Title: Updated Work Item Progress Report
Agenda item: 6.1.5
Document for: Information

This document includes T1 work items endorsed by TSG-T1#26

T1-06

Version ~~2019,~~

T1 Work Item descriptions for Rel 4, Rel 5, Rel 6 and Release Independent

The following document contains all of the Work Item descriptions so far identified for TSG T1 releases 4, 5 and release independent items. The intention is that a single document will be more convenient for people to use and more easily referenced from the work plan.

The work items in the work plan are organised so that the conformance test aspects, related to each feature, are collected into a single building block. Each building block has the title 'Conformance Test Aspects –' followed by the title of the parent feature. The Work Tasks going into the Conformance Test Aspects building blocks then correspond to the other UE related work items under the parent feature.

Note: Building blocks are supported by TSG T1 collectively whereas the work tasks are required to have 4 supporting companies before they are approved by T1.

Work plan ID shown in *italics* refer to ID numbers in the T1 modified work plan and may change when added to the formal work plan.

The titles are colour coded to indicate the WI status.

Green: WI description approved

Blue: For approval by TSG T1/T

Yellow: WI drafted but not approved

Gray: WI closed, withdrawn or merged with another work item

Red: WI sheet not yet drafted

3. Justification

The core specifications are being updated and enhanced for release 4 and 5 (formerly release 2000) and therefore the test specifications must be updated to reflect these changes.

4. Objective

This work item is a building block used to collect together the conformance testing aspects related to a 3GPP feature. As such it does not require any work at this level and for this reason it is supported by TSG T1 and reported on by the T1 chairman.

All of the work of TSG T1 takes place in its subordinate Work Tasks.

The core specifications are being updated and enhanced for release 4 (formerly release 2000) and therefore the test specifications must be updated to reflect these changes.

4. Objective

The objective is to prepare a conformance test specification for the signalling layers L2 and L3. Low chip rate TDD shares many similarities with full rate TDD but inevitably there will be differences.

The RAN work tasks for low rate TDD include:-

- UE procedures in idle mode
- Interlayer procedures in connected mode
- Control plane protocol aspects
- User plane protocol aspects
- mobility aspects

4. Objective

This work item should provide the conformance test capability to verify that the radio access bearer support enhancements on the Uu interface are correctly implemented within the UE. These enhancements include the following RAN core specification changes:-

- Radio Access Bearer multiplexing in PDCP
- Support of unequal error protection over Uu
- Channel type switching for logical channels
 - Today it is only possible to switch all logical channels of one UE, not individual. For DSCH it would be much better to be able to switch single logical channels
- IP header removal as developed within GERAN

| TBD | T1-06_33 | S_WT | Completion of the Release 99 TCs for TDD |

* Relationship: P = Parent, F = Feature, BB = Building Block, S = Subordinate, R = Related

3. Justification

Because of the large number of changes to the core specifications for release 99, it was not possible to develop and optimise all aspects of the test specifications. This building block includes a number of work items to improve these release 99 test specifications.

This work in turn will be carried forward to improve release 4 and 5 test specifications.

4. Objective

This work item is a building block used to collect together the conformance testing aspects which are not directly related to a 3GPP feature. As such it does not require any work at this level and for this reason it is supported by TSG T1 and reported on by the T1 chairman.

All of the work of TSG T1 takes place in its subordinate Work Tasks.

* Relationship: P = Parent, F = Feature, BB = Building Block, S = Subordinate, R = Related

3. Justification

The current test specifications are designed to provide comprehensive testing of a UE against the core specification. At this stage (Rel 99) little consideration has been given to the practical issues of overall test time and the number of test cases required to provide an acceptable level of confidence.

4. Objective

The objective then is as follows:-

1. To investigate the typical test time of each test case
2. To investigate where test functionality overlaps from one test case to another
3. To recommend a minimum combination of test cases and test parameters that are consistent with proving conformance of the UE to the core specifications and to a high level of confidence

| 2461? | T1-06_34 | WT | Testing RAB support enhancements-Robust Header Compression |

* Relationship: P = Parent, F = Feature, BB = Building Block, S = Subordinate, R = Related

3. Justification

The core specifications are being updated and enhanced for release 4 (formerly release 2000) and therefore the test specifications must be updated to reflect these changes.

See LS from R2, R2-010760

TSG RAN WG2 would like to inform TSG-T WG1 that the Robust Header Compression (ROHC) protocol as standardised in the Internet Engineering Task Force (IETF) ROHC WG has been agreed by TSG RAN WG2 to be included in Release 4 of PDCP(TS 25.323).

ROHC has been part of the work item, "Radio Access Bearer Support Enhancements" and the results are captured in TR 25.844 v2.0.0. The corresponding CRs to include ROHC into the Release 4 of radio interface protocols have also been agreed in TSG RAN WG2.

The IETF standardisation process has a requirement for interoperability testing before an IETF protocol is made a permanent standard. However, TSG RAN WG2 would like to ask TSG-T WG1 if it is necessary to test the ROHC protocol in 3GPP if it already will be done in IETF. Should there be tests in 3GPP and/or co-operation from 3GPP with the IETF interoperability tests for ROHC?.

TSG RAN2 WG2 would like TSG-T WG1 to consider these questions when designing tests for Release 4 of PDCP.

4. Objective

This work item should provide the conformance test capability to verify that the radio access bearer support enhancements on the Uu interface are correctly implemented within the UE for Robust Header Compression (RoHC).

3 Justification

The study item on HSDPA was concluded in RAN WG#11 with recommendations on the techniques to be included in Rel-5. The core specifications were updated and enhanced for Rel-5 and therefore the test specifications must be updated to reflect these changes. This work item enables the conformance testing of HSDPA.

4 Objective

The technical objective of this work item is the conformance testing of HSDPA to prepare a conformance test specification for the signalling layer 2 and 3 aspects. Also prepare a conformance test specification for the various RF characteristics of the HSDPA feature as they impact the mobile station performance and the radio resource management aspects.

| TBD | T1-06_39 | WT | Testing of Extended RoHC |

* Relationship: P = Parent, F = Feature, BB = Building Block, S = Subordinate, R = Related

3. Justification

The core specifications are being updated and enhanced for release 4 (formerly release 2000) and therefore the test specifications must be updated to reflect these changes.

ROHC is designed for IP-based networks to be used in "cellular links" as in PS domain of 3GPP. Therefore ROHC is an essential part of PDCP Release 4. However, ROHC specification is a complex state/mode machine, which is subdivided in a framework specification part and in 4 profiles (RTP, UDP, ESP, uncompressed) described in detail in ROHC specification IETF RFC 3095. Since ROHC is optional but an essential for PDCP, ROHC conformance testing is proposed to be tested in terms of 3GPP.

See also WI. T1-06_34

4. Objective

This work item should provide extended conformance test capability to verify that Robust Header Compression (RoHC) as described in Specification IETF RFC 3095 and used in the PDCP layer description Release 4 is correctly implemented within the UE supporting RoHC.

* Relationship: P = Parent, F = Feature, BB = Building Block, S = Subordinate, R = Related

3. Justification

With the introduction of IMS as a release 5 feature it will be necessary to ensure that the UE can respond correctly to the call control commands. In addition new Radio Access Bearers will be need to support IMS and therefore the test specifications will need to reflect these enhancements

4. Objective

The objective of this work item is to develop signalling test cases that prove the correct operation of a Rel 5 UE when used with IMS. The test cases will ensure correct behaviour and the ability to support the IMS features and associated RABs.

This will result in changes to documents 34.108 and 34.123.

* Relationship: P = Parent, F = Feature, BB = Building Block, S = Subordinate, R = Related

3 Justification

RAN WG4 has agreed to provide minimum performance for A-GPS in TS 25.133. There is no active effort to pursue A-GPS performance test specification in TS 34.121. As a result, the location measurement reporting accuracy from different UE vendors could be different, which makes it difficult for a network operator to use these location reports to fulfil the service requirements for location clients.

4 Objective

The technical objective of this work item is the conformance testing of A-GPS to prepare a conformance test specification based on A-GPS minimum performance requirements for both UE based and UE assisted A-GPS.

WT_56. Terminal Conformance Specification of Radio Transmission and Reception for introduction in the UMTS-850 MHz Band

| 24007 | RP-030197 | P_BB | UMTS-850 |

* Relationship: P = Parent, F = Feature, BB = Building Block, S = Subordinate, R = Related

3. Justification

As for IMT-2000, spectrum was first identified by WARC-92. WRC 2000 extended the current IMT-2000 frequency allocation to include bands currently occupied with in the 850 MHz band. In addition, ITU-R Study group 8F has recently forwarded into the ITU approval process a revision to ITU-R Recommendation M. [1036-1]. This revision includes recognition of the WRC 2000 bands identified for IMT-2000, in particular the band range 806-960 MHz.

It is believed that GPRS/EDGE at 850MHz will eventually begin evolving into UMTS at UMTS-850 with in ITU Region 2. Therefore, the proponents of this work item believe that there is high possibility that IMT-2000 would be introduced ITU Region 2 in the near future.

4. Objective

The purpose of this work item is to:

4.1 — Alignment of Terminal Conformance Specification of UMTS-850 MHz FDD band to core specification.

The specific bands to be discussed are¹:

824 — 849 MHz: Up-link (UE transmit, Node B receive)

869 — 894 MHz: Down-link (Node B transmit, UE receive)

4.2 — Generate CR's to update the appropriate documents

4.3 — Any additional related issues.

¹ These uplink/downlink pairings are consistent with the revision of ITU-R M. [1036-1].

| 22004 | RAN | BB | Enhancement of the support of network sharing in the UTRAN |

* Relationship: P = Parent, F = Feature, BB = Building Block, S = Subordinate, R = Related

3. Justification

The core specifications are being updated and enhanced for Release 6 and therefore the test specifications must be updated to reflect these changes. Core specification updates for Network Sharing with UE impact are done in 23.122, 24.008, 25.331 and 25.304.

4. Objective

In release 6, new functionality is introduced within the WI on Network Sharing to enable network sharing partners to broadcast multiple PLMN identities on one UMTS carrier. The UE behaviour for PLMN selection, cell selection and reselection is modified to take multiple PLMN identities into account.

The objective of this WI is to specify conformance tests in TS 34.123-1 (and corresponding updates to 34.123-2 and 34.108 if necessary) covering the new UE mandatory functionality.

The following aspects need to be considered

- Automatic PLMN selection when multiple PLMN identities are broadcast on one carrier
- Manual PLMN selection when multiple PLMN identities are broadcast on one carrier
- Cell selection of a cell broadcasting multiple PLMN identities
- Cell reselection to a cell broadcasting multiple PLMN identities (both in idle mode and in connected mode)
- PLMN indication in RRC initial direct transfer message
- Forbidden list handling at LA/RA reject, when LAU/RAU is initiated in cell broadcasting multiple PLMN identities
- Usage of SIB18 (PLMN identity of neighbour cells) for neighbour cells with multiple PLMN identities

- [LA/RA update triggered by dedicated RRC signalling of PLMN identity, using the new Rel 6 RRC PLMN identity IE, overriding the old PLMN identity in the RRC “CN-information-info” IE](#)
