps / CS RAB + Interactive or background / UL:384 DL:[Bit rate depending on the UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.
- Interactive or background / UL:384 DL:[Bit rate depending on the UE category] / PS RAB + Interactive or background / UL:384 DL:[Bit rate depending on the UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

**Consequences if not approved:**  The use of multiple RABs is not covered for HSDPA.

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked  contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

6.10.2.4.5.1.2.1.1.1 MAC-d flow parameters for Interactive or background / DL: [max bit rate depending on UE category] / PS RAB

Higher layer	RAB/Signalling RB	RAB
RLC	Logical channel type	DTCH
	RLC mode	AM
	Payload sizes, bit	320 (alt. 640)
	Max data rate, bps	depends on UE category NOTE1
	AMD PDU header, bit	16
MAC	MAC-d header, bit	0
	MAC multiplexing	N/A
	MAC-d PDU size, bit	336 (alt. 656)
	MAC-hs header fixed part, bit	21
Layer 1	TrCH type	HS-DSCH
	TTI	2 ms
	Coding type	TC
	CRC, bit	24

NOTE1: The peak throughput may be limited by the maximum number of MAC-d PDUs that can be included in a single MAC-hs PDU (see [25.321]).

### How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.

- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

## 3 Definitions and abbreviations

### 3.1 Definitions

For the purposes of the present document, the terms and definitions given in [9], [10] and the following apply:

**Maximum average power:** average transmitter output power obtained over any specified time interval, including periods with no transmission, when the transmit time slots are at the maximum power setting

### 3.2 Abbreviations

For the purposes of the present document, the abbreviations given in [9], [10] and the following apply:

$I_{oc}$	The power spectral density of a band limited white noise source (simulating interference from other cells) as measured at the UE antenna connector.
AFC	Automatic Frequency Control
<u>A-GPS</u>	<a href="#">Assisted - Global Positioning System</a>
AM	Acknowledgement mode
ATT	Attenuator
BCCH	Broadcast Control Channel
CBS	Cell Broadcast Service
CC	Convolutional coding
CCCH	Common Control Channel
CCTrCH	Coded Composite Transport Channel
CS	Circuit switching
DCCH	Dedicated Control Channel
DL	Downlink
DPCH	Dedicated Physical Channel
DT	Direct transfer
DTCH	Dedicated Traffic Channel
FTM	File tunnelling mode

<u>GPS</u>	<a href="#">Global Positioning System</a>
<u>GSS</u>	<a href="#">GPS System Simulator</a>
HYB	Hybrid
NAS	Non-access stratum
OBW	Occupied Bandwidth
OCNS	Orthogonal Channel Noise Simulator, a mechanism used to simulate the users or control signals on the other orthogonal channels of a downlink.
PRACH	Physical Random Access Channel
PS	Packet switching
RAB	Radio Access Bearer
RB	Radio Bearer
RRC	Radio Resource Control (for sub-Layer of layer 3) but also Root-Raised Cosine (for Filter shape)
SCCPCH	Secondary Common Control Physical Channel
SMS	Short Message Service
SRB	Signalling RB
SS	System Simulator
SSD	Source statistics descriptor
TC	Turbo coding
<u>TLM</u>	<a href="#">TeLeMetry word. It contains an 8-bits preamble (10001011)</a>
TM	Transparent mode
<u>TOW</u>	<a href="#">Time Of Week</a>
<u>TTFF</u>	<a href="#">Time To First Fix</a>
UL	Uplink
UM	Unacknowledgement mode

## 10 A-GPS Assistance Data

### 10.1 General

This section defines the assistance data IEs which shall be available for use as specified in all A-GPS Performance test cases. The assistance data shall be given for all satellites visible in the tests. [Editor's note: this last statement conflicts with section 10.1.1]

The information elements are given with reference to 3GPP TS 25.331 [34], where the details are defined.

Clauses 10.2 and 10.3 list the assistance data IEs required for testing of UE-based mode, and clauses 10.4 and 10.5 list the assistance data available for testing of UE-assisted mode. Clause 10.6 lists the values of the fields.

The A-GPS minimum performance requirements are defined by assuming that all relevant and valid assistance data is received by the UE in order to perform GPS measurements and/or position calculation. This clause does not include nor consider delays occurring in the various signalling interfaces of the network.

#### 10.1.1 Satellite constellation

The satellite constellation shall consist of 24 satellites. Almanac assistance data shall be available for all these 24 satellites. At least 9 of the satellites shall be visible to the UE (that is above 15 degrees elevation with respect to the UE). Other assistance data shall be available for 9 of these visible satellites. In each test, signals are generated for only a sub-set of these satellites for which other assistance data is available. The number of satellites in this sub-set is specified in the test. The HDOP for the test shall be calculated using this sub-set of satellites. The selection of satellites for this sub-set shall be random and consistent with achieving the required HDOP for the test.

## 10.2 Information elements required for normal UE based testing

The following A-GPS assistance data IEs and fields shall be present for each test. Fields not specified shall not be present. The values of the fields are specified in clause 10.6.

Note: For every Test Instance in each TTFF test case, the GPS reference time shall be advanced so that, at the time the fix is made, it is at least 2 minutes later than the previous fix.

Note: For every Test Instance in each TTFF test case, the IE GPS TOW ms shall have a random offset, relative to GPS system time, within the allowed uncertainty of Coarse Time Assistance defined in [33]subclause 4.4. This offset value shall have a uniform random distribution.

Note: In addition, for every Fine Time Assistance Test Instance the IE UTRAN GPS timing of cell frames shall have a random offset, relative to the true value of the relationship between the two time references, within the allowed uncertainty of Fine Time Assistance defined in [33]subclause 4.4. This offset value shall have a uniform random distribution.

Note: For the Moving Scenario and Periodic Update Test Case the values of the IEs GPS TOW ms and IE UTRAN GPS timing of cell frames shall be set to the nominal values.

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.

- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

## 5 Reference Test Conditions

### 5.1 Test frequencies

The test frequencies are based the UMTS frequency bands defined in the core specifications.

To avoid interference with adjacent frequency bands the lowest test frequency (downlink and uplink) needs to be offset upwardly by at least 2,6 MHz since the channel's width is 5 MHz for FDD and 3.84 Mcps TDD option, and 0.8 MHz for 1.28 Mcps TDD option since the channel's width is 1.6 MHz. The raster spacing is 200KHz. Similarly the highest test frequency (downlink and uplink) needs to be offset downwardly by at least 2.6 MHz for FDD and 3.84 Mcps TDD option, and 0.8 MHz for 1.28 Mcps TDD option.

NOTE1: Additional regulations concerning interferences to frequency bands used by different systems may also exist. Those regulations are specific to the country where the test equipment is used and need to be taken into account if they require a higher offset than 2,6 MHz from the edge frequencies for FDD and 3.84 Mcps TDD option, and 0.8 MHz for 1.28 Mcps TDD option.

NOTE2: In Band VI, to avoid interference with adjacent frequency bands the lowest test frequency (downlink and uplink) needs to be offset upwardly by at least 2,5 MHz, highest test frequency (downlink and uplink) needs to be offset downwardly by at least 2,5 MHz from the edge frequencies since additional center frequencies are specified according to [11].

#### 5.1.1 FDD Mode Test frequencies

UTRA/FDD is designed to operate in one of three paired bands [11]. The reference test frequencies for the common test environment for each of the [4.5](#) operating bands are defined in the following tables:

##### 5.1.1.1 FDD reference test frequencies for Operating Band I

Test Frequency ID	UARFCN	Frequency of Uplink	UARFCN	Frequency of Downlink
Low Range	9 613	1 922.6 MHz	10 563	2 112.6 MHz
Mid Range	9 750	1 950.0 MHz	10 700	2 140.0 MHz
High Range	9 887	1 977.4 MHz	10 837	2 167.4 MHz

##### 5.1.1.2 FDD reference test frequencies for Operating Band II

Test Frequency ID	UARFCN	Frequency of Uplink	UARFCN	Frequency of Downlink
Low Range	9 263	1 852.6 MHz	9 663	1 932.6 MHz
Mid Range	9 400	1 880 MHz	9 800	1 960 MHz
High Range	9 537	1 907.4 MHz	9 937	1 987.4 MHz

##### 5.1.1.3 FDD reference test frequencies for Operating Band III

<b>Title:</b>	⌘ CR to TS34.108 Rel-5; Adding a new test condition for RADIO BEARER RELEASE Procedure (Revision of T1-041716).	
<b>Source:</b>	⌘ NTT DoCoMo	
<b>Work item code:</b>	⌘ TEI	<b>Date:</b> ⌘ 01/11/2004
<b>Category:</b>	⌘ <b>F</b> <i>Use one of the following categories:</i> <b>F</b> (correction) <b>A</b> (corresponds to a correction in an earlier release) <b>B</b> (addition of feature), <b>C</b> (functional modification of feature) <b>D</b> (editorial modification) Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a> .	<b>Release:</b> ⌘ Rel-5 <i>Use one of the following releases:</i> Ph2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) Rel-4 (Release 4) Rel-5 (Release 5) Rel-6 (Release 6) Rel-7 (Release 7)

<b>Reason for change:</b> ⌘	<ol style="list-style-type: none"> <li>1) The following condition is missing in the default RADIO BEARER RELEASE message;  Packet to CELL_FACH from CELL_DCH / HS-DSCH in PS</li> <li>2) In the current test spec, there are two different sets of multiplexing options for the high-speed DTCH in the default RADIO BEARER SETUP message for HSDPA tests. (Refer to the LS from RAN2, <a href="#">T1-041766</a>)  One set includes three multiplex options:  DCH (UL) / HS-DSCH (DL) DCH (UL) / DCH (DL) RACH (UL) / FACH (DL)  This set is currently the default when establishing the radio bearer from CELL_DCH state, reflected in condition A9 in the defalt RADIO BEARER SETUP message.  The other set includes only one multiplex option:  DCH (UL) / HS-DSCH (DL)  This set is currently the default when establishing the radio bearer from</li> </ol>
-----------------------------	--

CELL\_FACH state (to CELL\_DCH state) reflected in condition A10 in the default RADIO BEARER SETUP message.

The two sets of multiplexing options would be impacted not only on the establishing procedure, but also on the releasing procedure.

- If the UE uses three multiplexing options stated as A9 to establish PS bearer, it could delete two TrCHs (DCH, HS-DSCH for DTCH) when it releases PS bearer. This option is already covered in condition A9 of the default RADIO BEARER RELEASE message, but not defined clearly.
- If the UE uses one multiplexing option stated as A10 to establish PS bearer, it could delete only one TrCH (HS-DSCH for DTCH) when it releases PS bearer. This option is not covered and defined in the current conditions.

In the current test spec, there is no explanation about the multiplexing options for the default RADIO BEARER RELEASE message, we could not distinguish which configuration options should be used in RADIO BEARER RELEASE procedure. It is needed to make it clear.

#### **Summary of change:**

- 1) Adding a new condition iPacket to CELL\_FACH from CELL\_DCH / HS-DSCH in PS as A10 in the default message.
- 2) The definition of condition A9 in the default RADIO BEARER RELEASE message is modified to allow a more flexible use of those conditions. A9 is defined for the case when three multiplexing options are configured. A new condition A10 is defined not only for iPacket to CELL\_FACH from CELL\_DCH / HS-DSCH in PS but also for the case when one multiplexing option is configured.

#### **Consequences if not approved:**

- 1) There is no suitable test condition for RADIO BEARER RELEASE Procedure.
- 2) It affects on another new CR T1-041935. The proposal condition iPacket to CELL\_FACH from CELL\_DCH / HS-DSCH is referred in the CR.
- 3) It is unclear which configured options should be used in RADIO BEARER RELEASE procedure.

#### **How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked § contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be

downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.

- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

<b>Title:</b>	 Update of Reference Radio Bearer for Conversational / speech / UL:5.9 DL:5.9 kbps / CS RAB for DL SF=256

<b>Reason for change:</b>	Enhancements to the UMTS system capacity provided by the operation of the 5.9 codec require to be able to operate on more than 128 codes on the DL. This is not possible when operating a speech 5.9 RB with DL SF=128. As a result, the system would be artificially code limited. Using a SF of 256 in the DL removes that potential code limitation. Currently there is no test coverage of speech 5.9 RB with DL SF=128.
<b>Summary of change:</b>	Update of physical radio bearer parameter in section 6.10.2.4.1.9.2.2 for SF=256

## CHANGE REQUEST

⌘ 34.108 CR 380 ⌘ rev - ⌘ Current version: 5.2.0 ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

**Proposed change affects:** | UICC apps ⌘ | ME  Radio Access Network  Core Network ⌘

<b>Title:</b>	⌘ CR to 34.108: Correction to the maximum bit rate for HS-PDSCH	
<b>Source:</b>	⌘ Nortel Networks	
<b>Work item code:</b>	⌘ TEI	<b>Date:</b> ⌘ 15/09/2004
<b>Category:</b>	⌘ <b>F</b> <i>Use one of the following categories:</i> <b>F</b> (correction) <b>A</b> (corresponds to a correction in an earlier release) <b>B</b> (addition of feature), <b>C</b> (functional modification of feature) <b>D</b> (editorial modification)	<b>Release:</b> ⌘ Rel-5 <i>Use one of the following releases:</i> 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) Rel-4 (Release 4) Rel-5 (Release 5) Rel-6 (Release 6)
Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a> .		

**Reason for change:** ⌘ The maximum bit rate indicated in clause 6.10.2.4.5.1.2.2.21 (for HS-PDSCH) was calculated using the old maximum Transport Block size values. June 2003 CR068 (on TS25.306) modified the max TB size per UE category to align it to the values that can be signalled according to TS25.321, thus changing the maximum HS-PDSCH bit rate.

For information:

UE category	Old max TB size	New max TB size (from June 2003)
Category 1	7300	7298
Category 2	7300	7298
Category 3	7300	7298
Category 4	7300	7298
Category 5	7300	7298
Category 6	7300	7298

Category 10	28776	27952
Category 11	3650	3630
Category 12	3650	3630

**Summary of change:** ⌘ Maximum bit rate per UE category for HS-PDSCH is corrected.

**Consequences if** ⌘ Inconsistency between test specs and core specs.

#### How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked  contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request

- 1) In the Default content for RRC Connection Release message for Cell DCH state changed value for N308 from 2 to 1.
- 2) In the Default content for RRC Connection Setup message for Cell FACH state the following changes are made:
  - a) RB Identity for SRB 1 to 4 is added.
  - b) UM RB transmissionRLC\_Discard is set to timerBasedNoExplicit : dt50 for SRB 1
  - c) RLC size mode changed from Octet to Bit Mode.
  - d) iNumber of TBs and TTI List changed to a list with two entries.
  - e) Rate Matching Attribute set to 170.

## 9 Default Message Contents

### 9.1 Default Message Contents for Signalling

#### 9.1.1 Default RRC Message Contents (FDD)

This clause contains the default values of common messages, which unless indicated otherwise in specific clauses of TS 34.123-1, shall be transmitted and checked by the system simulator.

In order to permit stability in test implementations certain alternative values, although less desirable, shall be permitted for a limited transitional period. Such values are indicated below, and in TS 34.123-1, by the term 'Deprecated alternative value'. Normal document modification procedures will be used to remove, on a case by case basis, the permission to use such alternative values.

In this clause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements which are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).
